INTRODUCTION

Bartending or serving beverages behind a bar is a potent combination of art, science and technique to concoct the right drink and has now emerged as an important part of the hospitality industry and bartending is one of the most eclectic and engrossing careers in the hospitality industry. However in Indian society because of the earlier prevailing mindset, bartending is mostly considered as a B- grade profession. But when it comes to today's generation, they have their own definition of bartending revealing the real truth about this profession. Bartending offer you endless possibilities to travel and workaround the world to pay for your studies or to start a unique lifelong career.

ABOUT INDIA BARTENDER'S GUILD FOUNDATION

Founded on 26th January 2016 as a NGO organisation, IBG will focus on fostering and developing the beverage hospitality industry

Works to enable mixologists and make advancements in professional bartending.

We see ourselves as a global community with a huge potential for growth in hospitality and bartending. We want the community to see bartending as a honourable career choice.

Our dedicated team works with full devotion with our partners to enrich the career advancement of our members through peer-to-peer learning, expert advice and counselling, bartending projects, and fair competition.

IBG enriches this experience by organizing cocktail competitions, sponsoring networking seminars with globally recognized brand representatives, and cement relationships with the best and top-notch talents in cities all over India.

BAR MANUAL

A bar is along raised narrow table or bench designed for dispensing beer or other alcoholic drinks. Bar is a licensed retail business establishment that serves alcoholic beverages, such as beer, wine, liquor, cocktails, and other non alcoholic beverages such as mineral water and soft drinks. Bars often also sell snack foods such as crisps or peanuts, for consumption on their premises. Some types of bars, such as pubs, may also serve food from a restaurant menu.

PARTS OF BAR

Front Bar

The front bar is exactly what it sounds like – The front of the bar. This is the area where your guests will sit and sip their drinks. You want to make sure your guests have adequate space for their comfort

Back Bar

The back bar is the business area of your bar. It's where drinks are mixed and poured, and all your liquor, glassware, and other supplies are kept. You need enough room in the back bar to accommodate all the storage you need and to allow you ample space to move around. Ultimately, the back bar is about function over form. There are a few optional features you can add to your back bar for some

additional style and functionality.

Under Bar

With the under bar, it is all about function. This is the area underneath your bar, in the back bar area, where you can install sinks, drink refrigerators, kegs, or even microwaves for those tasty bar snacks. Much of your basic glassware and mixers also will be stored under here, so typical under bars feature shelving.

TYPES OF BAR

Hotel Bar

These are self-explanatory. Hotel bars accommodate visitors from all over the world, and they rarely have a theme attached to them. They may or may not have food (they usually do, however, at least have snacks).

Specialty Bar

Specialty bars usually center around a certain drink, such as a martini bar, or even something else that is unique, such as cigar bars. The latter are extremely popular because with all of the cities and towns outlawing smoking in various public places, they are the one place you can go and enjoy a nice cigar along with a glass of brandy or scotch.

Sports Bars

Sports bars are made for watching sports and drinking beer, sports bars usually have large television screens showing several football or baseball games, and when it comes to the playoffs, regardless of the sport, they are always extra crowded.

The High Concept Bar

Usually found only in bigger cities such as Los Angeles and New York City, high concept bars often have a special

theme that includes something very unique. These bars are great for business because they are often filled with tourists who have plenty of money to spend, and if you want an expensive thrill or feel like taking advantage of the newest trends in nightlife novelties, they are the place to go.

The Pub

They are very cozy and a great place for people to relax, but if they have a karaoke machine or a karaoke night, the clientele can be a little rowdier. Pubs have affordably priced food and drinks, including the greasy cheeseburgers that everyone loves, and you can either sit at the bar and flirt with the bartender or sit at a table and order your food and drinks.

Live Music Joints

These are not the fanciest bars around, but they do serve alcohol and have live music to boot. They are usually extremely crowded and can even smell a little funny, mainly because of the number of people found there on any given night.

Craft Cocktail Bar

The craft cocktail bar is a relatively new and exciting addition to the world of drinking establishments. Craft cocktails are typically made with small-batch liquor with locally sourced ingredients. These bars often have creative names for their mixed drinks that are playfully named after pop culture references or funs.

The vibe of a craft cocktail bar is often trendy and sophisticated, focusing on the drinks itself rather than the people drinking them.

Wine Bar

A wine bar is a perfect place for people who want to enjoy a good glass of wine without dealing with a crowded, noisy

bar. They usually have a large selection of wines from all over the world, as well as small plates of food to enjoy with your alcoholic drinks. Wine bars are often dimly lit and relaxing, perfect for winding down after a long day.

Pool bar

A pool bar is a bar...in a swimming pool! It is built in such away that the bartender and the equipment stays dry, but the patron can swim up to it and sit on a bar stool in the water, while chilling and being happy as he or she quenches their thirst.

Resto bar

A restaurant which serves alcoholic drinks and has characteristics of a bar or nightclub; a combined restaurant and bar.

Portable bar

A portable bar can really help transform a catering company into being able to create parties and events that people will remember for a long time to come. Having your portable bar on wheels which is able to be folded up means that the party goes wherever you want it to and it is not that difficult to move around. These portable bars don't take up all that much space when in use and even less space while being transported. They are great for, Birthday parties, Weddings, Pool parties, Office get-togethers, Functions or Graduations.

BAR TERMINOLOGIES

SPIRIT

Put simply, spirits are unsweetened distilled alcoholic beverages containing 40 percentage and above of ethyl alcohol. Vodka, Rum, Gin, tequila, brandy, whisky all are well known examples of spirits.

LIQUEUR/CORIDAL

A liqueur, or cordial, is a sweetened distilled spirit. Flavoured with a variety of fruits, nuts, herbs, and spices, as well as things like chocolate and coffee. Liqueurs contribute more flavour than alcohol to cocktails and mixed drinks.

ALCOHOL BY VOLUME (ABV)

ABV is a metric used to determine the alcohol content in an alcoholic beverage. The measurement shows what percentage of the beverage's total volume is pure alcohol.

PROOF

You'll find this word on some drink menus and on all bottle labels. Divide whatever number the proof is in half and you have the percentage alcohol content of the liquor. For example, a 100 proof liquor is 50% alcohol content.

IMFL

Indian-made foreign liquor (IMFL) is the official term used by governments, businesses and media in India to refer to all types of liquor manufactured in the country other than indigenous alcoholic beverages such as Feni, Toddy, Arrack and others. And Bottled in India (BII) is referred to spirits that are produced in foreign countries and imported to India in bulk quantities and bottled in an Excise Bonded Warehouse by the Importers and bottled in India

NEAT

The minimalist of drinks, a neat drink is as simple as it gets. It's not chilled prior or poured over ice. Your choice of alcohol simply is poured into a tumbler or shot glass.

STRAIGHT-UP

A straight-up drink is a liquor either shaken or stirred with ice prior to being served. The liquor is then strained and served without the ice. The result is a chilled and undiluted drink.

ON THE ROCKS

A drink on the rocks consists of a liquor poured over ice. The type of ice depends on the bar, but your drink is poured over the ice which slowly dilutes the alcohol.

"The rocks" = ice

OUNCE

In fluid ounce is equal to approximately 29.5735 milliliters', but in nutrition labelling, one fluid ounce is rounded to exactly 30 milliliter'

DASH

A few drops or a very small amount of an ingredient.

A SPLASH

The amount will change through opinions, an consensus seems to have been reached that a splash is under a quarter ounce. A splash of something (i.e. cranberry juice) is used to enhance flavour, not overpower.

SHOT

A unit of measure for alcohol, a shot is equal to 1.5 fluid oz. Double, triple, or quadruple it as you see fit.

LAST CALL

The last chance to order a final drink before the bar closes.

FREE POUR

This refers to making drinks without using a measured pour spout or jigger to measure.

FIZZ

A drink that is carbonated or emits small bubbles.

FROST

To dip a glass in water, drain it and place it inside a freezer to create an icy layer around the glass.

GARNISH

This is what is added to a drink after it has been mixed to boost its appearance and flavour.

MIXERS

These are non-alcoholic drinks that accompany alcoholic drinks.

RIM

This is the process of wetting the rim of a glass with lime and pressing it into a rim shot tin. salt Rimmer's are just perfect for this.

AROMA

Refers to smell of fragrance of a food, beverage, fruits, herbs, flower etc.

FLAVOUR

A combination of compounds and aromas from natural ingredients such as raspberry, vanilla, basil, etc.

TASTE

Any of our sensed characteristics including sweet, salty, bitter, sour, umami, and fat.

BURN THE ICE

Pouring hot water nto an ice binto melt the ice; usually because a glass has broken over the ice bin.

WELL DRINK

A well drink or rail drink is an alcoholic beverage served using the lower-cost liquors stored within easy reach of the bartender in the counter speed rail, speed rack, or speedwell.

In any given establishment, the rail/well liquors available may also be known as the "house pours", "house brands",

“house spirits”, “pour brands”, or “proprietary spirits”

CALL DRINK

A mixed drink for which one specifies (i.e., calls) the exact brand or brands of liquor to be used

SINGLE AND DOUBLE/SMALL OR LARGE

A “single” refers to one measure, and a “double” means two measures in the same glass. In the UK, measures of spirits such as Whiskey or vodka are normally served as 25ml measures, so a double would be 50ml. This may vary in other countries.

MISE – EN – PLACE

Mise en place is a French culinary phrase which means “putting in place”. It is the preparation of dishes and ingredients before the beginning of service.

APÉRÉTIF

These shot-sized alcoholic beverages are meant to be consumed prior to eating a meal. Their purpose is to stimulate hunger. They are not usually sweet liquor and stick to earthy flavours. A few examples of apéritifs are vermouth, Gin, and martinis.

DIGESTIF

As the name implies, a digestif is meant to help with digestion and is meant to be consumed after a meal. They tend to be heavier and sweeter than apéritifs. Though not usually consumed as so, Jagermeister, is a popular example of a digestif.

VIRGIN

It's all mixer and contains no alcohol of any kind.

BAR EQUIPMENTS

				
BOSTON SHAKER	STANDERD 3 PIECE	MUDDLER	BAR SPOON	MIXING GLASS
				
HAWTON STRAINER	DOUBLE STRAINER	JIGGER	POURER	BAR BLADE
				
WAITERS FRIEND	ICE SCOOPER	ICE BUCKET	ICE CRUSHER	GLASS RIMMER
				
CUTTING BOARD	ZESTER	PEELER	LEMON SQUICER	BAR CADDY

ESSENTIAL BAR TOOLS AND EQUIPMENTS

Your bar needs experienced bartenders who know how to professionally work behind the bar and provide customers with drinks that are consistent in quality and taste. To do this, bartenders require more than just the right liquor, mixes, and other ingredients that go into making drinks. They need the right tools as well to mix and serve drinks quickly and efficiently. With these essential bar tools and equipments, you're all set to provide your customers with great drinks while at the same time streamlining your bar operations.

1. COCKTAIL SHAKER

A well-equipped bar has one or more cocktail shakers to provide customers with the ideal shaken beverage. Ingredients are placed in the sealed stainless steel shaker, typically liquor, syrups, fruit juices, and ice. After vigorously shaking and mixing the drink, shakers allow for easy pouring into the customer's glass. Many varieties of shakers come with built-in strainers to separate the ice or other ingredients.

2. MUDDLER

A good muddler will bring out the aromatics of herbs, spices, and fruits so that their flavours are released and infused into the drink. Look for muddler that are long-handled and ergonomically designed for easy holding. The long handle keeps bartenders from hitting their hands on the sides of the glass or cocktail shaker, allowing them to mix drinks safely and efficiently. Muddler should also be durable and dishwasher safe.

3. BAR SPOON

Stirring is one way to mix a cocktail, such as Gin or Whiskey cocktail, gently mixing the distilled spirit to maintain a balance of favour.

For this bar spoons are essential, with their long twisted handles that make it easy to stir in a smooth circular motion. Bar spoons gently stir the ingredients to adjust the right dilution without breaking down the ice. They also help bartenders layer drinks, pouring a second liquor or mix down along the stem of the bar spoon to create a layered drink that's visually appealing.

4. COCKTAIL STRAINER

If your cocktail shaker doesn't come with a built-in strainer, you'll want a cocktail strainer. You'll need one of these to create cold ice-free drinks. The strainer is placed over the mouth of the shaker, with the small holes letting the drink pass through, leaving the ice in the shaker.

A common brand used by many bartenders is the Hawthorne strainer, which is made from stainless steel, is dishwasher safe, and fits most professional bar shakers.

5. JIGGER

To be sure your bartenders are measuring correctly and consistently, not just for taste but so they're not over pouring, your bar tool inventory needs to include a jigger. Choose jiggers of different sizes, from 5oz to 2oz.

6. BOTTLE OPENER

One tool that no bar can do without is a bottle opener. For beer on tap, you won't need a bottle opener, but you will for any bottled beer or other capped beverages. Consider using openers that are wall-mounted – they're fast to use and won't be misplaced behind the bar.

7. BAR MATS

Bartenders can prepare drinks on bar mats, which can prevent spills and protect the surface of the bar from wet glasses. Made from thick and heavy rubber, these mats provide drainage for any spilt drinks and are easy to pickup and empty into the sink.

8. SERVICE MAT

Much the same as bar mats, service mats are where bartenders place drinks that are ready to be delivered to customers by servers. The mats provide stability so there's less spillage, helping to reduce the cost of waste.

9. COCKTAIL POURER

Bottles without pourer increase your operating costs. Using measured pourers allows you to control and manage your liquor inventory and keep your bartenders from over pouring. Pourers are placed on top of bottles to pour out consistent and even shots of liquor and mixes.

10. CUTTING BOARD

To cut garnishes for cocktails, your bar will need at least one cutting board. Not only do cutting boards provide a hygienic and safe surface for cutting, but they also help protect the bar top and keep knives sharp. Choose one that's sturdy, durable, and anti-slip.

11. ICE BUCKET

A couple of ice buckets will come in handy if your bartender is working in the bar on the other side from where the ice machine is located. It can also double up as a wine cooler for chilling the wine.

12. ICE CRUSHER

Many cocktails call for crushed ice. Having an ice crusher behind the bar is the ideal way for bartenders to crush ice to the right consistency for your signature cocktails. Look for

one that's portable and doesn't take up much room behind the bar. Alternatively, you can buy crushed ice, however this can increase your bar's costs.

13. ICE MOULD KIT

Most of the time your ice maker is going to be adequate, but for some of your signature drinks, you can impress your patrons with ice cubes in different shapes. Use spherical for Bourbon and WWhiskey on the rocks or use a floral mold for cocktails.

14. JUICER

A citrus juicer is a mainstay for any bar. Nothing beats using freshly squeezed lemon, lime, or orange juice in your drinks. Use a hand-held juicer or invest in a larger, standing hand press juicer if you're creating a lot of juice based cocktails.

15. PEELER

For those cocktails that are embellished with a peel garnish you'll need a sharp and sturdy peeler. opt for one that has an extra wide carbon steel blade and an easy to hold slip free handle. It will make peeling any citrus fruit safe and easy.

16. RIMMER

If you're making margaritas and other drinks that require a rimmed glass edge, a Rimmer lets bartenders quickly create the perfect rim of salt or sugar. Choose one with multi trays, adding that burst of flavour to your cocktails.

17. ZEISTER

Although not the most-used tool behind the bar, some drinks such as a Dry Martini or a Cosmopolitan need a dusting of lemon or lime on top. A quick twist with a zester is all it takes for your bartenders to add that visual appeal and boost of flavour to drinks.

18. COCKTAIL RAIL

Also known as a speed rail, a cocktail rail is a metal rack that holds those liquors and mixers that are frequently used by your bartenders to prepare drinks. The rail can be attached to the side of the bar for quick access, so bartenders aren't spending their valuable time reaching for bottles they use a lot.

19. GLASS RACK

Space behind your bar is limited – so you need to do everything you can to make it efficient and safe for our bartenders to work. A glass rack, either hanging overhead or wall-mounted, can free up valuable space and keep glassware protected. Consider buying glass racks that complement the décor of your bar, such as metal for a modern look or classic oak for a more refined style.

20. GLASS WASHER

It may seem like a big investment, but you'll be glad you have one during your bar's peak times. A glasswasher is specifically designed for bar glasses, making it faster and easier to keep up with the demand for clean glasses. Submersible underwater in your bar sink, bar glass washers install in a breeze and don't require any additional plumbing.

GLASSWARES

			
HIGH BALL	TOM COLLIN	OLD FASHIONED	BRANDYBALLOON
			
RED WINE	WHITE WINE	CHAMPAGNE FLUTE	CHAMPAGNE TULIP
			
CHAMPAGNE SAUCER	BEER PILSNER	BEER MUG	MARTINI
			
MARGERITA	HURICANE GLASS	IRISH COFFE MUG	SHOT GLASS

ESSENTIAL BAR GLASSWARES

The bar is filled with an array of glassware and each style is used for certain drinks. Whether you want a tall, short, casual, or fancy cocktail, there's a glass to fulfill your need. Margaritas, Martinis, and Hot Cocktails have their own glasses, as do beer, wine, and specific liquors. For a well-stocked bar, a few are “must-have” styles, while others are just nice to have around.

1. COCKTAIL (OR MARTINI) GLASS

Cocktail glasses are used for drinks between 3 and 6 ounces that are most often served “up” without ice. This includes a variety of martini-style cocktails such as the Cosmopolitan and many classic cocktails, from the Manhattan to the Sidecar. Cocktail glasses are also a good alternative to Margarita glasses.

2. HIGHBALL AND COLLINS GLASS

Highball (or hi-ball) and Collins glasses are very similar to each other. They can be used interchangeably for tall drinks and hold the same volume, though that can be anywhere from 8 to 16 ounces.

Nearly identical in shape, it can be difficult to distinguish the difference:

- The Collins glass tends to be taller and narrower, more of a chimney shape.
- The highball is typically stouter and tops off at 10 ounces.

3. OLD FASHIONED GLASS

The old-fashioned glass is a short tumbler with a thick bottom. It's also called a “lowball” or “rocks” glass. Typically used for short mixed drinks—including the famous old-fashioned— that are serve n the rocks,” not every lowball cocktail requires ice.

Old-fashioned glasses hold between 6 and 8 ounces. They are also available as a double old-fashioned (or double rocks), holding up to 10 or 12 ounces. The smaller glasses are also used to serve a straight or neat pour of liquor—typically a dark spirit like WWhiskey.

4. SHOT GLASS

The shot glass is a very recognizable glass in the bar. They come in many styles, shapes, and sizes and are fun to collect. Any shot glass can hold straight shots and mixed shooters and take the place of a jigger when you need to measure drink ingredients. It is always good to have a few around just in case some break.

The average shot is 1½ ounces while a “short” or “pony” shot is just 1 ounce. Some shot glasses hold around 2 ounces.

5. MARGARITA GLASS

The Margarita glass is used primarily for serving Margaritas. The double-bowl is a fun and distinctive shape that works particularly well for frozen Margaritas. The wide rim makes it easy to add a salt or sugar rim.

Margarita glasses come in a variety of sizes, ranging anywhere from 6 to 20 ounces:

6. CHAMPAGNE GLASS

If you enjoy a Champagne cocktail every once in a while, then a set of Champagne glasses would be a nice investment. They come in a variety of shapes.

- Champagne Flute

This tall, thin glass has a tapered rim that is designed to keep the Champagne’s bubbles in the glass longer. Flutes typically hold between 7 and 11 ounces.

- Champagne Tulip

The Champagne Tulip is an elegantly styled glass as well. It has a longer stem and bowl of the flute but the rim flares

out instead of inside. This design will not trap bubbles, though it is a nice option for mixing Champagne and other sparkling wines.

- Champagne Saucer

The Champagne Saucer is also called a Coupe glass. With a flatter, rounder bowl, it is a more traditional glass design for serving sparkling wines. It holds around 6 to 8 ounces. Saucers are nice for serving straight Champagne to many guests.

7. BASIC WINE GLASSES

Wine glasses are complicated because there are a variety of shapes and many styles have been developed to showcase a particular style of wine. However, there are two basic wine glasses:

A white wine glass has a taller, narrower bowl that is more open at the rim. A red wineglass has a rounder, smaller bowl with a more tapered rim. Traditionally, wine glasses are stemmed, though stem less glasses are popular today. Just like cocktail glasses, the stem is designed to keep the wine at proper serving temperature without influence from the drinker's body heat.

Wine glasses have also grown in size over the years. They can hold anywhere between 8 and 22 ounces, though 5 ounces is a standard serving so they're not filled to the rim.

8. BEER GLASSES

Just like wine, beer has its own set of glassware and certain styles of beer are preferred in particular glasses. There are three glasses that almost any beer can be served in; they're used interchangeably and good for mixing beer drinks.

- Pint Glass

A basic pint glass is a tall, tapered glass with straight sides. They typically hold 16 ounces, which is enough room for a full bottle of beer and its foamy head. Pint glasses can be

chilled in the freezer and instantly bring warm beer down to a cold temperature suitable for drinking.

- Pilsner Glass

Pilsner glasses typically hold between 10 and 14 ounces. The fluted shape (which can be more or less exaggerated) is used most often for lagers, and almost exclusively when pouring a pilsner, and the wider rim allows for a good head.

- Beer Mug

Mugs are nice because you can hold onto your beer without warming it with your hands. The thick base also means they can handle a good hit on the bar top. Perfect for the average lager, frosted beer mugs are commonly used in bars.

The volume of a beer mug will vary greatly. Many will hold between 10 and 14 ounces; those with a thicker base barely hold 10 ounces.

9. TALL SPECIALITY COCKTAIL GLASSES

Bar glassware includes a few tall speciality styles that you will run across in cocktail recipes. Each is used for a specific style of drink. While they are not called for as often as the other glasses, they are useful if you are fond of any of these cocktails.

- Irish Coffee Glass

An Irish coffee glass is a footed glass with a handle. Used for hot drinks and, traditionally, an Irish coffee, it's a decorative substitute for an average mug. It's made with thick, heat-resistant glass and holds between 8 and 10 ounces.

- Hurricane Glass

The distinct pear-shaped curve of this glass is reminiscent of vintage hurricane lamps, which gave it its name. Typically holding between 10 and 12 ounces, it is used for the aptly named Hurricane cocktail and often for Pinna Coladas and other frozen drinks.

- Brandy Snifter

As the name implies, this glass is used for brandy, particularly when sipping it straight. Though it is a very large glass, only a standard pour of about 2 ounces goes inside. The idea behind the snifter is to allow the drinker to enjoy all of the aspects of brandy: Watch it swirl inside, notice its legs and colour, take in the aromas trapped in the bowl, and slowly take a sip.

- Short Speciality Cocktail Glasses

Though they are uncommon, there are a number of specialty pieces of short stemware used for certain cocktails and liqueurs.

- Cordial Glasses

These tiny glasses are a traditional way to sip cordials (or liqueurs) straight and are not very common today. They are dainty, holding just 2 to 3 ounces, and fun to collect if you enjoy vintage glassware.

PROPER HANDLING OF GLASSWARES

Glassware is an essential part of the presentation of a cocktail. It should be elegant, transparent, and sparkling clean. Glassware is an excellent insulator, which helps to maintain the preferred temperature of a drink (cold drinks cold and hot drinks hot). The glass is one of the most important elements in defining a drink's style. Care and attention are always recommended while handling and cleaning glasses. Caring for glassware in the correct way will increase their lifespan, and ensure your drinks are represented in the best possible way. Glasses that haven't been washed and dried correctly can retain unwanted odours and toxins that will affect your drinks.

USING GLASSWARE

- Avoid handling any part of the glass that might meet a person's mouth. Touching the rim or inside of the glass is a health code violation.
- Use stemmed glassware for all cocktails that are to be served without ice. This is so that the heat of your customer's hand does not warm their drink while they are drinking it.
- Never scoop ice with a glass; use either a nice scoop or ice tongs. If the glass breaks it will be impossible to find pieces of broken glass in the ice. If you do break a glass in or around the ice bin, empty the bin immediately and inform all other bartenders in the area. Next, pour buckets of hot water in the ice bin to accelerate the melting process. If you use this ice, then you're putting your customers at risk. No matter how far behind this will put you, it is better than the alternative.
- When pouring hot drinks, always preheat the glass with warm water
- Conversely, never put cold water or ice into warm or hot glasses. Glass doesn't agree to sudden changes in temperatures, therefore never add ice to a hot glass or hot liquid to a cold glass. The thermal shock may shatter the glass.
- Never use glasses in an oven, microwave, or freezer, unless they are specifically designed for this purpose
- Inspect the glass before adding ice or ingredients. Always use sparkling clean glassware. Check for chips, cleanliness, or any other contaminant.

COLLECTING GLASSWARE

- Never collect multiple glasses in one hand where they can encounter other glasses
- Never just push a glass to move it, always pick it up and

place it where you want it. Use the stem or the base to pick glasses up, meaning you not only avoid getting fingerprints on the top of the glass, but you're given more support to carry it

- Never stack a glass unless it has been specifically designed for stacking
- Use glass collection baskets where possible or individually place on anti-slip trays.

WASHING GLASSWARES

BY HAND

- Always wash new glasses before first use.
- Use a suitable detergent and warm water with a non-abrasive sponge or cloth.

IN A GLASSWASHER

- Use a dedicated machine for glassware; wash crockery and cutlery separately.
- Make sure to set the glass washer to a low temperature.
- Use a glass rack; never use a flatware rack or plate rack.

DRYING GLASSWARES

- Air dry glasses where possible - cloths can spread grease and dirt that can leave unwanted odors and toxins.
- After washing, leave glasses to dry in an upturned position.
- Once dry, use a soft dry glass cloth to remove watermarks - this retains the clarity of glassware.

STORING GLASSWARES

- Avoid the rims of glasses coming into contact with other glasses, especially Martini glasses and other glasses with wide rims.

- Use glass jacks for back of house storage - these compartmentalized boxes keep your glasses from coming into contact with anything else
- Use shelf liner on hard surfaces - these soft mats protect glasses from hard surfaces and provide the airflow for air drying

BREAKAGE AND SPILL

It's always better to be too cautious when handling glasses. If you drop a glass, don't try to catch it, let it fall. If a glass is dropped and it breaks, wear gloves, and use a broom, dustpan or damp cloth to pick up the pieces. Always be ready to clean the glass breakage; it is inevitable. Whenever anybody breaks a glass, make it your priority to get it cleaned up.

PREPARING GLASSWARE FOR COCKTAILS

Preparing the glassware properly is essential for enhancing a cocktail's presentation and taste. From chilling to garnishing the rim, well-prepared glassware elevates the drinking experience, ensuring the perfect balance of aesthetics and flavours.

TO CHILL A GLASS

Presentation is essential, and a pre chilled frosty glass straight from the freezer is the ideal way to serve your guests a cocktail, not to mention the best way to keep your drinks cold. Rinsing a glass in cold water and then chilling it in the freezer for an hour or so will give it that frosty patina. If you need a chilled glass pronto, the quickest way to get it is to fill the glass with cracked ice and club soda or cold water and let the glass chill while you're mixing the drinks. Toss out the ice, wipe out any excess water, and pour in

the drink. If you have fine crystals, chill it in the refrigerator or with the ice cube chilling method, to avoid cracking the glass.

RIMMING THE GLASS

Presentation is important, but thoughtfully rimming your cocktail is about more than good looks. That ring provides texture, colour, and contrasting flavours to canonical drinks like Margaritas, where a dose of salt on your glass offsets the sweet-and-sour concoction within.

Every rim is comprised of two or more components: Liquid and Solid.

Liquid

Water, juice, beer, or syrups are all perfectly suitable liquids to use for rimming your cocktail. If you don't have an option for anything other than water, be mindful that its flavour will come through in the final drink.

Solid

Salt is the most commonly used solid on a cocktail rim, but it's not the only garnish in town. You can use sugar, crushed candies, spices, herbs, or anything goes, as long as the flavours don't overpower your cocktail and they are palatable enough to be consumed straight.

PUT A RING ON IT.

The biggest mistake that everyone makes when making rims at home is you get the salt on the inside of the glass. Rimming only the outer portion of a glass is important because it keeps your garnish from falling into your cocktail and throwing off its flavour. To sidestep this gaffe, wet only the outside of your glass with a dampened paper towel. Or, for better adhesion, pour some of your preferred liquid into a shallow saucer. Lay your glass on its side in the saucer and roll the outer circumference of the glass in the liquid.

Next, put your chosen solid in a similarly shallow saucer and repeat the process with the moistened segment of your glass. If any errant salt flakes or solids fall into your glass in the process, give the interior a quick swipe with a clean napkin or a cloth.

BAR SET UP FOR EFFICIENT SERVICE

In the fast-paced environment of a bar it's vital to deliver smooth, quick and efficient service each and every time, while looking for opportunities to enhance your customer experience and derive sales. Speed often requires experience, with your movements eventually becoming the second nature, but being organized and efficient in the way that you work will also help with speed while keeping quality standards in place.

WORKSTATION ORGANISATION

Well-organized workstations are the key to serving customers quickly and efficiently, and the best bars will be visually appealing without slowing down the bartenders working behind them. While bar layouts vary from case to case, here are a few universal principles that you can follow to avoid delays and maximise customer satisfaction.

THE TWO-STEP RULE

As a bartender, the size of the space you're working in will have a huge impact on your speed and efficiency. Most bars have adopted a "two-step" design; all your essential equipment should be handy, so you never have to move more than a step or two away from your station. This can shave crucial seconds off service time during busy shifts, increasing both your sales and customer happiness.

The following items should always be within easy reach:

- **Napkins:** In the bar caddy, ready to use.
- **Glassware:** All popular types, within easy reach.
- **Ice:** Ice bucket on the bar or next to your glassware.
- **Spirits:** Fully-stocked on your back bar or speed rail.
- **Mixers:** A full selection, ready in the chiller and on the back bar.

Ideally, you should aim to have two workstations per till, each equipped with the required tools and ingredients. With everything at hand and always in its place, you'll have more time to add a little flair to your service and surprising your customers.

SPEED RACK SET UP

A good speed rack allows you to serve frequently ordered drinks more quickly and efficiently, reducing the wait time and increasing customer happiness. This makes your guests more likely to return for second and third rounds, generating more sales and more money in the tip jar.

The speed rack is normally located under the bar, in front of the ice bucket at roughly knee-height for easy access. It holds the most frequently used liquors such as RRum, Vodka and GGin. When using a hi-double rack, the top shelf should be used for in house pouring brands and the lower shelf for any popular high-end brands you need at hand. By setting up your liquids in a particular order and

memorising their location, you gradually develop muscle memory which improves your speed and accuracy.

BACK BAR ORGANISATION

Your back bar should be able to both showcase your produce and be easily navigable, so that you can find ingredients quickly. When setting up your back bar, consider the following:

Be realistic about the space: Many bartenders and bar managers tend to overlook the limitations of their back bar; cramming in extra bottles and produce which affects the overall appearance and functionality. Bottles should never be positioned behind one another at the same level and extra space should be left around premium products wherever possible, to showcase them. Designate places for temporary items, such as promotional or seasonal produce, as this will give some flexibility without compromising your bar's layout.

Organize by spirit: Allocate sections according to the main spirit classifications: Vodka, Rum, GGIN, Tequila, Liqueurs, Brandy and Whisky. Premium products should be showcased on a designated "top shelf". Avoid placing lower-end brands in this area as this will detract from the high-end image. This will not only keep the bar organized and efficient for employees but will also enable customers to quickly and easily identify your products.

Muscle memory: When each product has a set place, you will eventually develop muscle memory, locating bottles instinctively almost without looking and improving the speed and accuracy of the service. Staff is more likely to follow a layout which they have helped in creating, so ask bartenders for their input early on and be sure to alert everyone to the new arrangement. Although it is time consuming, labeling each section on your back bar is a great way to establish permanence.

BAR HYGEINE AND SAFETY

Foodborne illnesses usually occur due to the transferring of harmful bacterias between people, food, surfaces and equipments. This is known as cross-contamination, and it is one of the most common causes of food poisoning. For a lot people , the bar is a safe zone. They should be cleaned properly, avoiding the bacterial contamination, while maintaing the genral food safety. But this is equally difficult because the risks in the bar is much the same as in the kitchen. Because the bar handles dairy in the form of milk and cream. Water in the form of ice and the bar is also popular for cocktails. The bar must ensure they prevent cross-contamination and cross-contact as much as possible, which can be achieved by:

1. Cleaning

We all realise that the bar does need to be cleaned, mostly to prevent and minimize stale alcohol oduors, along with the high-risk equipment in the bar.

Equipment such as:

- Blenders
- Milkshake mixers

- Juice dispensers
- Draught taps
- Ice scoops and basins

These are all items that come into direct contact with dairy, water and juices. All these items can be considered open to contamination. Considering the above, it would make sense then that these should be treated with care. This means that these areas need to be hygienically cleaned and disinfected.

2. Have a strict system for washing and drying glassware.

For both hygiene and aesthetic purposes, glassware should always be washed separately from everything else, particularly items spoilt with food. The most ideal way is with a glass washing machine, which you can simply fill up with the proper solutions and then let it do the cleaning, sanitizing and rinsing for you. But if you're washing with your hands, you still need to follow the same process.

- Rinse the glass, then use a clean cloth or brush wash with detergent, then dip in glassware sanitizer.
- Air dry in a drying rack (not on a flat surface or towel, which can trap odours and bacteria inside the glass). If you really need to dry manually, use a clean, dry towel

3. Look after your linens.

- Damp linens are ideal breeding grounds for bacteria and should be laundered daily – that means bar towels, cleaning cloths and uniforms.
- Use separate cloths for cleaning dishes, glasses and surfaces. Avoid sponges, which trap bacteria and can't be properly washed.
- Use separate towels for drying hands and for drying anything else. Only use clean and dry towels.
- Once you've used a cleaning cloth or towel, put it into the laundry pile to be washed again, don't rinse and

reuse it!

- **Tip:** If you're worried about towels or clothes getting mixed up, designate different colours or styles for each task.

4. Storage

In general, we find that milk, cream and juices are often left uncovered in the fridge and therefore exposed to the open environment. This means that these beverages expire a lot faster, and that allows for the opportunity for cross-contamination. There are also a number of syrups which are often left out after opening, which need to be refrigerated as per supplier's label.

5. Temperature Control

Fridge temperature also plays a part in the hygiene of the bar, and keeping fridges running optimally is equally important for beer temperatures. Milk and creams are also left out due to the busy conditions of the bar. And as mentioned above, milkshake and cocktail syrups are also incorrectly left out.

Top tip: The ideal temperature for refrigerating soft drinks and juices is around 3°C. This way, you can keep your drinks cool without freezing them or changing their properties.

6. Clean and Sanitize.

It's super important for staff to understand the difference between cleaning and sanitizing – if you're not doing both, you're doing it wrong. Cleaning removes things you can see (food, dirt, liquid). Use a clean cloth and a food-safe anti-bacterial detergent or a liquid cleaner (not just water) to wash down surfaces, tools, dishes, etc and then rinse them well.

Sanitizing disinfects the surface, killing the things you can't see (bacteria, pathogens, etc). After cleaning, spray down surfaces with a sanitizer and wipe off with a paper towel or

a clean, unused cloth.

7. Train your staff on all of these points

- While much of the above may seem like commonsense, ultimately you can't expect your staff to know all the rules and regulations if you don't train them.
- Design a training program that every new staff member has to go through
- Brief your team often to remind them of procedures – it's very easy for things to fall through the cracks, especially during peak business times. Create checklists for the cleanig routine to monitor it .

BAR INVENTORY MANAGEMENT

Bar inventory should be checked twice . Then only you'll be able to figure out how much of it you've used over a period of time. That's known as calculating inventory usage.

PURPOSES FOR TAKING BAR INVENTORY

1. Bar inventory management is about having control over your product, protecting your profits, and delivering incredible customer service. It's awful when you can't make half of your menu because you're missing

multiple ingredients.

2. Which products are in demand and which aren't. This implies for strategic alcohol pricing and what you should order from your vendors going forward.

HOW TO DO BAR INVENTORY

The general idea behind physically taking bar inventory is that you count all the stuff you have. Then, in a little while, you count it again. The first time you count, it's the starting inventory number. The second one is the ending inventory number. The difference between those two numbers is used to draw a lot of useful conclusions for the operation of your business.

1. DECIDE WHERE TO START

You'll typically want to start at the front bar. Then move on to any back bars, beer coolers, wine room, and then to liquor storage areas.

But it all depends on the bar layout design. Do whatever makes sense for your space. But make sure you know exactly where all your stuff is and in what order you'll be counting it. Because

you'll need to do it in exactly that same order next time as well.

2. DECIDE WHAT TO RECORD

You need to figure out what information you're going to record. Most bars tend to capture the following data in their inventory counts:

Product brand or name (Whiskey, Scotch, Tequila, Wine, Beer, etc.)

Format (liquor bottle sizes, wine bottle sizes, beer keg sizes, etc.)

Level (Full, half, etc. , how much liquor is left in the bottle). Again, you'll need to record the exact same things during

both starting and ending inventory counts.

3. DECIDE HOW OFTEN TO TAKE LIQUOR INVENTORY

How much time will elapse between each inventory count? This is, again, important to be consistent with. Without consistent historical data, you won't be able to draw conclusions confidently.

Most bars and restaurants go with Daily, Weekly or Monthly inventory counts. The more often you count, the better. But not every bar has the bandwidth to commit to weekly inventory counting.

4. TIME TO COUNT EVERYTHING.

We'll come right out and say it: physically taking inventory is a glorified manual counting process. Anyways, you'll have to repeatedly count individual amounts in individual bottles. That's the only way how to count liquor bottles if you don't automate it.

Start at the Front Bar

Start at your front bar, note how many liquor bottles of all sizes and types you have.

Then, move from the front bar to your back bars, liquor storage rooms, walk-ins, refrigerators, and cellars.

Liquor Storage Room Inventory Count

It's vital that your inventory count moves beyond the front of house into your liquor storage room and your warehousing, if you utilize any. While a simple front-to-back solution may work at the bar, your storage room is likely a bit more complicated. The best way to handle this area is to create a map and flowchart of all storage shelves and the order to count them, then training your staff to always take inventory in the same order to ensure the most accurate and consistent counts.

INVENTORY REGISTER FORMAT

Beverage name	Size	Opening stock	Received	Current stock	Consumption	Balance
Smirnoff						
Beluga						
Antiquity						
Jose Cuervo						
Corona						
Dom						
perignon						

BAR OPENING AND CLOSING CHECKLIST

Whether you already run a successful bar or you're opening a new business, a bar opening and closing checklist is one of the best ways to make sure your bar, nightclub, or pub is clean, organized, and ready for the next day. These bar checklists include the bar opening procedures and bartender closing duties that your staff needs to complete at the beginning of the day and before leaving each night, such as cleaning, restocking, storing, organizing, and locking up.

BAR OPENING CHECKLIST

1. Do a Preliminary Building Check

When your staff first arrives, they should do a quick scan of the property inside and out to make sure everything looks in order.

- Clear any debris they might have collected overnight outside your building, on the sidewalks, in the doorways, or on the windows.
- Once inside, check for odours, trash, spills, or items out of place and decide if the floors need to be vacuumed.
- Empty and reset pest traps.

2. Polish and Sanitize Surfaces

To make a good impression on your customers, you'll want to make sure your bar is sparkling clean, from the counters to the glasses.

- Wipe down countertops with a sanitizing solution.
- Wipe down stool seats and tabletops to clear away any dust that may have collected overnight.
- Polish the glassware that was air drying from the previous night.

- Polish any silverware you plan to use during the day, including the barware.
- Dust any alcohol bottles on display.
- Clean faucets and taps with sanitizer.

3. Take Inventory of Beverages

Once you make sure everything in your bar looks in order and presentable, it's time to ensure that your beverage stock is ready for day's service.

- Count your bottle inventory to ensure nothing was stolen overnight. Check the levels of your wine, liquor, and mixer bottles; take note of what stock needs to be ordered.
- Stock your back bar cooler.
- Check your keg levels; take note of which ones may 'kick' next and prepare a backup to replace during the shift.
- Test the taps and clear the drain lines by pouring out a little beer from each keg.

4. Set Up the Room

- Empty the bar dining area.
- After you've completed your inventory check, set up your space so it is ready to host customers.
- Set up the tables and chairs.
- Set up your service bartending supplies you'll need for your shift.
- Set out clean bar towels.
- Prepare the cash drawer for service.
- Roll the flatware into clean napkins.

5. Prep and Refill the Condiment Bar

With your station set up, it's time to prep your condiments and garnishes for the drinks on your menu.

- Wash and cut the fruit for the day.
- Refill bar garnishes, including rimming salt and sugar, olives, and cherries.
- Squeeze fresh citrus juice to pair with drinks.

6. Refill the Ice Bin

Ice is considered food in the food service industry, so your ice must be as fresh as your other drink ingredients.

- Empty out the ice bin under the bar.
- Melt any ice build-up with hot water.
- Wipeout the bin.
- Stock the bin with fresh ice.

BAR CLOSING CHECKLIST

1. Empty Out and LockUp

For the first step of your bar closing checklist, check your restaurant for any remaining customers. Locking up should be the first step because you want to make sure everyone is out before you start cleaning and counting the money. Ensuring every one of your customers is out of the bar at the end of the night is critical not only from a courtesy standpoint but also in terms of safety.

- Ensure the dining area is clear of customers.
- Check the restrooms for any lingering guests.
- Check that the kitchen is empty.
- Check accessible closets to ensure no one is hidden in them.
- Lockup patio furniture.
- Lock the entrances; set any alarms before leaving for the night.
- Turn off televisions, radios, LED signs, and additional lights.

2. Count the Money and distribute tip

- Once you've locked up, you can begin counting the money and cleaning up for the night. Along with counting the money, you'll also need to distribute the night's tips. You should have an established tipping system, such as working on an individual basis, daily pools, or other ideas that distribute the money fairly.
- Distributing the tip pool.
- Balancing cash registers.
- Securing money in safes.

3. Store Perishables

Storing and refrigerating perishables is an important way to save money at your bar. Every drink or ingredient that you save overnight is money going toward profits.

- Store fruits and garnishes in plastic bags or containers to prolong their freshness.
- Refrigerate any pre-made mixed drinks such as Sangria or punch.
- Refrigerate cocktail ingredients such as Soda and Juice.
- Lockup expensive beers and liquor bottles.

4. Organize and Date

Empty food storage container with a date label.

Organizing your bar and kitchen is an important task, and it ensures that opening will run smoothly on the following day. Additionally, dating your food and alcohol lets you know when it was opened and if it's still good to use. Practicing proper dating and organization is essential for passing health inspections.

- Date newly opened bottles of wine and liquor.
- Clean menus and recycle old ones.
- Label all the fresh ingredient's containers.

5. Clean Everything

Cleanliness is one of the prime indicators of a professional and well-managed bar space. Whether it's dust on the shelf, rings on the countertop, or a napkin that didn't make it to the trash, unclean appearance can speak volumes about your business, particularly to the health inspectors. Cleaning is probably the most labor-intensive part of the closing checklist, but if the entire staff work together, it can be done quickly.

Here is a short list of important cleaning tasks that need to be completed every night:

- Wipe down countertops.
- Wipe down the soda gun.
- Clean out soda gun holsters.
- Remove clogs from floor drains.
- Wipe down your speed rails.
- Clean the exterior of liquor bottles if any product has spilled.
- Load the dishwasher and clean the glassware with the bar glass cleaners.
- Drain off dirty dishwater and scrub down your sink.
- Wash other small wares like muddlers, jiggers, and stirrers.
- Wipe down beer taps and thoroughly clean them once a month.
- Sweep the floors in the front- and the back of the house, then mop it.
- Clean out the blenders.
- Clean the bathrooms thoroughly.
- Leave all of your glassware, small wares, and equipment out to air dry, ensuring they're clean for the following day.

6. Refill Disposables

Refilling disposables behind the bar can help save time when opening, for the following day. Keep your bartenders quick on the draw, during the service. Any single-use product should be stocked for the next day, no matter how inconsequential it may seem. Here is a list of a few bar disposables that need to be refilled every day: toothpicks, drink umbrellas, stirrers, straws, napkins.

BARTENDER

A bartender (also known as a barkeep, barman, bar maid) is a person who formulates and serves alcoholic or soft drink beverages behind the bar, usually in a licensed establishment. Bartenders also usually maintain the supplies and inventory for the bar. A bartender can generally mix classic cocktails. Bartenders are also usually responsible for confirming that customers meet the legal drinking age requirements before serving them alcoholic beverages.

MIXOLOGIST

A mixologist is a cocktail designer that serves seasonal and/or establishment signature drinks and prepares own house-made syrups, bitters, essences or other ingredients that a bartender will need in order to provide a service to a customer.

FLAIR BARTENDER

Flair bartending is the practice of bartenders entertaining guests, clientele or audiences with the manipulation of bar tools (e.g. cocktail shakers) and liquor bottles in tricky, dazzling ways. Used occasionally in cocktail bars, the action requires skills commonly associated with jugglers. It has become a sought-after talent among venue owners and marketers to help advertise a liquor product or the opening of a new bar establishment. Competitions have been sponsored by liquor brands to attract flair bartenders, and some hospitality training companies hold courses to teach flair techniques.

QUALITY'S OF A BARTENDER

1. Knowledgeable about drinks

A professional must know their craft. We employ expert mixologists who are well-versed in the common and not-so-common cocktails and are always happy to offer great

recommendations that pair well with your meal. A great drink can complement a great meal, and a good bartender will know how to create an unforgettable experience for you.

2. Maintains cleanliness

Cleaning a bar may not be the most glamorous part of their job, but it's a crucial aspect for customers who don't want to enjoy their drinks in a dirty environment. It's also important to keep a tidy bar, as this helps them perform more efficiently. Our bartenders are constantly cleaning so ensure that your Northend dining experience is top-notch.

3. Good customer service skills

Bartenders are taught to facilitate a friendly and lively environment in which all customers feel welcomed! Our world-famous small talk will have you feeling right at ease, whether you're a Boston- native or a tourist from Wyoming. Exceptional customer service is the standard.

4. Great time management and memory

Being able to remember uncommon names and long, complicated orders under pressure, while multitasking and still connecting with the guests in an authentic manner is a very underrated skill. Luckily, our bartenders have great time memory and even better time management.

5. Situational awareness

Bartenders are constantly monitoring guests. They know when someone needs a drink, they know who needs what drink, and they're very attentive to the needs of their patrons.

DUTYS AND RESPONSIBILITIES OF BARTENDER

1. Being Flexible

While sticking to the menu is easier, there are a lot of people out there who need something on the menu tweaked. A good bartender happily obliges. In bar and restaurant terms, this is hinted at with phrases like *“killing them with kindness”* or *“going above and beyond”*. But the reality of being a flexible service professional is simple. Do what you can within your resources to provide a good experience.

2. Making Recommendations

People naturally look for reasons for things. Should they order this? Should they order that? A bartender will push them over the edge of indecision. That's why curating hospitality experiences is so important. There is a world of difference between the winter cocktail on your menu and a bartender genuinely recommending the winter cocktail on your menu. Give them a reason.

With a few questions, a bartender can make great recommendations that can turn an otherwise standard experience into a memorable one. They can also use these recommendations to upsell cocktails and walk away with a little more money that night.

3. Making & Serving Drinks

The mixing and combining of ingredients alcoholic and notes the big kahuna of bartender duties. There are two levels to this. The first is knowing all the classic cocktails. The second is being familiar with the basic ingredients to experiment with them and make original cocktails. You should also know how to pour a beer, but that seems less impressive to customers.

4. Knowing the Classics

Check out any of the hundreds of most popular cocktail lists on any given year, and they're all pretty similar. If a bartender commits 30 cocktail recipes to memory, they can probably handle 75% of orders that come their way. They'll also need to know the standard pour for each drink sold so they can maximize their profit.

5. Creating Signature Cocktails

This is where familiarity with the main liquor families (Brandy, Rum, Gin, Whiskey, Vodka, and Tequila) brings huge benefits, when a bartender has a good feeling for the primary liquor types and how they interact with mixers and juices. And then they're ready to unleash their inner mixologist.

6. Keeping the Bar Area Clean

While bar managers are responsible for creating bar cleaning checklists, it ultimately falls under bartender duties. They execute them so frequently, that keeping a tidy workstation becomes a way of life for bartenders. They also stock up the bar cleaning supplies and delegate most of the cleaning in the bar, a back job description. Because when the bar environment isn't organized, it can quickly devolve into chaos. Beyond efficiency, bartenders keep a clean bar for health and hygiene purposes.

7. Processing Payments

Having a balanced drawer at the end of the night is obviously important for any retail sales business. And bars are no exception. The trick with bars is that it's a much more hectic environment than most other retail environments. Keeping accurate tabs, closing out payments quickly, and having a balanced drawer is no small feat in a busy bar. It requires great attention to detail.

8. Managing Inventory

Creating bar cleaning checklists, managing bar inventory and stocking a bar are technically the responsibility of the bar manager. But a good bar manager will always leverage the expertise of their bartenders when managing their beverage programs inventory. This includes alcohol and mixers and also bar supplies like cocktail napkins, glassware, and more.

9. Menu Engineering

Bartenders are uniquely qualified to engineer menus for bars. That's because they're familiar with what drinks are profitable, what drinks are popular, and how guests respond to the menu. They've also got a talent for creating signature cocktails. That means they can create high-profit drinks they know will sell and make them seen..

10. Placing Food Orders

Lastly, let's face it, most bartenders will be placing food orders. That means our final bartender duty is to become an expert on the food menu. Then apply the same flexibility and suggestiveness that they would on the drink menu. If your bar offers food, you've opened up the suggestive selling opportunities exponentially. Which is a fantastic way to increase your profit margins.

BARTENDER GROOMING STANDARDS

Skills, experience and qualifications are important, but so is our grooming. Our appearance is a statement of who we are. Our grooming should create a professional image at work and we have to be attentive towards our appearance and posture. Grooming is the combination of style and discipline. It is to project an image of organization's culture and ethics to our esteemed customers which are our guests.

It also enhances the personality of employees, character of an organization and the alue of the company.

PERSONAL GROOMING TIPS FOR MALES

Beard should be Clean/trimmed: If you work in hospitality, you must maintain a clean shave look. Some organizations allow trim Beard style, but a long beard look is not allowed until it is related to your religious beliefs.

Personal Hygiene: No matter how good your clothes would be, nobody will even like to talk with you if you don't look fresh and hygienic. Personal Hygiene includes clean teeth, fresh breath, a clean body, etc.

Combed Hair: Your hair should be decently combed, set, and trim.

Clothes should be well-maintained: You should wear decent formal clothes. Always wear Black, grey or blue colour.

Formal Trousers: Your shirt should be wrinkle-free and should be light in colour. Also, follow the dress code of your company, if any.

Use Light Perfume: Smelling good is not just well-grooming; it is considered as etiquettes too. Always use light perfumes that matches your decent personality.

Trimmed Nails: Clean and trimmed nails represent how hygienic you are. Therefore, your nails should be trimmed and clean.

Shoes should be polished: Just imagine dirty footwear with clean and crisp clothes. Doesn't it look awkward? Of course, it does. So, never forget to polish your shoes before leaving for your workplace.

Gentleman Styling: It means your dressing sense should be decent. Your belt and shoes must be of the same colour.

Clean Spectacles: Yes, spectacles are also covered under grooming. So, if you are one of those who wear spectacles,

they must be clean too.

Avoid tattoos: Always keep one thing in mind tattoos are not allowed in the corporate sector. Therefore, it is better not to have any tattoos, but they shouldn't be visible if you have one.

PERSONAL GROOMING TIPS FOR FEMALES

Decent Clothing: Your dress and clothing style should be decent and formal. Don't try to be extra or wear flashy clothes; it will make a wrong impression.

Smell Good: Smelling good is a part of well-maintained Hygiene. Therefore, always use mild perfumes to add charm to your personality.

Properly Done Hair: Your hair should be appropriately done in a bun or ponytail. A messy hairstyle doesn't go well with your professional look.

Minimal Makeup: We can understand makeup is a girl's best friend, but never forget you are going to work, not for a party.

Clean Nails: Being a female, your nails should be properly clean and manicured.

Comfortable footwear: Never wear heels at your workplace; it can make you uncomfortable. Try to wear comfortable or flat footwear.

Avoid Tattoos: Tattoos are not allowed in the professional sectors, so if you have any, try to hide them always.

A Big No to Jewelry: Who wears heavy jewelry in the office? Exactly, heavy jewelry doesn't look nice in the office. You can wear light jewelry pieces that complement your dressing style.

Clean Spectacles: Your spectacles should be clean if you wear one.

GENERAL GUIDELINES FOR PERSONAL HYGIENE IN BAR

1. Don't smoke or drink while working behind a bar, it is considered unsanitary and in many countries is also illegal.
2. Always wash your hands with warm running water, including your wrists, for at least 20 seconds. Dry them well with a clean, dry towel preferably a paper towel. Hands need to be washed after handling rubbish, going to the toilet, smoking, using chemicals leaning products, playing with cute dogs, handling raw food, sneezing, blowing your nose, coughing and so on.
3. Look after your hands, especially your fingernails, as these are always in view. Keep fingernails short, and if using nail polish, use neutral colours.
4. Long hair should be tied back.
5. Practice proper glass handling techniques. Hold glassware by the middle bottom or it's stem without touching the top half of the glass, as it can contaminate it with bacteria and cause illness. Fingers should never touch the inside of the glass, nor the outside of the glass below the rim as far as it goes down till the level the lips may reach.
This rule holds whether the glasses are clean or dirty.
6. Clean your clothes, uniforms, aprons and shoes. Wash your uniforms daily.
7. Wear gloves for any ingredient prep. Whenever anything is being prepped to go in someone's glass (whether it's slicing one lemon or 100), wear gloves, and remember to change them often. Don't share or reuse gloves.

THE CHEMISTRY OF ALCOHOL

Alcohol is a colourless, odorless, tasteless, volatile and flammable liquid which is produced by the natural fermentation of sugars and it is the intoxicating constituent of Wine, Beer, Spirits, and other alcoholic beverages, and it is also used as an industrial solvent and as a fuel. Alcohol is also classed as a sedative hypnotic drug which means it acts to depress the central nervous system at high doses. At lower doses, alcohol can have many effects such as enhancing appetite by supporting digestion, warming the body by improving blood circulation/blood flow, leading to deep sleep etc. But drinking too much alcohol at one session can lead to drowsiness, respiratory depression (where breathing becomes slow, shallow or stops entirely), coma or even death.

TYPES OF ALCOHOL

1. Ethyl Alcohol (Ethanol)

Ethanol is the only one of the three types of alcohol manufactured for human consumption. It is clear, without colour, and results from plant fermentation. Ethanol is the alcohol used in alcoholic beverages, meaning that it is the type of alcohol with the highest rates of misuse. It is also a preservative in health and beauty products and is found in lotions, creams, and paints. It is also used as an ingredient in colognes and astringent in skin cleansing products.

The boiling point of ethanol is 78.37°C and the Freezing point of Ethanol is -114.1°C

2. Methyl alcohols (Methanol)

Methanol is a clean energy chemical for creating many popular household products and fuelling various types of transportation, such as cars and ships. Methanol does not have any colour but does have a slight alcohol smell. A widespread use of methanol is in creating formaldehyde

for use in synthetic resins. Other methanol-containing products include antifreeze, de-icer, vape fluid, cigarette, tobacco, fuels, solvents, and pharmaceuticals.

Methanol is moderately toxic for small animals - Highly toxic to large animals and humans - May be fatal/lethal or cause blindness and cause damage to the liver, kidneys, and heart if swallowed.

3. Isopropanol

Isopropanol is the main ingredient in rubbing alcohol and hand sanitizers. It is also clear and colourless but has a distinct alcohol smell. Isopropanol maybe an ingredient in household cleaners, paint thinners, and perfumes.

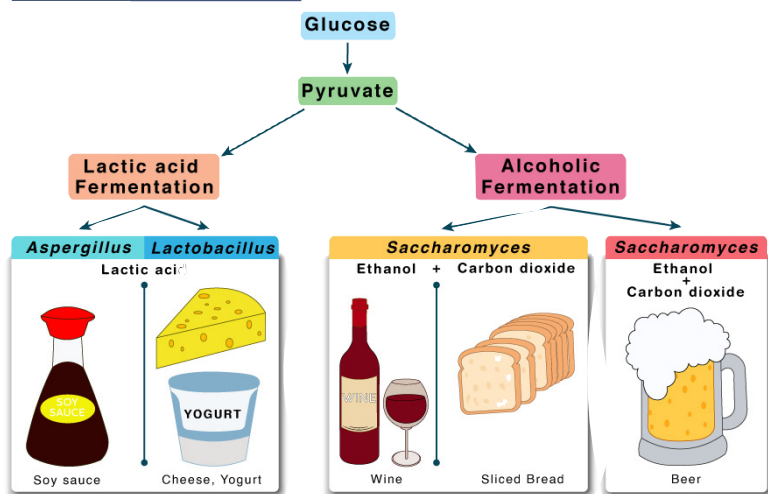

The body absorbs isopropanol rapidly, and within less than an hour, a person will become very sick. It suppresses the nervous system, causing shallow breathing, a slowing heartbeat, and coma. Rubbing alcohol is twice as dangerous as ethanol alcohol, and consuming five to eight ounces can be fatal.

PRODUCTION OF ALCOHOL

FERMENTATION

Fermentation is a metabolic process in which microorganisms actively create a desirable change in food and beverages, whether it's increasing flavour, preserving food stuffs, providing health benefits, or more by the presence of yeast.

Fermentation

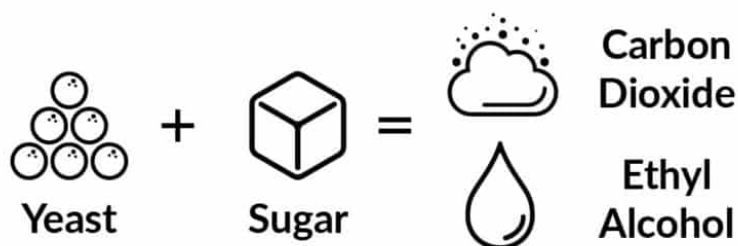

EATHANOL FERMENTATION/ ALCOHOL FERMENTATION

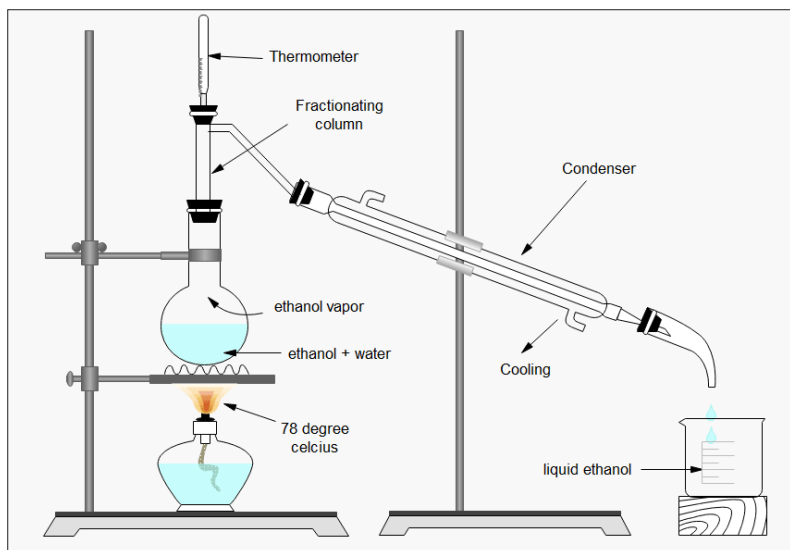

Ethanol fermentation, also known as alcoholic fermentation, is a biological process that converts sugars into ethanol and carbon dioxide. Yeasts break down sugars like glucose, fructose, and sucrose to produce ethanol and carbon dioxide. This process occurs in the absence of oxygen, making it anaerobic. Alcoholic fermentation produces wine and beer.

With unlimited sugar, the alcohol level increases during fermentation until it reaches a concentration between 12 and 18%. Levels of alcohol above 18 or 19% are usually toxic to the yeast and leads to the death of the cells.

Most yeast strains can tolerate an alcohol concentration of 10–15% before being killed. This is why the percentage of alcohol in wines and beers is typically in this concentration range.

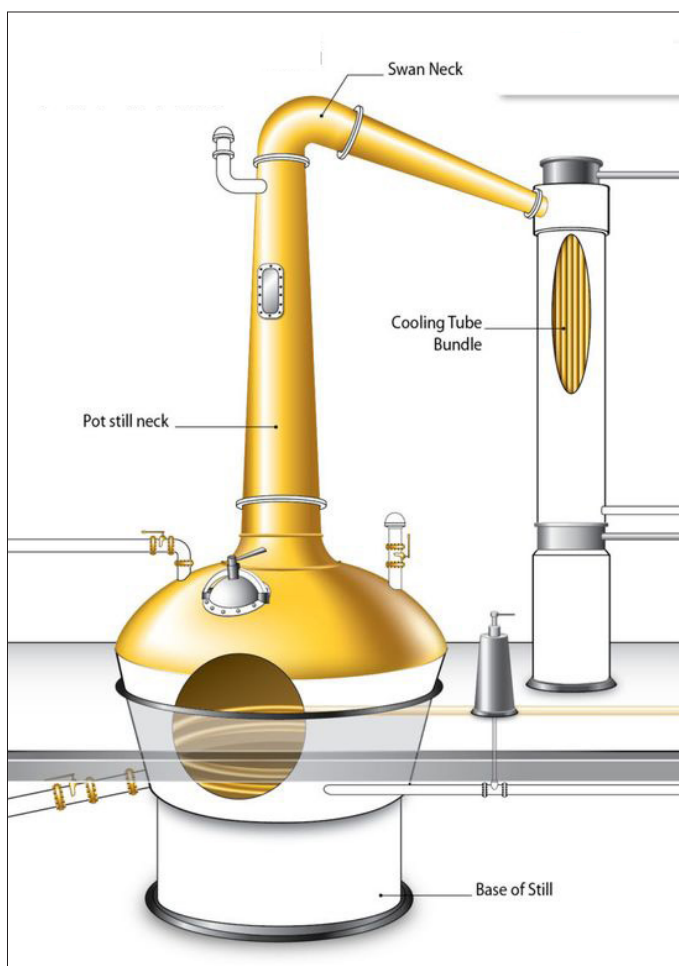

DISTILLATION

Distillation is a widely used method for separating mixtures based on difference in the conditions required to change the phase of components of the mixture. To separate a mixture of liquids, the liquid can be heated, to force the components which have different boiling points, into the gas phase. The gas is then condensed back into liquid form and collected. Repeating the process on the collected liquid to improve the purity of the product is called '*double distillation*'. Although the term is most commonly applied to liquids, the reverse process can be used to separate gases by liquefying components using changes in temperature and/or pressure.

1. POT STILL DISTILLATION

A Pot Still is also called 'Alembic Still'. It is typically made from copper. Copper was traditionally used because it is a good conductor of heat and it extracts sulphur from the distillate. The classic pot still has different components; the bottom part is called the kettle where the ferment is heated. The ferment evaporates and the vapours travel through the swan-shaped neck and reach the worm, an spiral-shaped copper tube attached to the condenser where the vapour is condensed to liquid.

Generally, aged spirits (like Whisky, Tequila and Rum) and crafted spirits are made in pot stills. Pot Stills also help add desired congeners to the spirit responsible for aromas and flavours in the spirit.

ADVANTAGES OF POT STILL

- It produces spirits that are individualistic due to the presence of congeners.
- Spirits with pronounced aromas are produced.
- Spirits with heavy bodies are produced.
- Small quantity of wash can be distilled.

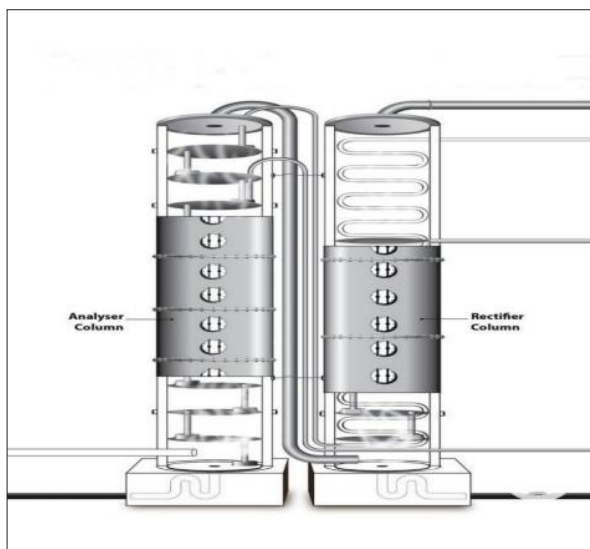

DISADVANTAGES OF POT STILL

- It needs more time and labor.
- Its operations are costly
- It needs frequent cleaning and refilling, after each distillation.

2. COLUMN STILL/PATENT STILL

Column Still is called 'Coffey still', or a 'Continuous Still'. It is relatively contemporary and designed in such a way that pure alcohol is derived directly from the ferment. It is used for industrial and mass production of commercial alcohol. .

Column Stills are made from stainless steel and comprises of a tall column structure attached at the top of the boiling kettle designed to attain purer vapours. It is divided into chambers using perforated plates. The still is constantly heated at the bottom, so when the ferment is poured from the cooler's top part, and when it hits the steam, it vaporises and sends the alcohol back to the top. When the alcohol carrying vapour passes through the perforated plates, it condenses the heavier particles and only alcohol carrying vapours continue till to top, travelling through the pipes attached to the condensers where the vapours are condensed to the desired liquid. Column Stills are used to

derive white or neutral spirits like Vodka, Gin and White Rum.

ADVANTAGES OF COLUMN STILL

- It does not require too much labor, cleaning and refilling.
- More quantity can be produced as compared to the PotStill.
- It is cost effective.

DISADVANTAGES OF COLUMN STILL

- It is not suitable for distilling small quantities of spirits.
- Aroma and other essential elements that are required in a drink might not be achieved.

RESPONSIBLE SERVICE OF ALCOHOL

Serving alcohol comes with a great deal of responsibility. Keeping patrons safe from harming themselves and keeping your establishment safe from any liability, is every employee's job. Failure to act responsibly may result in fines, loss of your liquor license, damage to your reputation, increased cost of insurance, or even imprisonment.

1. Train your staff

Proper training is a critical part of creating a responsible and accountable staff. Employees should have alcohol awareness training and complete timely recertification. Employees shall not consume alcohol before, during or after the shift.

2. Check ID

Before serving an alcoholic beverage, employees must check the identification of guests who appear to be under the legal age of drinking.

- Never accept excuses from guests who don't have a valid ID. Underage people who will try to buy alcohol without a valid ID can be very convincing, but you must always follow the law and your company's written policy for checking ID.
- An ID scanner or bouncers can be placed at the entrance of the bar to monitor underage people and ensure that they do not get served alcohol or any alcoholic products.
- If you are caught serving a minor, you will not only face fines but risk losing your liquor license for a few days or longer.

3. Do not serve visibly intoxicated customers

It is important that not only bartenders, but all servers, are watchful and know when to say “enough.” If they are slurring words or are unsteady, these are indicators that the customer should not be served more alcohol. Sometimes it is hard to tell when a customer has had enough but alcohol awareness training programs can help. If a customer comes into your establishment and is already looking like they have had enough, it is your right and obligation to not serve them. The customer might not be happy, but an unhappy customer is easier to deal with than the risk of them harming themselves, disrupting the bar or causing an innocent person any harm.

Signs of Intoxication

Signs of intoxication can vary depending on the individual and the amount of alcohol consumed. Some common signs of intoxication include:

- Loud speech or foul language
- Over ordering
- Overly friendly behaviour
- Slurred speech
- Irrational statements
- Loss of coordination or concentration
- Drowsiness
- Glassy or bloodshot eyes
- Big changes in mood overtime
- Personality changes
- Being over affectionate to strangers
- Bumping into furniture and other people
- Falling down or tripping over things
- Inability to walk in a straight line
- Inability to do basic things like lifting a glass

4. Practice Slow Service

If you do suspect that a customer is intoxicated and you think they've had enough, you can modify your behavior in subtle ways to discourage the customer from ordering yet another beverage.

- Bring them some water.
- Take a few steps back from the bar or turn away from the customer.
- Polish glasses, or restock shelves to put some distance between you and the patron.

5. Safe mode of transport from the premises

Have a designated driver policy or an alternate mode of transportation, Uber or Taxi service readily available for those patrons who should not be behind the wheel. Allow customers to keep their car parked in your lot overnight without fear of being towed or ticketed.

6. Encourage responsible drinking

Promoting responsible drinking for customers is crucial for maintaining their well-being and safety. Here are some key ways to encourage responsible drinking:

- Offer non-alcoholic alternatives, such as mocktails or low-alcohol beverages.
- Encourage customers to pace themselves and drink water in between alcoholic beverages.
- Raise awareness among customers about responsible drinking through posters and place scanners on tables, etc.
- When planning a party with alcohol, arranging a limited and controlled time for the service of alcohol can help in controlling overconsumption and promote safe drinking.
- Always use a measuring device on all mixed drinks.

Using standard measures for pouring drinks can be very helpful in maintaining a level of consistency which can help in avoiding alcohol-related issues.

**DRINK
RESPONSIBLY**

**Alcohol is not
the answer, it just
makes you forget
the question.**

People drink alcohol for many reasons, to celebrate, to socialize, to commiserate or to drown their sorrows. Sometime people drink alcohol to change their mood to feel more relaxed, courageous and confident. However, the effect of alcohol is only temporary. As it wears off, we often feel more worse because of how alcohol affects our brain and body.

HOW ALCHOL ATTACKS THE BRAIN

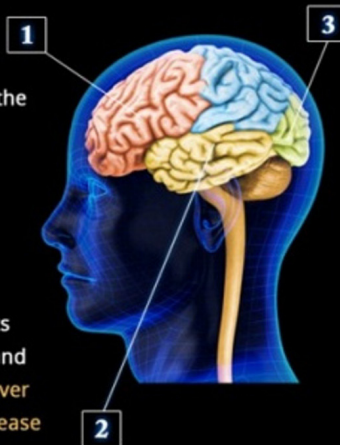

A Guide to the sequential damage alchol inflicts on neural tissue

1.

First, alchohl effect the forebrain and assaults motor cordination and desition making.

2.

Then, alchohl knocks out the midbrain, and you lose controlover emotions and increase chances of blackout.

3.

Finally, alcohol batters the brain stem as it affects heart rate, body temperature, appetite and conscious-ness, a dangerous and potentially fatal condition.

HOW ALCOHOL AFFECTS YOUR BRAIN

Alcohol is a depressant (a drug that reduces nerve functional activity) that can disrupt the balance of neurotransmitters (chemical messengers) in your brain and affect your feelings, thoughts and behaviour.

Alcohol affects the part of your brain that controls inhibition, so you may feel relaxed, less anxious, and more confident after a drink. But these effects quickly wear off. The chemical changes in your brain can soon lead to more negative feelings, such as anger, depression or anxiety, regardless of your mood.

Alcohol also slows down how your brain processes information, making it harder to work out what you're feeling and the possible consequences of your actions.

KNOW YOUR STANDARD DRINK

A standard drink is a way to measure alcohol. It usually has about 14 grams of pure alcohol. One standard drink contains 10 grams of pure alcohol (the same as 12.5ml of pure alcohol).

This amount of alcohol is found in (approximately):

- One 12-ounce can of regular or Light Beer contains 5% alcohol.
- A half pint (8 to 9 ounces) of Malt liquor or other types of Craft Beers have 7% alcohol.

- One 5-ounce glass of table Wine has 12% alcohol.
- One shot (1.5 ounces) of Liquor contains 40% alcohol.

To reduce the risk of harm from alcohol-related diseases or injuries, healthy men and women

shouldn't drink more than **10 standard drinks a week and no more than 4 standard drinks in a day.**

SCIENCE OF HANGOVER

A hangover is a group of unpleasant symptoms that can happen after drinking too much alcohol. As if feeling awful weren't bad enough, frequent hangovers also are linked with poor performance and conflicts at home, school and work. Generally, the more alcohol you drink, the more likely you are to have a hangover the next day. A hangover refers to a set of symptoms that include fatigue, weakness, thirst, headache, muscle aches, nausea, stomach pain, vertigo, sensitivity to light and sound, anxiety, irritability, sweating, increased blood pressure etc.

HOW TO CURE HANGOVER

Time is the only sure cure for a hangover. These symptoms of hangover can last up to 24 hours. In the meantime, here are a few things you can do to help yourself feel better:

Fill your water bottle. Sip water or fruit juice to prevent dehydration. Resist any temptation to treat your hangover with more alcohol. It'll only make you feel worse.

Have a snack. Bland foods, such as toast and crackers, may boost your blood sugar and settle your stomach. Bouillon soup can help replace lost salt and potassium.

Take a pain reliever. A standard dose of a pain reliever you can buy without a prescription may ease a headache. But be careful about using these medicines with alcohol. Aspirin and ibuprofen (Advil, Motrin IB, others) can irritate your stomach. The combination of alcohol and acetaminophen

(Tylenol, others) can cause serious liver damage.

Go back to bed. If you sleep long enough, your hangover might be gone by the time you are awake.

HOW TO REDUCE THE CHANCES OF GETTING A HANGOVER

- To avoid a hangover, don't drink more than you know your body can cope with. If you're not sure how much that is, it's better to be careful.
- Having more than one drink per hour can cause a hangover. Your body needs about an hour to metabolize (process) one drink. Maintaining a moderate alcohol consumption will help you to not get a hangover also preventing you from falling sick or having any major injuries.
- Practice safe drinking by pacing yourself.
- Don't drink on an empty stomach (eat before and during the drinking period).
- Drink water while consuming alcohol, and before going to sleep.

DE ADICTION GUIDE

ALCOHOL DEPENDENCE

Being dependent on alcohol means a person feels like they're not able to function or survive without it and that drinking becomes an important – or sometimes the most important – factor in their life.

People who are becoming dependent on alcohol notice they need to drink more to get the same effect. They often give priority to drinking over other activities or obligations (such as work or family life) etc.

Being dependent on alcohol can also affect your relationships with your partner, family and friends, or affect your work and cause financial problems. These issues can contribute to depression and anxiety too.

HOW TO GET RID FROM ALCOHOL DEPENDENCE

Are you ready to break free from alcohol dependency or reduce your drinking to healthier levels? Taking the first step towards recovery is a courageous decision that can transform your life. Whether you aim to quit drinking altogether or simply cut it back, it's important to set clear

goals, seek support from loved ones or professionals, and stay committed to your journey. With determination and the right strategies, you can reclaim control and enjoy a healthier, and more fulfilling life. These practical tips can help you navigate the journey:

1. IDENTIFYING THE TRIGGERS

The first key step in giving up anything is identifying why you're doing it. Knowing why you drink alcohol can help you explore alternative ways to address those issues more productively. The common alcohol triggers include:

- Escape from problems / Reality
- Relationship / family stress
- Social events
- Trouble at work
- Work stress
- Negative emotions such as depression, anxiety, loneliness, guilt etc.
- Peer pressure
- Physical or sexual trauma
- Financial worries
- Family history of substance use disorders
- Social isolation or loneliness
- Physical pain or discomfort

2. TRACK YOUR TRIGGER

The urge to drink isn't random, even if it can feel like a devil on your shoulder that you can't control. If you pay some attention to when those urges happen, you can start to figure out what triggers them. This helps you avoid the triggers when you can, and plan your response when you can't.

- **First list external triggers:** What objects, people, and places make you want to drink? What about the times of day, or events? These can be in general drunk people or a specific friend.
- **Next list internal triggers:** Which moods or emotions lead you to drink? What about physical sensations? Thinking about certain memories or topics?
- Pay attention to your urges for a couple of weeks. Write down the time, place, and situation when they happen. Notice any patterns?

3. AVOID TRIGGERS WHENEVER POSSIBLE

Recovery isn't about gritting your teeth and relying on pure willpower. It's also about being honest with yourself.

- Social events with booze involved are a trigger for almost every recovering drinker. If you feel guilty for turning down invitations or feel disappointed to lose out on part of your social life, remind yourself that this isn't forever.
- Create a polite but firm way of refusing a drink when you are offered one.
- To stop people from offering you drinks at an event, bring your own cup and keep it filled with anon-alcoholic drink.
- Unfortunately, some of your friends and family might pressure you to drink, invite you to bars, or mock you for your decision. It sucks when your old buddies are trying to make you crash and burn—but it's crucial to distance yourself and not give them the chance to succeed.

4. KEEP YOURSELF BUSY

Staying busy is also a great way to distract yourself from alcohol dependence. When you tend to drink at a certain time of day, doing something else is one of the best ways to distract you from old habits to help break that pattern. You

can spend time for other activities like

- Instead of taking a drink to calm anxiety, try affirmations, deep breathing, yoga or meditation.
- Comfort yourself when feeling lonely by reaching out to your loved person or watching your favorite movie.
- Take a walk or spend quality time with your friends or pets.
- Go for a hike.
- Play sports.
- Go out to eat or catch a movie.
- When you're at home, pick up a new hobby or revisit an old one like painting, board games, playing a musical instrument, wood working etc..

5. CHANGE YOUR ENVIRONMENT

Humans are social beings by nature, but that nature is one of the leading environmental causes of addiction. Most people don't walk up to a stranger and ask to try a drug for the first time. In the majority of cases, the person's social environment facilitates their first instance of substance abuse. When someone is in a location with peers who are drinking or doing drugs, that activity automatically becomes more acceptable.

- Avoiding locations like bars or parties where you know there will be drugs or alcohol.
- Building a strategy for firmly saying "NO" if offered a substance.
- Reducing or eliminating time spent with friends who drink..
- Keep alcohol out of your home.
- Socialize more often with friends who don't drink.
- Plan activities you enjoy that do not involve drinking.

6. ASK YOUR FRIENDS AND FAMILY FOR SUPPORT

Recovering from alcohol addiction or abuse is much easier when you have people you can lean on for encouragement, comfort, and guidance.

Support can come from family members, friends, counselors, other recovering alcoholics, your healthcare providers, and people from your faith community.

- **Lean on close friends and family:** Having the support of friends and family members is an invaluable asset in recovery. Spend quality time with someone who you trust when you have the urge to drink.
- **Build a sober social network:** If your previous social life revolved around alcohol, you may need to make some new connections. It's important to have sober friends who will support your recovery. Try taking a class, join a church or a civic group, volunteering, or attending events in your community.
- **Make meetings a priority:** Spending time with people who understand exactly what you're going through can be very healing. You can also benefit from the shared experiences of the group members and learn what others have done to stay sober.
- **Involve a doctor if you have been a severe daily drinker:** If your first day being sober makes you feel like a crap (sweaty, shaky, nauseous, and/or anxious), you're going through withdrawal symptoms. This is rough but temporary, and a doctor can help make you more comfortable and safe.

7. STAY AROUND PEOPLE WHO SUPPORT YOUR PLAN

The people who are best for you right now are the ones who respect your choice and spend time with you in alcohol-free places. Unfortunately, some of your friends and family might pressurize you to drink, invite you to bars, or might mock you for your decision.

- It sucks when your old buddies are trying to make you crash and burn—but it's crucial to distance yourself and not give them the chance to succeed.
- The least supportive people are often the ones with their drinking demons, who don't want to question their behavior. Their comments aren't about you, and it's not your job right now to deal with their issues.
- If your drinking buddy won't stop pressuring you, think about what that relationship was about. Did you spend quality time with each other, or just enable each other's drinking? Look at your list of reasons to quit—shouldn't your friend want those things for you?
- Set down a firm rule if you must: "I've asked you to stop offering me drinks, but you won't stop. I'm not going to be around you until I get past this."

HOW TO HELP AN ALCOHOLIC STOP DRINKING

Watching a friend or family member's life be destroyed by alcoholism is deeply distressing and frustrating. If you want

to help, you have to first need to determine if the person is an alcoholic. Then, help your friend get the right treatment. By offering personal help, you can provide emotional support, practical assistance, and a sense of connection, which can be invaluable in the recovery process. Here are some ways to offer personal help to an alcoholic:

1. ASKING THE PERSON TO STOP DRINKING

It's not easy to talk to someone about their drinking. You might be worried that if you bring up your concerns, the person will get angry, defensive, lash out, or simply deny that they have a problem. In fact, these are all common reactions. But that's not a reason to avoid saying anything. Your patience, love, and support can play a crucial part in their long-term recovery. With these guidelines, you can help ease your loved one's suffering, preserve your own mental health and well-being, and restore calm and stability in your relationship and family life.

Tips for talking to someone about their drinking

- Choose a time when your loved one is not drinking and you're both calm and focused. Choose a place that's quiet and private, where you won't be interrupted—and turn off your phone and other devices to avoid distractions.
- Express your concerns in a caring way. Tell your loved one about the worries you have regarding their drinking and the effects it's having on their health, your relationship, and the family.
- Try to remain neutral and be compassionate rather than judging your loved one's behavior or try to shame them.
- Encourage your loved one to open up about the reasons why they're consuming alcohol. Are they stressed, bored, lonely, or anxious, for example? Many different

factors could be contributing to their drinking, but to stay sober your loved one will need to address any underlying causes.

Things to avoid

- Don't take any negative reactions personally. It may take several attempts to begin a real conversation with your loved one's about their drinking. Expect pushbacks and denial. Give the person time and space to come to terms with your concerns and to start seeing the problem for themselves.
- Don't attempt to threaten, punish, bribe, or preach. Avoid emotional appeals that only adds to the problem, drinker's feelings of guilt increases their compulsion to drink. Offer them advice, and not ultimatums.
- Don't cover up for your loved one's or make excuses for their behaviour. Trying to shield them from their responsibilities will only prevent them from seeing the negative consequences of their drinking and could delay them deciding to get help for the problem.
- Don't blame yourself. You aren't to blame for your loved one's drinking problem, you aren't guilty or responsible for their behavior, and you can't make them change.

2. ENCOURAGE HONESTLY

By encouraging honesty, you help create an environment where the person feels comfortable opening up about their struggles, which can lead to greater self-awareness, accountability, and ultimately, a stronger willingness to seek help and work towards recovery.

- **Create a safe space:** Establish a comfortable and private setting where they feel secure sharing their thoughts and feelings.
- **Build trust:** Develop a relationship built on empathy, understanding, and consistency.

- **Use open-ended questions:** Encourage sharing, by asking questions that begin with what, how, or why.
- **Avoid leading questions:** Refrain from asking questions that suggest a specific answer or judgment.
- **Listen actively:** Show engagement and interest in their response.
- **Avoid interrupting:** Let them share their thoughts without interrupting or finishing their sentences.
- **Show empathy and understanding:** Validate their feelings and acknowledge their struggles.
- **Avoid judgmental tone or language:** Refrain from using language or tone that implies criticism or disapproval.
- **Foster a non-judgmental attitude:** Create an environment where they feel comfortable sharing their truth without any fear of judgment.
- **Be patient and calm:** Manage your emotions to provide a stable support system.
- **Validate their experiences:** Acknowledge the challenges they face and the emotions they feel.

3. DONT PASS JUDGEMENT OR SHAME

When helping an alcoholic to stop drinking, making them feel shame or lowering their self-esteem will do no good in such situations. Remember, alcoholism is a disease. If you have not been through it, do your best not to make any judgments when someone you love is struggling with it. Shaming an addict will only make them turn to what coats their emotions, which is likely drinking. The approach of judgment and shame does nobody any good in the end.

4. DO NOT ENABLE THEM

Enabling an addict means that your behaviour somehow allows them to continue their use. This could mean making excuses for them or bailing them out of bad situations. The longer people allow their use to continue, the longer they

will take advantage of that fact. Enabling can also mean doing things for an addict that they are perfectly capable of doing themselves.

5. ENCOURAGE YOUR LOVED ONE TO GET HELP

Don't expect your loved one to overcome a drinking problem alone. Even if they don't require medical supervision to withdraw safely, they'll still need support, guidance, and new coping skills to quit or cut back on their drinking.

You can encourage your friend or family member to get help by:

- Offering to accompany them to a doctor's appointment, group meetings, or counseling sessions.
- Sitting with them while they call a helpline for advice.

6. NO MATTER WHAT CONTINUE TO BE SUPPORTIVE THROUGHOUT THEIR RECOVERY

Show them that you are proud of them and will support them throughout their journey, including getting the treatment or attending the meetings and support groups. This usually also means educating yourself on their addiction and getting support for yourself as well as an impacted loved one. Continued support is vital for continued recovery. The moment you no longer care about a loved one's recovery, they will pick up on it.

7. UTILIZE THE PEOPLE IN YOUR LIFE WHO QUIT DRINKING

If you know someone who has successfully quit drinking, speak with them. Of course, what works for one person will not necessarily work for everyone. Sometimes information and concern coming from someone who has been through recovery means more, than when it comes from someone who has not.

PERSONAL AND SOCIAL EFFECT OF ALCOHOL ABUSE

Drinking alcohol is a common social activity. People meet with friends or co-workers over drinks at the end of a workday to decompress. Most of us attend events that offer alcohol. It is an activity shared by everyone from college students to business executives.

Around the world, millions of people engage in this activity for various reasons. However, unregulated or irresponsible drinking could spur personal and social problems that could last for a lifetime.

1. ALCOHOL AND SHORT - TERM HEALTH RISKS

Excessive alcohol use has immediate effects that increase the risk of many harmful health conditions. These are most often the result of binge drinking which includes::

- i. **Injuries:** Such as motor vehicle crashes, falls, drownings, and burns.
- ii. **Hangover:** Hangover refers to a set of symptoms that occur as a consequence of drinking too much.

- iii. **Alcohol poisoning:** A medical emergency that results from high blood alcohol levels.
- iv. **Risky sexual behaviors:** Including unprotected sex or sex with multiple partners. These behaviors can result in unintended pregnancy or sexually transmitted diseases, including HIV.
- v. **Miscarriage and stillbirth:** It can cause Fetal Alcohol Spectrum Disorders (FASDs) among pregnant women.
- vi. **Weight gain:** Excessive alcohol consumption tends to make you put on weight.
- vii. **Loss of control over your actions:** Your body begins to crave alcohol when you start. You will begin to act out of character and do things you normally wouldn't do. It will cause immediate mood swings, slow reflexes and decreased coordination
- viii. **Memory loss:** Your memory will become impaired after consuming large amounts of alcohol. You won't remember anything that happened before you started drinking.
- ix. **Sleep problems:** Alcohol reduces sleep quality.

2. ALCOHOL AND LONG - TERM HEALTH RISKS

Overtime, excessive alcohol use can lead to the development of chronic diseases and other serious problems including:

- i. High blood pressure, heart disease, stroke, liver disease, and digestive problems.
- ii. Cancer of the breast, mouth, throat, esophagus, voicebox, liver, colon, and rectum.
- iii. Weakening of the immune system increasing the chances of getting sick.
- iv. Diabetes: Heavy drinking can lead to diabetes.
- v. Learning and memory problems, including dementia and poor school performance.
- vi. Mental health problems, including depression and

anxiety.

vii. Alcohol use disorders, or alcohol dependence.

viii.Fertility: Regular heavy drinking reduces men's testosterone levels, sperm count and fertility. For women, drinking too much can affect their periods.

3. ALCOHOL AND MENTAL HEALTH RISKS

There are many emotional effects associated with alcoholism. These include depression, anxiety, anger, guilt, shame, loneliness, hopelessness, fear, regret, and feelings of being trapped. Individuals may feel helpless because they cannot quit drinking. Additionally, they may feel guilty about their behaviors. Some people feel ashamed of their drinking habits.

Others feel lonely and isolated because they don't see any way out of their situation.

4. ALCOHOL AND PERSONAL LIFE RISKS

- i. Financial problems due to excessive spending on alcohol/failing to pay bills.
- ii. Limited career opportunities due to a conviction for an alcohol-related offence.
- iii. Impacts on work performance.
- iv. Losing friends because of the way you act when you're drunk.
- v. A limited group of friends, due to constantly socializing with other people who drink to excess.
- vi. Reduced sexual performance.
- vii. Domestic violence/Violent crimes.

viii.Risky sexual behavior: Drinking too much alcohol can lead to risky sex.

ix. Injury: Alcohol can cause injuries such as broken bones, head trauma, internal bleeding, and organ damage.

FAMILY AND RELATIONSHIP PROBLEMS

The effects of alcohol abuse in the community also includes the impact of heavy drinking on your relationships.

1. For instance, a marriage can be significantly impacted by a partner's alcohol abuse. Alcohol- related violence and aggression often contribute to domestic violence, which usually occurs between a person and their spouse or partner.
2. Alcohol can also have a physical impact, affecting a range of things from your ability to contribute to sex or physical intimacy to behavioral changes that can contribute to enabling and codependence. These factors can negatively impact a marriage or a romantic relationship, as well as any other relationships within a family.
3. Children can also be heavily affected by a parent's alcoholism. Kids who grow up with parents who have problems with excessive drinking are more likely to also develop this problem when they get older. Emotional and psychological problems can also develop in children who aren't raised with the affection or care needed from a parent who struggle with heavy drinking.

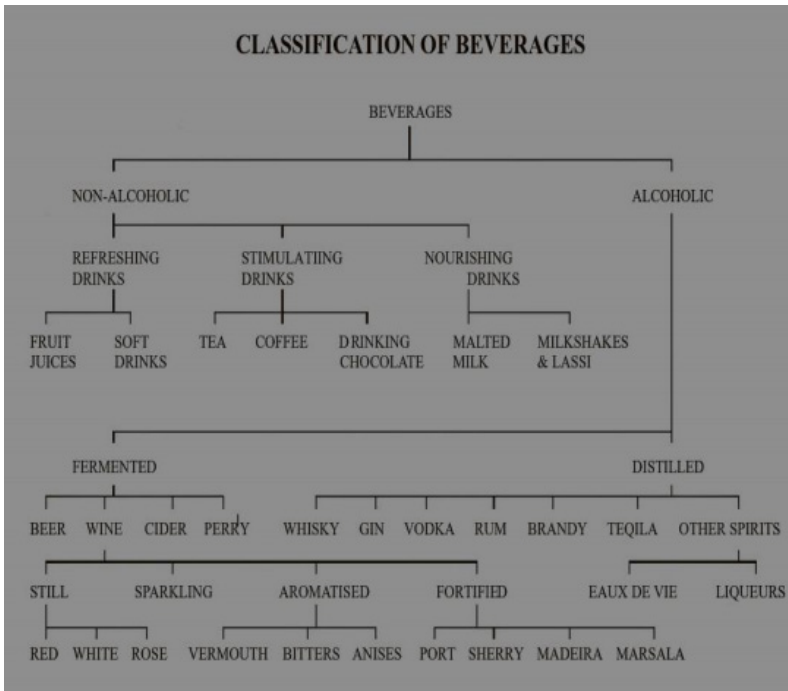

5. ALCOHOL AND SOCIAL LIFE RISKS

- Increased risk of accidents: After drinking heavily, you're less likely to drive safely. You could cause yourself or someone else injury.
- **Violence:** Including homicide, sexual assault, get into fights and intimate partner violence.
- Increased road fatalities.
- Public property damage.
- Increase in work related accidents.

THE WORLD OF BEVERAGES

BEVERAGE

A beverage is a liquid intended for human consumption. In addition to their basic function of satisfying thirst, drinks play important roles in human culture. Common types of drinks include plain drinking Water, Milk, Coffee, Tea, Hot Chocolate, Juice and Soft Drinks. In addition, alcoholic drinks such as Wine, Beer, and Liquor, which contain the drug ethanol, have been part of a human culture for more than 8,000 years.

NON-ALCOHOLIC BEVERAGES

1. WATER

Water is the world's most consumed beverage and is vital to everyone's life. It makes up about 70 percent of your body's weight; hence staying hydrated should be the number one priority. Different forms of water include sparkling, tap, still,

bottled, and many more.

2. JUICES

Juice is enjoyed worldwide and extracted from many types of fruits and vegetables. Fruit juices can be freshly squeezed or concentrated. Some are supplemented with sugar or extra additives or flavourings.

Juice can be a healthy choice for customers because most fruit and vegetable juices are rich in essential vitamins and minerals that the body needs.

3. SMOOTHIES

A smoothie is a mixture of fruits and vegetables, fruit juice, vegetable juice, milk, or even yogurt. Smoothies are relatively thicker and creamier (higher amount of yogurt and ice-creams).

They can be broadly categorized into fruit smoothies, green smoothies, and protein smoothies. With essential vitamins, proteins, and minerals, this delicious drink can help you improve your overall health. Now, you have another healthy choice for serving your target customer's needs.

4. SPARKLING DRINKS

Sparkling drinks or the so-called sodas contain carbonated water, a sweetener, and natural or artificial flavours. You can find these compounds in Coca-Cola Classic, Pepsi, Diet Coke, Mountain Dew, etc.

Sparkling drinks can improve the digestive system and helps with constipation as well. It induces a hungry feeling in the stomach, improving its swallowing ability. With diversified varieties of flavours and significant benefits with health, sparkling has been familiar with consumers and has become more and more outstanding among soft drinks.

5. TONIC WATER

Tonic water is a mixture of carbonated water, quinine,

sugar, high fructose corn syrup, and occasionally some flavourings. A pretty odd component is quinine, which is derived from the bark of the cinchona tree. When you drink tonic water, quinine will have a bitter after taste in your mouth.

Despite the health benefits of quinine like in treating malaria or for reducing leg cramps, be cautious about a significant amount of sugar intake because of this.

6. ENERGY DRINKS

If you feel fatigued, you may need an energy drink for strength in physical and mental terms. It can be ideal if you need to be alert during work or engage in sports.

Energy drinks contain a significant amount of caffeine, sugar, and energy-boosting compounds like vitamins and minerals.

Energy drinks can help you gain quick energy, but remember that nothing is too good to be true! As they contain high levels of stimulanting ingredients and sugar, they can be detrimental to your health with regular consumption

Energy drinks have expanded into two types: Carbonated energy drinks and Non-carbonated energy drinks.

7. MILK

They are created from mammary glands of certain animals such as cows, goats, sheep; milk contains many nutrients such as calcium, vitamin D, phosphorus, and magnesium. Consumption of milk helps in fostering bone health and strengthening the immune system.

8. TEA

You can make tea by pouring hot or boiling water over specific type of leaves, herbs, spices such as lemongrass, cinnamon, lavender flowers, honey, pine needle, ginger, mint, jasmine, rosemary, and many more. It is divided into two main categories: water based tea and milk tea.

On the basis of processing we get four different types of teas which are black, green, white, and oolong. There are many health benefits linked to drinking tea, especially green tea. The antioxidants, and organic compounds found in it result in lowering risks of having heart diseases, cancer, or diabetes.

9. COFFEE

Coffee is a popular beverage used worldwide; you can pour water over the roasted coffee beans to make it. This morning routine helps you to get through the day as it is composed of a certain caffeine level, therefore keeping you awake.

They come in so many different varieties and flavours, such as black coffee, espresso, latte, cappuccino, or mocha.

10. COCOA

Another favourite alcohol-free drink of clients is cocoa, which is made from hot water or milk blended with cocoa powder or melted chocolate. Sugar is added to this concoction to sweeten it..

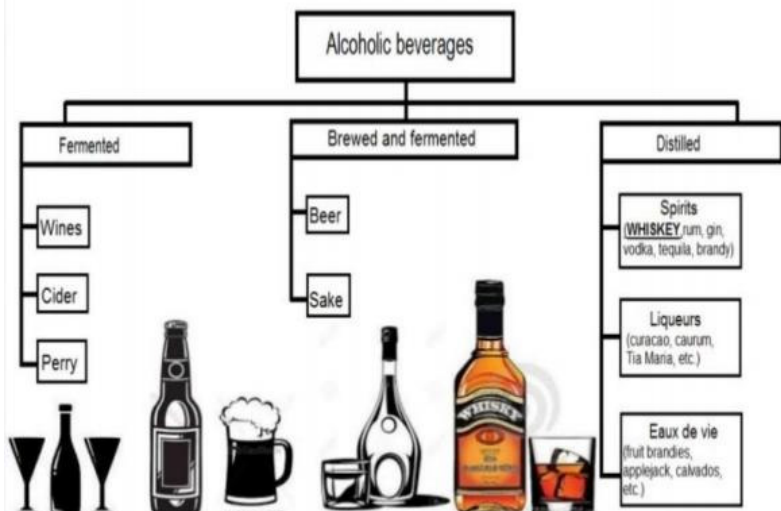

11. MOCKTAILS

Mocktails are blends of two or more juices and other sodas. You might ask how they are different from cocktails, the difference lies in the alcoholic content. Mocktails don't have any kind of alcohol in it. Therefore, they are also called non-alcoholic cocktails.

ALCOHOLIC BEVERAGES

An alcoholic beverage is a drink that containing minimum 0.5 percentage ethanol (commonly known as alcohol). Alcoholic beverages are divided into two general classes, Fermented Alcoholic Beverages and Distilled Alcoholic Beverages

Classification of Alcoholic Beverages

FERMENTED ALCOHOLIC BEVERAGES

Fermented drinks are typically made from fruit juices, herbal infusions, soaked grains, as well as green and black tea that have been allowed to culture or ferment for a period of time. Fermented beverages can be divided into two groups, Wines and Beers. Wines are fermented from various types of fruit juice containing fermentable sugars. Beers come from starch-containing products, like cereals which undergo enzymatic splitting by diastase, malting, and mashing, before the fermentable sugars become available for the yeasts and bacteria.

DISTILLED ALCOHOLIC BEVERAGES

A distilled alcoholic beverage is a consumable liquid containing ethyl alcohol (ethanol) purified by distillation from a fermented substance such as fruit, vegetables, or grain. Generally distilled beverages are classified into two classes the Liquor and Liqueur.

LIQUOR AND LIQUEUR

The words “liquor” and “liqueur” are so similar that it is easy to confuse the two. Although both are distilled spirits that contain alcohol and are crucial ingredients while mixing cocktails, the liquids are not the same and the terms are not interchangeable.

LIQUOR

Liquor, also known as spirits, is an alcoholic beverage made from grains or other plants that are fermented into a potent drink. Though a few others fall into this category, it's generally accepted that there are six types of distilled spirits or liquors: **Brandy, Gin, Rum, Tequila, Vodka and Whiskey**. The distillation process, which occurs after fermenting, separates the water from the alcohol. This process increases the alcohol content of liquor to at least 20 percentage alcohol by volume (ABV). Brandy, Rum, Tequila, and Vodka are generally 40 percentage ABV, while Whiskey usually ranges from 40 percentage to 55 percentage ABV. Gin can range from 37.5 percentage to 50 percentage ABV. Liquors are the base of cocktails and mixed drinks and are also very often drunk on the rocks and neat.

FLAVOURED LIQUOR

Liquor is available today in many flavoured form. The flavour is usually added after distilling through a steeping process, much like how vinegar and oils are infused.

LIQUEUR

Technically, liqueurs are liquor because they are distilled spirits. The general difference is that

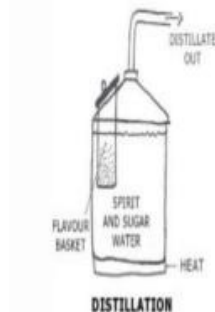

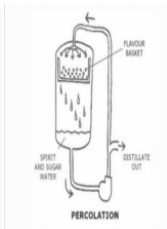

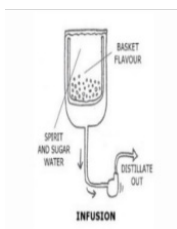

Liqueurs are sweetened spirits with various flavours, oils, extracts and colour which is added to it. Rum, Whiskey, Brandy, and other liquors can serve as a base spirit for liqueurs.

In the past, liqueurs were referred to as cordials, and most of them have a history that stretches back centuries because they were often used medicinally.

The alcohol content of liqueurs tends to be lower than liquors because of the additives, but this is not always the case. They can range from a low 15 percentage ABV (30 proof) to a strong 55 percentage ABV (110 proof), so potency is not a distinguishing factor.

Liqueurs are used in a wide variety of creative and legendary cocktails. They are the ingredients that usually make the drink extra special. Most of them can also be enjoyed neat, chilled, or on the rocks.

LIQUEUR PRODUCTION PROCESS

Infusion/Maceration

Fruit liqueurs are produced by the infusion method, in which fruit is steeped in the spirit, which absorbs aroma, flavour, and colour. This is better for soft fruit that would disintegrate if distilled. The fruit or herbs are left sitting around in neutral spirit until they absorb the flavour. The mixture may be heated slightly, and different herbs and fruits may be added at different times depending on how long it takes to extract their flavour.

Percolation

Just like making filter coffee: put your (hard) ingredients into a filter and drip alcohol down through them.

Distillation

Add your flavouring agents (herbs, fruits) to the spirit and re-distill it. Distillation is normally used for harder ingredients like fruit peels, seeds, and roots, and produces a clear distillate.

TYPES OF LIQUEURS

Cream Liqueurs

A cream liqueur is a specific type of liqueur that is dairy-based with oil-in-water emulsion containing sufficient alcohol to inhibit microbial growth. Cream liqueurs typically contain cream, protein, sugar, alcohol, flavours, colours, and emulsifiers.

Crème de Liqueurs

A crème de liqueur (not to be confused with cream liqueur) is a liqueur that has a great deal of additional sugar added to the point that it has a syrup like consistency. Unlike cream liqueurs, crème de liqueurs include no cream in their ingredients. “Crème” in this case refers to the consistency.

Chocolate Liqueurs

This liqueur tastes like chocolate. Chocolate liqueur can be consumed straight, as an after dinner drink rather than as an aperitif. It is used in mixed drinks and in desserts, especially in dessert sauces, cakes, and truffles.

Fruit Liqueurs

Fruit liqueur a liqueur made chiefly by a maceration process from fruit and neutral spirits or brandy.

Coffee Liqueurs

Coffee liqueur is the combination of two of the world's most favourite drinks coffee and alcohol — coffee liqueur is widely popular with those who love sweet cocktails.

Nut Liqueurs

Nut Liqueur is a member of the wider liqueur family. A wide variety of nuts or nut combinations may be used in nut liqueurs but almond (as in Amaretto), hazelnut and walnut are the most traditionally used ones.

Herb Liqueurs

Herbal Liqueurs are very popular, and there are many famous examples often made by Monks. A number of herbal liqueurs were first created for medicinal purposes.

GENERIC LIQUEUR BRANDS

Generic liqueurs, marketed under accepted common names, frequently vary according to brand because of formula differences. They include crème d'ananas, crème de cacao, flavoured with cocoa and vanilla beans; crème de framboises, made from raspberries; crème de menthe, mint- flavoured; crème de noyaux, with bitter-almond flavour derived from fruit stones; crème de violette, with oils from both violets and vanilla beans; Curaçao, with flavour from the dried peel of the green oranges of the island of

Curaçao etc.

PROPRIETARY LIQUEUR BRANDS

Proprietary brands, usually prepared from secret formulas, are made by individual producers, who market their products under registered brand names. French proprietary brands include Bénédictine, a plant liqueur first produced in 1510 from one of the most closely guarded of all formulas; Chartreuse, made from a formula developed in 1607, Cointreau, a proprietary brand of Triple Sec; Grand Marnier, produced in the Cognac region, an orange Curaçao; and Vieille Cure, a plant liqueur made in Bordeaux. Italian liqueurs include Liqueur Galliano and Strega, both with spicy flavours. British brands include Drambuie, with Scotch whisky as a base and flavoured with honey, made from a French formula taken to Scotland in 1745; and Irish Mist, a spicy liqueur made with Irish Whiskey and honey. Liqueurs manufactured in the United States include Forbidden Fruit, made with brandy and grapefruit; and Crème Yvette, with violet flavour and colour. Coffee- flavoured brands include Kahlúa, from Mexico etc.

LIQUEUR BRANDS

Fernet	Jägermeister Cold Brew	Bicerin

SERVING STYLES OF ALCOHOLIC BEVERAGES

1. Neat

A drink served "neat" is a single, unmixed liquor served without being chilled and without any water, ice, or any other mixer.

2. On the rocks

"On the rocks" refers to liquor poured over ice cubes, and a "rocks drink" is a drink served on the ice rocks. Rocks drinks are typically served in a rocks glass, highball glass, or Collins.

3. Straight up

Ordinarily referred to an alcoholic drink that is shaken or stirred with ice and then strained and served in a stemmed glass without ice.

(A) BITTERS

Bitters are a type of flavouring agent used primarily in cocktails and culinary dishes. They are typically made by infusing high-proof alcohol with various herbs, spices, roots, and other botanicals. The result is a concentrated, aromatic liquid with a strong, often bitter taste. Bitters are used in small amount to add complexity, depth, and balance to both drinks and food. Some popular brands include Angostura and Peychaud’s.

Bitters come in various types, each with unique flavours and uses. Here are some common categories:

- 1. **Aromatic Bitters:** Often used in classic cocktails like the Old Fashioned or Manhattan these bitters have a

complex flavour profile with spices and herbs. Examples include Angostura Bitters and Peychaud's Bitters.

2. **Citrus Bitters:** These add a zesty, citrusy note to drinks and dishes. Examples are Regan's Orange Bitters and Fee Brothers Orange Bitters.
3. **Herbal Bitters:** These bitters emphasize herbal flavours, often used for their digestive benefits. Examples include Fernet-Branca and Amaro.
4. **Spiced Bitters:** Infused with spices like cinnamon, clove, or cardamom, these bitters add warmth and complexity. Examples include Bittermens Xocolatl Mole Bitters and Bittercube Cherry Bark Vanilla Bitters.
5. **Fruit Bitters:** These incorporate fruits to impart a fruity but bitter flavour. Examples are Bittermens Grapefruit Bitters and Fee Brothers Peach Bitters.

MAKING PROCESS OF BITTERS

The making process of bitters typically involves the following steps:

1. **Selection of Botanicals:** Choose a variety of herbs, roots, bark, seeds, and other plant materials to create a unique flavour profile.
2. **Cleaning and Preparation:** Clean and prepare the botanicals for infusion, which may include drying, chopping, or grinding.
3. **Infusion:** Steep the botanicals in a neutral spirit, such as Vodka or Rum, to extract their flavours and oils.
4. **Steeping Time:** Allow the mixture to steep for several days or weeks, depending on the desired intensity of flavours.
5. **Strain and Filter:** Strain the mixture through a cheesecloth or a coffee filter to remove the solids.
6. **Secondary Infusion:** Some bitter's recipes involve a

secondary infusion with additional botanicals to add more complexity.

7. **Blending:** Combine the infused liquid with other ingredients, such as water, glycerin, or sweetener, to achieve the desired consistency and flavour.
8. **Aging and Maturation:** Allow the bitters to age and mature for a few weeks or months to develop a smoother flavour.
9. **Filtration and Bottling:** Filter the bitter again before bottling and distributing it.
10. **Quality Control:** Taste and adjust the bitter to ensure consistency and quality.

Note: Different manufacturers may have variations on this process, and some may use modern technologies or techniques to streamline production.

NON - ALCOHOLIC BITTERS

These are designed to mimic the flavour of traditional bitters without the alcohol content, making them suitable for various dietary preferences and non-alcoholic beverages.

Non-alcoholic bitters are useful for adding complexity to mocktails, sodas, and culinary dishes.

MAKING PROCESS OF NON ALCOHOLIC BITTER

Making a non-alcoholic bitter involves a process similar to making traditional bitters but without alcohol. Here's a basic recipe you can follow:

INGREDIENTS:

- **Bitterness Source:** You can use ingredients like gentian root, dandelion root, or wormwood.
- **Flavouring Agents:** Herbs, spices, and citrus peels (e.g., cardamom, cinnamon, cloves, orange peel).
- **Base Liquid:** Water or a non-alcoholic liquid such as apple cider vinegar or vegetable glycerin.

- **Sweetener (Optional):** Simple syrup or honey to balance bitterness.

INSTRUCTIONS:

1. **Prepare the Ingredients:** Chop or grind the bitterness source and flavouring agents to increase surface area.
2. **Infuse the Ingredients:** Combine the bitterness source and flavouring agents in a clean jar.
Cover with the base liquid (water, apple cider vinegar, or vegetable glycerin). Ensure the ingredients are fully submerged.
Seal the jar tightly.
3. **Steep the Mixture:** Let the mixture sit in a cool, dark place for 1–2 weeks, shaking it gently every day to mix the contents.
4. **Strain the Liquid:** After steeping, strain the mixture through a fine mesh strainer or cheesecloth to remove the solid ingredients.
Transfer the strained liquid into a clean bottle or jar.
5. **Adjust the Flavour:** Taste the bitter and adjust its sweetness by adding simple syrup or honey as per taste or requirement. Stir well to combine it.
6. **Bottle and Store:** Store your non-alcoholic bitters in a sealed container. They can be kept in the refrigerator or a cool, dark place.

Notes: Flavour Profile: Adjust the quantity and types of herbs and spices to achieve your desired flavour profile.

Non-Alcoholic Base: Apple cider vinegar adds a tangy flavour, while vegetable glycerin provides a slightly sweet and at hick texture.

(B) VODKA

Vodka is a clear distilled alcoholic beverage with different varieties originating in Poland, Russia and Sweden. It is comprises primarily of water and ethanol, but sometimes with traces of impurities and flavourings. Traditionally it is made by distilling the liquid from cereal grains that have been fermented, with potatoes, arising as a substitute in more recent times, and some modern brands using fruits as the base. In the past, vodka was taken as a neutral spirit, but in the 20th century, the flavoured vodka drinks became popular. Once the process of distillation is completed, essences of herbs, fruits, grasses, and spices are used to add the flavour in vodka. Vodka typically has an alcohol content ranging from **40% to 50% alcohol by volume (ABV)**

TYPES OF VODKA

Fruit vodka

Fruit vodka is a type of vodka that is made from fruits. Some of the most common fruits used in fruit vodka include cranberries, raspberries, and blackberries.

The production process for fruit vodka begins with the selection of fresh fruit. The fruit is then cleaned and chopped into small pieces. The chopped fruit is then added to a still

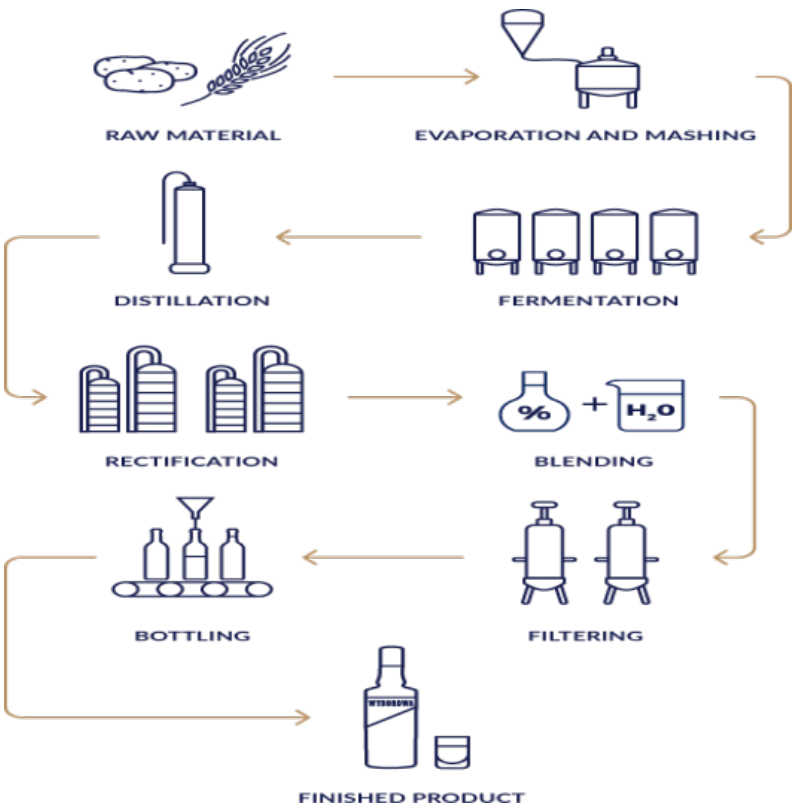

and heated to produce vapor. The vapor is then condensed to produce fruit vodka.

The average alcohol by volume (ABV) of fruit vodka is around 40 per cent. However, some fruit vodkas can have an ABV as high as 50 percent.

Flavoured vodka

Flavoured vodka is different from fruit vodka because it is typically made by infusing the spirit with flavours, such as Apple or Orange. Fruit vodkas are made from fermenting a type of fruit for a certain time and then distilling it.

VODKA MAKING PROCESS

1. Mashing

Unlike in the past, modern technologies have been invented and all the grains or vegetables are loaded into automatic mash tub machines. As the tub starts to rotate, the raw materials are broken down, and then grounded malt meal is added to facilitate the conversion of the starch to sugar.

2. Inoculation And sterilization

This is an essential stage as it will prevent the growth of bacteria. The sterilisation is carried out by heating the mash at the boiling point. Lactic-acid bacterias are added to the mash to facilitate fermentation by increasing the acidity levels. As soon as the desired acidity level is achieved, the mash is inoculated.

3. Fermentation

The sterilised mash is now poured into stainless steel vats, and the yeast is added before the vats are sealed. This is left for a period of 2 to 4 days, and the yeast enzymes will convert the sugars in the mash to ethyl alcohol.

4. Distillation

The ethyl alcohol produced is in a liquid state and is pumped into large stainless steel columns that have vaporisation chambers on top. The alcohol is heated with steam while being cycled up and down to produce vapours, which are then condensed. All impurities are removed at this stage.

5. Compilation

The vapours are concentrated and recorded at the alcohol levels of 95-100%, which is a very high proof of about 190. This is quite toxic, and to make the vodka drinkable, water is added so as to lower the proof to about 80, which translates to 40% alcohol content.

6. Bottling

Finally, the alcoholic beverages are stored in glass bottles. Glass is non-reactive and will not interfere with the chemical composition of vodka. In most distilleries, the bottling process entails cleaning, filling up, capping and then sealing.

(C) RUM

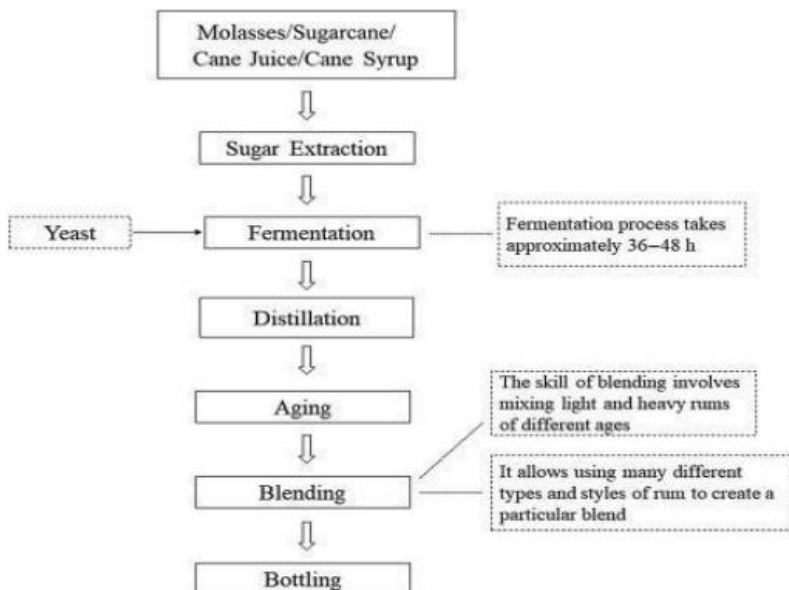

Rum is a liquor made by fermenting then distilling sugarcane molasses or sugarcane juice. The distillate, a clear liquid, is usually aged in oak barrels. Most Rums are produced in Caribbean and American countries, but also in other sugar-producing countries, such as the Philippines and India. Rum typically has an alcohol content ranging from 40% to 50% alcohol by volume (ABV) .

RUM PRODUCTION PROCESS

There are two production methods - Traditional Rums and Agricultural Rums. Traditional Rums are made from a molasses base, a by-product from the production of sugar cane. Agricultural Rums are made from sugar cane juice and then fermented and distilled.

1. Fermentation

Sugarcane juice or other derivative are allowed to rest, yeast in the air is attracted to the natural sweetness of the liquid, or yeast and water are added to vats. Fermentation occurs as sugars are converted by yeast into alcohols. It can be as short as 24 hours or as long as three weeks, depending on the strain of yeast used and the style of rum being produced.

2. Distillation

Fermented liquid is heated in a sealed vessel (pot or continuous still) to get concentrated alcohol.

3. Aging & Blending

Distilled liquor is poured in a wood cask to age. It requires aging for at least one year. Aging process determines the colour of the rum. After aging different distillates are blended for consistent flavour.

4. Bottling

The majority of Rum is bottled at 40% alcohol by volume, though there are some exceptions, including over Proof Rums which can reach higher volume.

TYPES OF RUM

1. **Light Rum:** Also called white or silver rum. These rums are generally aged in stainless steel tanks for up to a year and filtered before bottling.
2. **Dark Rum:** Made from caramelized sugar or molasses and aged for a longer time, in heavily charred barrels, giving them stronger flavours.
3. **Gold Rum:** Also referred to as amber rum, it is both rich and smooth. Aged in wooden barrels, usually the charred white oak barrels that give it its dark colour.
4. **Overproof Rum:** Very high alcohol content. Always diluted and used in mixed drinks.
5. **Flavoured Rum:** Natural and artificial ingredients added for desired flavour. Flavours are infused after the fermentation & distillation.
6. **Spiced Rum:** Various spices like cinnamon, rosemary, aniseed, pepper, cloves, cardamom are added for flavour.

(D) GIN

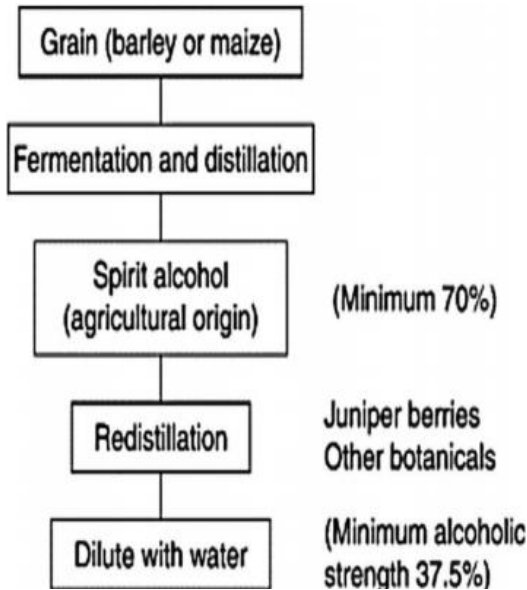

Gin is a distilled alcoholic drink that derives its predominant flavour from juniper berries (*Juniperus communis*)

Gin originated as a medicinal liquor made by monks and alchemists across Europe, particularly in Southern France, Flanders and the Netherlands, to provide aqua vita from distillates of grapes and grains. Gin generally has an alcohol content of around 37.5% to 50% alcohol by volume (ABV).

GIN MAKING PROCESS

Compound Gin

This is the process that would be used if you were to make your gin at home; if you see a bottle of gin made this way on a store shelf, it's probably best to leave it there. Opt for a compound gin if you're crafting it yourself! To make a compound gin, you start with a base spirit – vodka is commonly used – add the botanicals of your choice, allow them to be infused for a day or two, strain the solution, and enjoy! In this process, you are not redistilling at any stage.

Distilled Gin

Also known as pot-distilled gin, this is the process by which a base spirit is distilled, then a mix of botanical ingredients is soaked and infused into the spirit. The botanicals are then removed, and it is redistilled.

Column-Distilled Gin

The main difference in this process is that the botanicals are infused during the distillation process, whether the spirit is vaporised and runs through an infusion chamber or whether the botanicals are suspended in the column during distillation. In this process, a highly concentrated spirit is distilled, the mix of botanicals is added, and then the spirit is redistilled with botanicals.

(E) TEQUILA

Tequila is a Mexican distilled beverage made from the blue agave plants grown in the state of Jalisco and in selected municipalities in the states of Guanajuato, Michoacán, Nayarit, and Tamaulipas. It is a type of mezcal, a broader category that includes spirits made from other types of agave plants. Tequila typically has an alcohol content of around 35% to 55% alcohol by volume (ABV).

TEQUILA MAKING PROCESS

1. **Shredding the agave:** By shredding the agave piña (fruit/succulent core) through three separate shredding processes, the agave fibers are prepared for sugar extraction.
2. **Extraction:** A diffuser extracts the sugar within the shredded agave fibers using a gentle extraction process,

producing a solution of water and agave sugar. Agave juice can then be obtained from this solution, as can bagasse, which is later used as compost for the agave plantations.

3. **Cooking:** Agave contains complex sugars, like inulin, that gets transformed into fermentable sugars through a hydrolysis process. The hydrolysis process takes about 6 hours to convert inulin into fructose and glucose.
4. **Fermentation:** Anaerobic fermentation is carried out in stainless steel tanks using a proprietary blend of yeasts and nutrients. Each round ferments for 24-28 hours with varying temperatures, from 32°C (89.6°F) to 37°C (98.6°F).
6. **Distillation:** The first distillation process takes place in steel distillation columns, during which water is removed and alcohol is concentrated from the fermented agave juice. The second distillation takes place in stills to obtain tequila with a range of 55-65% alcohol, depending on the brand. All of the distilled by-products are treated in a wastewater treatment

plant, in full compliance with environmental regulations.

5. **Filtration:** Every tequila is filtered using slightly different methods. We use carbon filters, through which tequila is filtered in cold temperatures to remove the excess fatty compounds that give tequila a cloudy appearance. Other filtration processes assure that there are no particulates present in the liquid, and ultimately work to give our tequila a shiny finish.
6. **Aging:** “Reposado” tequila is aged in white oakwood containers for at least 2 months. Aged, or “añejo” tequilas are kept in white oak barrels for at least 12 months, and extra-aged tequilas are kept in white oak barrels for at least 36 months.
7. **Blending & Assembling:** In this process, demineralized water is added to the tequila to adjust its gradation, and tests are conducted to assure good consistency.

TYPES OF TEQUILAS

1. **Blanco Tequila (Silver):** Blanco Tequila is a clear white spirit that’s bottled and packaged immediately after distillation. This is tequila in its purest form, the closest expression of the agave’s natural flavours.
2. **Joven Tequila (Gold):** Rarer than the other types, but exciting nonetheless, Joven tequila is, in its basic form, a Blanco tequila blended with other aged tequilas. This type is usually coloured with caramel, syrups, or other additives.
3. **Reposado (Aged):** Also known as rested or aged tequila, Reposado is what becomes of Blanco tequila after being stored in American or French oak barrels. Reposado Tequila is the bridging point between the flavours of young Blanco tequilas and the complexity of Añejo tequilas.

4. **Añejo (Extra Aged):** Tequila that has been stored and left to mature in a barrel for longer than a Reposado, is an Añejo Tequila. It's aged for a period ranging between 1 to 3 years and takes on a darker form and richer taste due to its prolonged interaction with the wood.
5. **Extra Añejo (Extra, Extra Aged):** Tequila aged in a barrel for more than 3 years, qualifies as an Extra Añejo Tequila. It comes with a smoother taste than the other subcategories of Tequila, and is usually placed at a higher price point.

TRADITIONAL WAY TO DRINK TEQUILA

To properly take a shot of tequila, you need salt, lime, and tequila, all carried out in a specific order. The mantra to remember is “lick, shoot, suck”: Lick the salt off of your hand first, drink the shot swiftly, and finish by sucking on a wedge of lime.

TEQUILA VS MEZCAL

Technically, every tequila is a mezcal. The term mezcal refers to spirits made from the agave plant, while tequila refers to a specific type of mezcal that can only be made from blue weber agave in five Mexican states. Mezcal can be made from a wide variety of agave varieties in nine Mexican states.

(F) BRANDY

Brandy is a liquor produced by distilling wine. Brandy generally contains 35–60% alcohol by volume (70–120 US proof) and is typically consumed as an after-dinner

digestive. Some brandies are aged in wooden casks. Others are coloured with caramel colouring to imitate the effect of aging, and some are produced using a combination of both aging and colouring. A variety of wine brandy can be found across the wine-making world. Among the most renowned are Cognac and Armagnac from south-western France.

BRANDY MAKING PROCESS

1. Base wine

The base wine from which brandy is distilled is made primarily from the Colombar and Chenin grapes in South Africa. Other varietals are used in smaller quantities to add depth. The juice is extracted via a freerun process, which means the grapes are not pressed to extract the juice. This

eliminates a lot of side elements such as tannins from the stems and skins, which would get concentrated during the distillation and result in unwanted tastes and aromas.

Once the base wine has fermented as per normal fermentation processes, it is ready to be distilled.

2. Distillation

There are two main types of distillation used in making brandy, Pot still Distillation, and Column still distillation. For most of South Africa's premium brandies, Pot still distillation provides the majority of the end spirit, so that is the one we will focus on for now.

The base wine is heated in the pot still until the alcohol starts to evaporate from the wine. As the steam rises, it is captured at the top of the pot still by a pipe system that then cools the evaporated alcohol and converts it back into liquid. This alcohol, now known as "Low wine" (at around 22% volume), is then captured in thirds for purity reasons.

The first third, known as the "heads" is not used in making brandy, nor is the last third known as the "tails". Only the middle third of this low wine, known as the "heart" is used for the final brandy. The heart of this low wine is then put back into a fresh pot still and distilled again.

The same process occurs again, in the second distillation, resulting in the end spirit, which now has roughly 70% alcohol. Again, only the heart fraction is kept and put into oak barrels for ageing.

3. Maturation in oak

This is the most important stage of making brandy. When the final spirit comes out of the pot still, it is a clear white alcohol, infused with the double concentrated flavours and aromas of the original base wine used. Through maturation of the spirit in oak barrels for a said number of years, it is given its final character.

4. Blending and Bottling

Once the brandy has finished its maturing, the master distiller will select different brandies from different barrels and work out each of their individual characteristics. Then, depending on the final style of brandy they wish to make, each will be blended meticulously over and over again until the right balance of nose and flavour is reached, critically ensuring that what is promised on the nose is followed through to on the palate.

TYPES OF BRANDY

1. **Cognac:** Arguably, the world's best known and probably the finest form of brandy, Cognac takes its name from the town in the country's South West. Just like Champagne, the spirits here are protected by a 'geographical appellation' with strict norms on production – the grapes have to originate from one of the six zones/districts within the Cognac region and must be stored in Limousin casks for a minimum of 2 years. These six districts are ranked in terms of quality, with the Grande Champagne (not to be confused with the Champagne region) at the top of the tree. You might be familiar with some of the grades of Cognac from VS – Very Special (the youngest brandy in the blend has to be stored for at least two years) to VSOP (Very Superior Old Pale) stored for at least four years and XO in which the youngest brandy in the blend has to be at least six years old (This will soon become 10 years as per the new rules laid out by the BINC – Bureau National Inter professional du Cognac).
2. **Armagnac:** The oldest brandy distilled in France, but not as popular as Cognac, given its small production volumes. The Armagnac Geographic Appellation is further South of Cognac, and the spirit became popular

around the 14th and 15th centuries

3. **Fruit Brandy:** It is typically crafted by distilling wine or fermenting mashed fruits aside from grapes. These are not to be confused with fruit-infused brandy liqueurs with the usual grape brandies with fruit flavours. These brandies are actually extracted from fruits as diverse as raspberries (Framboise) and cherries (Kirsch). Some of these work well in desserts and also as digestives. In Southern Germany, some Schnapps are made with fruits (also known as Obstler) like peaches, pears and apples.
4. **Pomace Brandy:** It is distilled from the pomace left over after winemaking, once the grapes are pressed. These brandies are usually not aged or coloured and can be stronger. Grappa (From Italy), Peruvian Pisco and Orujo from Spain are some of the world's best-known Pomace brandies.

(G) WHISKY

Whiskey is a type of distilled alcoholic beverage made from fermented grain mash. Various grains (which may be malted) are used for different varieties, including barley, corn, rye, and wheat. Whisky is typically aged in wooden casks, generally made of charred white oak. Whiskey generally has an alcohol content of around 40% to 50% alcohol by volume (ABV).

- WHISKEY PRODUCTION PROCESS -

1. Malting

Every whisky starts as a raw grain—in the case of malt whisky, barley, which is specially treated to access its sugars. The barley is moistened and allowed to partially sprout, or germinate, a process called malting, which

secretes an enzyme that converts the barley's starches to sugars. Germination is cut off when the barley is dried by heating.

2. Mashing

The sugars contained in the grain must be extracted before fermentation, and this is done through mashing. The grains that are being used—like corn, wheat, or rye—are ground up, put in a large tank (called a mash tun or tub) with hot water, and agitated. Even if the distiller isn't making malt whisky, some ground malted barley is typically added to help catalyze the conversion of starches to sugars. The resulting mixture resembles porridge. Once as much sugar as possible has been extracted, the mixture—now known as mash or wort (if strained of solids)—moves on to the fermentation stage.

3. Fermentation

Fermentation occurs when the mash/wort meets yeast, which gobbles up all the sugars in the liquid and converts them to alcohol. This takes place in giant vats, often called as washbacks. The process can take, 48 to 96 hours, with differing fermentation times and yeast strains resulting in a spectrum of diverse flavours. The resulting beer-like liquid—called distiller's beer or washclocks in at around 7%–10% ABV before it goes into the still.

4. Distillation

The process of distilling increases the alcohol content of the liquid and brings out volatile components, both good and bad. Stills are usually made of copper, which helps strip spirits of unwanted flavours and aromatic compounds. The two most common types of stills—pot stills and column stills—function differently. Both are outlined below.

5. Ageing

Nearly all whiskies are aged in wood—usually oak—containers. One notable exception is corn Whiskey, which may be aged. Bourbon, rye, and other types of American Whiskey must be aged in new charred oak barrels, while for other countries' styles, the type of oak and its previous use are generally left up to the producer. Barrels are stored in warehouses, and as the whisky matures, some of the alcohol evaporates: This is known as the angels' share, and it creates a distinct (and lovely) smell in the warehouse. Some whiskies, such as scotch, have a required minimum age.

6. Bottling

Once matured, whisky is bottled at a minimum of 40% ABV. The whisky must be chill-filtered or filtered in another way to prevent it from becoming cloudy when cold water or when ice is added to it. For most large whisky brands, a bottling run combines a number of barrels—anywhere from a few dozen to hundreds—from the distillery's warehouses. When only one barrel is bottled at a time, it's labelled as single cask or single barrel.

TYPES OF WHISKY

1. SCOTCH WHISKY

Scotch whisky is generally made from malted barley or grain with the spirit aged in oak casks for more than three years. Entirely made in Scotland, Scotch is divided into five distinct categories that include single malt, single grain, blended malt, blended grain and blended scotch whisky. Scotch has an earthy and smoky flavour.

- **Single Grain:** Despite the name, single grain Scotch can incorporate other whole cereal grains (malted or unmalted) into the mash. The whisky must be distilled

at a single distillery, and it can be distilled continuously in continuous stills or column stills.

- **Blended Malt:** A blend of single malt Scotch whiskies from at least two different distilleries.
- **Blended Grain:** A blend of single grain Scotch whiskies from at least two different distilleries.
- **Blended Scotch:** A blend of single malt and single grain Scotch whiskies.

2. IRISH

This Whiskey is made in Eire (Republic of Ireland) or in Northern Ireland. It is made from yeast-fermented grain mash or a mash of malted cereals and takes about three years to age in a wooden cask. Irish Whiskey has a smoother finish as compared to scotch.

3. BOURBON

Bourbon is a distilled American Whiskey, primarily made from corn and is stored in charred oak casks and does not contain any additives. A slightly sweet tasting Whiskey, bourbon is also a bit smoky and has a reddish colour due to fermentation in charred oak casks.

4. TENNESSE

Tennessee Whiskey is a type of Whiskey produced in Tennessee in the United States. The difference between Tennessee Whiskey and bourbon lies in the method of filtering. Tennessee Whiskey is steeped in charcoal before going into the casks for fermentation.

5. RYE

Rye Whiskey is primarily made in North America with a mash of at least 51 percent rye and is aged in charred barrels for at least two years. Rye is a type of grass that is a member of the wheat family. This whiskey has a slight fruity and spicy flavour and is great for making whiskey cocktails.

6. JAPANESE

Japanese whisky is a type of whisky produced in Japan. This whisky uses double malted or peated barley and is aged in a wooden cask. Unlike the other whiskies, it is drier and smokier and comes as single malts or blends.

(H) FENI

Feni is a traditional liquor distilled from the fermented juice of cashew apples. It is safe to drink as it is free from organic or artificial flavours. The name “feni” is derived from the Sanskrit word phena, which means froth. It is because bubbles form a light froth when the liquor is shaken in a bottle or poured into a glass. Feni is a part of Goan food traditions since last 400 years. Unlike other liquors, it doesn't

give you a hangover. It also got the Geographical Indication (GI) certificate in 2009. In 2016, the Goan government initiated the process of declaring it a heritage drink.

It has a strong fruity flavour, a peculiar taste, a very strong and astringent smell. The alcohol content in Feni is **43-45%**, which makes this drink very strong and smelly. The aroma is indicative of a carefully crafted Feni. The medicinal properties of Feni are unique. Feni has been used for treating sicknesses such as worm sickness in children, cold, body ache, fever or flu, toothache, fresh wounds and cuts, cramps and cold due to chilly weather, low blood pressure, irregular movement of bowels, loss of sleep foraged people, diarrhoea, etc.

TYPES

The two popular types of Feni in Goa are- Coconut Feni and Cashew Feni. In terms of production, Coconut Feni is older than Cashew Feni. Originally the locals made Feni with coconut, which was abundant in Goa. But later cashew tree was introduced to India by the Portuguese colonists, which became the new source of this liquor.

CASHEW FENI

Also called '*kaju feni*', kaju being the local name for cashew, this is made from ripe cashew apples. However, interestingly only those apples are selected that have fallen to the ground. They are not picked from the trees. They are then de-seeded and kept in a place for stomping, which is called '*colmbi*'. Stomping brings out the juice. This has been the traditional process followed since long time. Increasingly now, a riping cage is used for the stomping. The pulp is patted with hand into small mounds and a weight is kept on the top. This brings out the juice (neero), which can be consumed.

Traditionally, the juice has been transferred into a large pot and buried in the ground for three days for fermentation.

But now, plastic drums are being used for storing instead of pots. However many places still use the pot. It is then boiled in an earthen pot. Copper pots are increasingly replacing these earthen pots used for boiling. They are called 'bhanns'. Cold water is poured continuously, or a coil is immersed in the cold water for condensing the distillate. The distilling process is called 'bhatti'. No nutrients or artificial yeast are added to speeding up the process.

Cashew Feni is distilled thrice. The first distillate, called '*urrack*' has 15% alcohol content. It is then mixed with *neero* and distilled again to obtain '*cajulo*'. Finally, *cajulo* is distilled again with *urrack* to obtain Feni.

COCONUT FENI

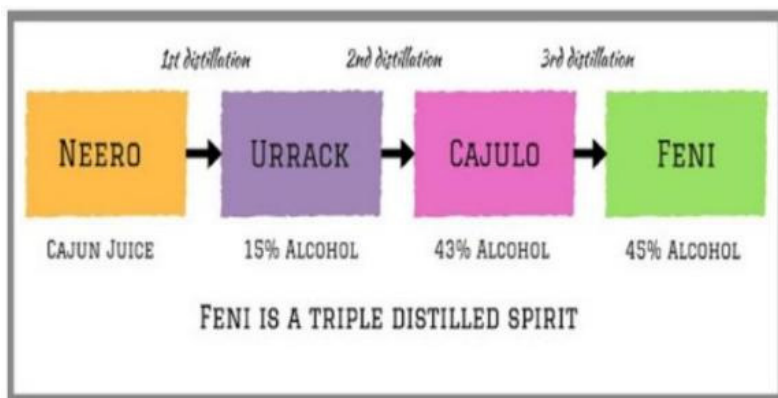

Coconut Feni is made from the flowers of the palm tree. The juice is first collected from the flowers in a process called '*toddy tapping*'. The tapper is called the '*rendier*'. This process to collect the toddy has been practised not just in Goa, but in the entire south-east Asia for centuries.

An earthen pot called '*damonem*' or '*zamono*' is placed at the base of the coconut leaves. Toddy is gathered hereafter by tapping with a stick. This toddy is collected twice every day, in the morning and the evening. It then flows into a second container called '*dudhinem*' after flowing down the tree. Finally, it is poured into a clay pot.

It is kept in another pot called '*jhallo*' or '*monn*' for 3 days for fermentation. The Feni is prepared in a distillery called '*soreachibhatti*'.

Coconut Feni is distilled twice. The first product, which has 15% alcohol content, is known as '*mollop*'. It is then mixed with toddy in a 4:1 ratio and distilled again.

MAKING PROCESS

The first step in making Feni is by crushing cashew apples manually on a hilltop rock shaped like a basin. Juice from crushed cashew apples flows out of the basin to an earthen pot or copper pot, which is buried deep under the ground for fermentation. Then, the juice is distilled by boiling over a woodfire. The juice in the pot undergoes various steps of vaporisation and distillation, where only 4% of the fermented juice becomes alcohol.

THE DISTILLATION PROCESS

The distillation process is done thrice. The juice obtained at the first phase of the distillation process is called Urrack, which is light and diluted. Urrack is further distilled into what is known as Cazulo. Cazulo has strong intoxicating properties and is not common in the local market. The end product of distillation is Feni.

URRACK

While Feni is a double-distilled alcoholic drink derived from the fermentation of ripe cashew apple juice, Urrack is a product of the first single distillation phase, completed in early spring. Urrack may contain sediments of the cashew apple, and has a very low shelf life compared to the fenny,

and must be consumed as fresh as possible after the extraction.

Thus, in the first single distillation process, Urrak is obtained, and it contains 10–15% of alcohol.

(I) BEER

Beer is one of the oldest and most widely consumed alcoholic drinks in the world, and the third most popular drink overall after water and tea. Beer is brewed from cereal grains, most commonly from malted barley, though wheat, maize (corn), and rice are also used. During the brewing process, fermentation of the starch sugars in the wort produces ethanol and carbon dioxide in the resulting beer. The alcohol content of beer typically ranges from about **4% to 6% alcohol** by volume (ABV).

BEER MAKING PROCESS

Step 1: Milling the grain

Beginning in the brew house, different types of malts are crushed together to break up the grain kernels to extract fermentable sugars to produce a milled product called grist.

Step 2: Mash Conversion

The grist is then transferred into a mash tun, to get mixed with hot water in a process called mash conversion. The conversion process uses natural enzymes in the malt to break the malt's starch down into sugars.

Step 3: Lautering

The mash is then pumped into the lauter tun, where a sweet liquid (known as wort) is separated from the grain husks.

Step 4: The boil

The wort is then collected in a vessel called a kettle, where it is brought to a controlled boil before the hops are added.

Step 5: Wort separation and cooling

After boiling, the wort is transferred into a whirlpool for the wort separation stage. During this stage, any malt or hop particles are removed to leave a liquid that is ready to be cooled and fermented.

Step 6: Fermentation

To start the fermentation, yeast is added during the filling of the vessel. Yeast converts the sugary wort into beer by

producing alcohol, a wide range of flavours, and carbon dioxide (used later in the process to give the beer its sparkle).

Step 7: Maturation

After fermentation, the young green beer needs to be matured in order to allow both a full development of flavours and a smooth finish.

Step 8: Filtration, carbonation, and cellaring

After reaching its full potential, the beer is filtered, carbonated, and transferred to the bright beer tank, where it goes through a cellaring process that takes 3–4 weeks to complete. Once completed, the beer is ready to be packaged.

TYPES OF BEER

ALES

Ale is fermented using *Saccharomyces cerevisiae*, a very common yeast type used for an enormous different applications, including wine and bread making. It's a hardy variety that deals better with varying environments, whether it's a wider range of temperatures, a higher alcohol content or many other changes. It's the original yeast of civilisations and has been found across the world, including Antarctica. It's referred to as a top-fermenting yeast because it will first rise to the top and then sink to the bottom of the brewing vessel when fermentation is ending. This quality also makes it very easy to harvest the yeast without disturbing the process.

LARGERS

Lager, on the other hand, is fermented using *Saccharomyces uvarum*. This yeast doesn't ferment to the bottom as much as it doesn't rise to the top as an ale yeast will before settling to the bottom as fermentation winds down. Because the

yeast didn't show up at the top of the fermentation vessel, it was probably assumed to be bottom fermenting instead, as early fermentation vessels were constructed of materials that made it difficult to see the bottom of the vessel.

This fragility means the yeast can't speculate, or form a cyst of a few cells with a protective wall at cold temperatures, which means this yeast can remain active at temperatures below 39°F. It also attenuates sugars more slowly, causing the brewing process to move more slowly. It has a lower tolerance to alcohol and can ferment mebilose, a sugar that is not fermented by top-fermenting yeasts. These last three features allow more sugar to remain in the mix, creating a smoother, sweeter beer.

ALE	LAGER
Ale is a variety of beer brewed using a warm fermentation method with top-fermenting yeast at warm temperatures between 60°–70°F	Lager is a variety of beer that is brewed and processed at low temperatures with bottom-fermenting yeast at cold temperatures between 35°–50°F
Usually come with a fruity flavor profile, which is rich, bitter and strong	Give a crisp and clean taste, which is milder and lighter
Contain a higher alcohol content	Contain a lower alcohol content
Darker and a relatively cloudier appearance	Lighter in shade and clearer appearance

BEER BRANDS

KINGFISHER	BUDWEISER	BIRA 91	TUBORG	CARLSBERG
MILLER	CORONA,	HOEGAARDEN	GODFATHER	BROCODE
FOSTERS	HEINEKEN	WHITEOWL	KNOCKOUT	HYWARDS 5000

(J) WINE

Wine is an alcoholic drink typically made from fermented grape juice. Yeast consumes the sugar in the grapes and converts it to ethanol, carbon dioxide, and heat. The alcohol content of red wine usually falls **between 12% and 15%**, with an average of **13.5% ABV**. Port wine is a heavy, dark red wine with an alcohol content of **16% to 20%**, with an average of **18% ABV**. Port wine has more alcohol than other reds because it is a fortified wine. Fortification is when a wine has distilled grape spirits added during fermentation.

IMPORTANCE OF GRAPES IN MAKING WINES

Fruit wine can be made from all kinds of fruits, from plums to cherries to peaches and more, but grapes are particularly well-suited for wine production. Most fruits don't produce the amount of sugar required for yeast to convert to alcohol. Making fruit wine starts by adding a large amount of sugar, grapes have enough acidity to balance the sweetness, and the thick skins and seeds have tannins that give wine its structure.

PARTS OF GRAPES

STALK: Stalks hold grapes in a bunch. They weigh around 3-7% of the total weight of the harvest, depending on the

type of vine. Stalks contain tannins, which are soluble in alcohol. Tannin contributes the following qualities to wine: Astringency maintains quality and helps in coagulation with a fining agent containing protein that is used during the clarification process.

SKIN: It is the natural cover to protect the contents inside the grape. The skin contains the pigments “anthocyanins” and “flavonoids” that give colour to the wine. The skin is covered with a waxy substance called bloom, which contains bacteria, moulds, and millions of wild and wine yeasts, including *Saccharomyces ellipsoidum* in various forms, which converts the grape sugar to alcohol.

PULP: It is a soft substance behind the skin of the grapes which contains liquid, sugar (glucose and fructose), and acids, such as tartaric, malic and citric acids. It amounts to 80–85% of the weight of the bunch. During the fermentation process, these acids interact with the alcohol and produce ‘ester’, which provides bouquet to the wine. The water content of the pulp is about 80%, and the sugar is between 10–25%, and the rest is acids.

PIPS: These are the small seeds or grapes. These contain both tannins and oils. They give an unpleasantly bitter flavour to the wine and are discarded during winemaking.

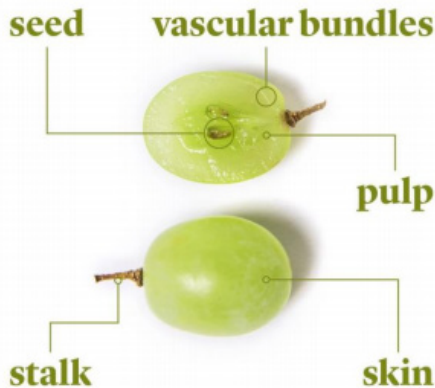

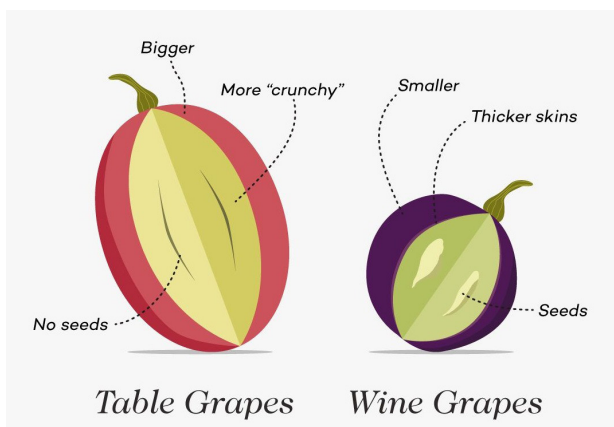

TABLE GRAPES AND WINE GRAPES

There are approximately 600 grapes in the average bottle of wine, but these aren't just any grapes. If you purchased grapes from the grocery store and tried to make wine, you likely wouldn't be impressed by the results. It is technically possible to ferment these grapes, which are known as table grapes, but they don't produce wine with the same structure and flavours as actual wine grapes. Likewise, eating a wine grape right off the vine is very different from eating a table grape. These grapes are edible, but they're meant to be enjoyed as wine rather than eaten directly. Knowing the difference between the types of grapes you buy at the store and the types of grapes we grow at our vineyard can help you better understand the winemaking process.

Table Grapes

Table grapes have thin skin so that you can easily bite into them, and they also have no seeds or very small seeds. Whereas the focus with wine grapes is producing a smaller number of high-quality grapes, a higher yield is a major

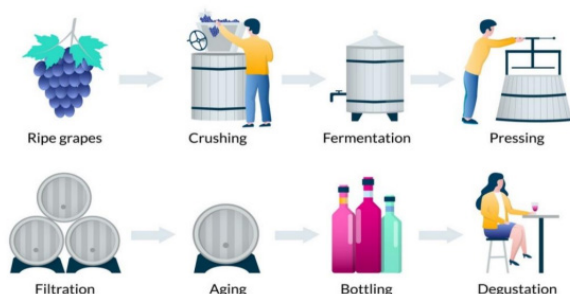

goal for table grapes. This is because each grape doesn't need to have an intense flavour to be enjoyable, and a lower yield would lead to higher prices.

Wine Grapes

Wine grapes have thicker skin, which imparts more flavour into the wine. These grapes are also smaller than table grapes, resulting in a more concentrated taste. In addition to being smaller, there are fewer wine grapes on a vine. This is because a smaller yield helps ensure that each grape is strong enough to produce high-quality wine. They have large seeds that take up a significant portion of the fruit. Like the skin, this is important for giving wine more flavour. Finally, wine grapes are sweeter. Brix is a measure of the sweetness of a liquid and wine grapes have a brix of 24-26, compared to 17-19 for table grapes. This is important because sugar becomes alcohol during fermentation.

WINE MAKING PROCESS

The art and science of winemaking have been around for thousands of years. Each winemaker guides the process in different ways from pressing wine with your feet to using complex machinery. Most wines are crafted by using the same six steps: harvest, crush, press, ferment, age and bottle.

1. Harvesting

Harvesting or picking is certainly the first step in the actual winemaking process. Without fruit, there would be no wine, and no fruit other than grapes can produce annually a reliable amount of sugar to yield sufficient alcohol to preserve the resulting beverage, nor have other fruits the requisite acids, esters and tannins to make natural, stable wine consistently. For this reason and a lot more, most winemakers acknowledge that wine is made in the vineyard, at least figuratively. The process of making fine wine requires that the grapes be harvested at a precise time, preferably when physiologically ripe.

2. Crushing and Pressing

Crushing the whole clusters of fresh ripe grapes is traditionally the next step in the winemaking process. Today, mechanical crushers perform the time-honoured tradition of stomping or treading the grapes into what is

commonly referred to as must. For thousands of years, it was men and women who performed the harvest dance in barrels and presses that began grape juice's magical transformation from concentrated sunlight and water held together in clusters of fruit to the most healthy and mystical of all beverages – wine.

3. Fermentation

Fermentation is indeed the magic at play in the making of wine. If left to its own devices, must or juice will begin fermenting naturally within 6-12 hours with the aid of wild yeasts in the air. In very clean, well-established wineries and vineyards, this natural fermentation is a welcome phenomenon. However, for a variety of reasons, many winemakers prefer to intervene at this stage

by inoculating the natural must. This means they will kill the wild and sometimes unpredictable natural yeasts and then introduce a strain of yeast of personal choosing to more readily predict the result.

4. Clarification

Once fermentation is completed, the clarification process begins. Winemakers have the option of racking or siphoning their wines from one tank or barrel to the next in the hope of leaving the precipitates and solids called pomace in the bottom of the fermenting tank. Filtering and fining may also be done at this stage. Filtration can be done with everything from a coarse filter that catches only large solids to a sterile filter pad that strips wine of all life. Fining occurs when substances are added to a wine to clarify it. Often, winemakers will add egg whites, clay, or other compounds to wine that will help precipitate dead yeast cells and other solids out of a wine.

5. Aging and Bottling

The final stage of the winemaking process involves the aging and bottling of a wine. After clarification, the winemaker has the choice of bottling a wine immediately, which is the case for Beaujolais Nouveau, or he or she can give a wine additional aging, in the case of Grand Cru Bordeaux and great Napa Valley Cabernet Sauvignon. Further aging can be done in the bottle, stainless steel or ceramic tanks, large wooden ovals, or small barrels, commonly called barriques.

TYPES OF WINE

Each type of wine offers a unique flavour profile, influenced by grape varieties, terroir, and production methods.

1. TABLE WINE OR STILL WINE

Table wine is a wine term with two different meanings: a style of wine and a quality level within wine classification.

Types of table Wines:

Red wine

The red-wine production process involves the extraction of colour and flavour components from the grape's skin. Red wine is made from dark-coloured grape varieties. The actual colour of the wine can range from violet, typical of young wines, through red for mature wines, to brown for older red wines. The juice from most purple grapes is greenish-white; the red colour comes from anthocyanin pigments (also called anthocyanins) present in the skin of the grape; exceptions are the relatively uncommon teinturier varieties, which have red flesh and produce red juice.

White wine

Fermentation of the non-coloured grape pulp produces white wine. The grapes from which white wine is produced are typically green or yellow. Some varieties are well-

known, such as the Chardonnay, Sauvignon, and Riesling. Other white wines are blended from multiple varieties;

Tokay, Sherry, and Sauternes are examples of these. Dark-skinned grapes maybe used to produce white wine if the wine-maker is careful not to let the skin stain the wort during the separation of the pulp-juice. Pinot noir, for example, is commonly used to produce champagne.

Rose wine

A rosé wine incorporates some of the colours from the grape skins, but not enough to qualify it as a red wine. It may be the oldest known type of wine, as it is the most straightforward to make with the skin contact method. The pink colour can range from a pale orange to a vivid near-purple, depending on the varietals used and wine-making techniques. There are three primary ways to produce rosé wine: skin contact (allowing dark grape skins to stain the wort), saignée (removing juice from the must early in fermentation and continuing fermentation of the juice separately), and blending (uncommon and discouraged in most wine growing regions). Rosé wines can be made still, semi- sparkling, or sparkling, with a wide range of sweetness levels from dry Provençal rosé to sweet White Zinfandels and blushes. Rosé wines are made from a wide variety of grapes all over the world.

2. FORTIFIED WINE

Fortified wine is a wine to which a distilled spirit, usually brandy, has been added. In the course of some centuries, winemakers have developed many different styles of fortified wine, including port, sherry, madeira, Marsala, Commandaria wine, and the aromatised wine vermouth.

TYPES OF FORTIFIED WINES

There are five basic styles of fortified wine. These vary by regional preferences or the methods used in producing them:

Madeira is a white fortified wine from the Portuguese island of the same name. It comes with various classifications, including by grape and age.

Marsala is an Italian specialty originating from the country's southern region. It is classified by both colour and age, with sweet and dry varieties represented.

Port wine is the best-known fortified wine. Though Portugal is known for creating ports, it's now producing throughout the world. For this wine, you can choose from tawny, ruby, vintage, and white ports.

Sherry is a well-known fortified wine produced in Southwest Spain. It comes in fino (dry and light-bodied) and oloroso (dry but richer) styles.

Vermouth is probably known as the "other" ingredient in a martini, but it's great to sip it on its own as an aperitif. It is generally available as either dry or sweet. Vermouth is produced worldwide and varies in taste and quality depending on the producer.

3. AROMATIZED WINE

An aromatized wine is a fortified wine or mistelle that has been flavoured with herbs, spices, fruit or other natural flavourings. Some historians believe early aromatised wines were invented for medicinal purposes, since ancient wines were flavoured with cocoa, gentian root, and wormwood. Though they're classically made with bitter herbs like quinine and chinotto, aromatized wines can be made with almost anything. Lillet, the French aperitif, is seasoned with sweet and bitter orange peels, quinine, and spices. Usually, these beverages begin as a simple white wine. Then,

either brandy and herbs are added to steep in the wine, or herbs are steeped in brandy or eau-de-vie (brandy from fruit other than grapes, with some residual flavour. After a few weeks or months, the herbs are removed, and, voilà, aromatised wine is born.

4. SPARKLING WINE

Sparkling wine is a wine with significant levels of carbon dioxide in it, making it fizzy. While the phrase commonly refers to champagne, EU countries legally reserve that term for products exclusively produced in the Champagne region of France. Sparkling wine is usually either white or rosé.

CHAMPAGNE VS SPARKLING WINE

The easy and short answer is that sparkling wine can only be called champagne if it comes from the Champagne region in northern France, just outside of Paris. There are several types of sparkling wine; the most common are Prosecco from Italy, Cava from Spain and sparkling wine from Australia.

SERVICE OF WINE

1. Setting the Wine Glasses

Set the correct glasses on the table before presenting the wine. For white wine, use the proper stemmed white wine glass, for red wine use the proper red wine glass.

2. Presenting the Wine Bottle

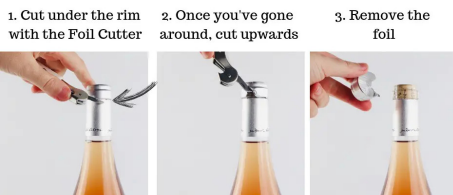

- i. When a guest asks for wine, the waiter or sommelier should obtain the bottle from the service bar. For white wines, the bottles are set into a nice bucket, cover it with a clean folded napkin and bring the service into the dining room, put the wine bucket to the right of the

person who ordered the wine.

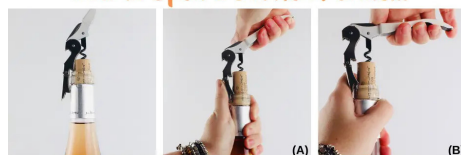

- ii. The waiter or sommelier then presents it to the guest with the label. And the host has an opportunity to verify the correctness of his order.
- iii. This bottle presentation is an important part of wine service and should not be overlooked. If the sommelier misunderstood the guest and brought in the wrong wine which the guest will later object. Furthermore, this bottle presentation ceremony shows courtesy to the guest, regardless of his knowledge about wines, and adds to the atmosphere of the dining room.

3. Opening the Wine Bottle

- i. The opening of the wine bottle begins with the removal of the foil around the cork and neck of the bottle.
- ii. The foil should be cut with a knife well, below the lip of the bottle and not ripped off with a fingernail. Older wines are often a bit mouldy below the foil at the top of the cork.
- iii. Wipe the bottle top and cork with a clean napkin. Set the corkscrew into the cork and turn it carefully straight into the cork, using only moderate pressure.

How to Open a Bottle of Wine...

4. Use the middle "feet" to push & pull

5. Use the end "feet" to push & pull (keep the "feet" in place by applying pressure with thumb (A) or index (B))

4. Pouring the Wine

- i. Before pouring any wine, wipe the open top of the bottle with a clean napkin to remove any cork grains or other impurities.
- ii. The sommelier should pour about an ounce into the glass of the host (or whoever ordered the wine) so that he/she can approve the wine.
- iii. Hold a towel in the left hand when serving the wine and use it to wipe the bottle. Do not wrap the bottle in a towel since the passengers usually wish to see the label of the wine they are drinking.

When the host has approved the wine, pour wine as follows:

- i. For a couple, serve the lady first.
- ii. For the group, the person sitting to the host's right. Proceed around the table counter- clockwise, filling the host's glass last.
- iii. Wine glasses should not be filled more than two thirds full. This gives the drinker an opportunity to savor the wine's aroma within the enclosure of the glass before sipping it.

(K) CHAMPAGNE

Champagne is a French sparkling wine. This alcoholic drink is produced from specific types of grapes grown in the Champagne region following rules that demand, among other things, specific vineyard practices, sourcing of grapes exclusively from designated places within the Champagne region, specific grape-pressing methods and secondary fermentation of the wine in the bottle to cause carbonation. On average, champagne alcohol percentage is usually **around 12%**. That means a few glasses of champagne or any sparkling wine can raise your blood alcohol levels.

The history of champagne dates back to the early 17th century in the Champagne region of France. Initially, it was a still wine, but in the 1660s, Dom Pérignon, a Benedictine monk, is often credited with pioneering the sparkling process that would define champagne. Through his innovative techniques in blending and fermentation, he created the sparkling wine that would become renowned worldwide. By the 19th century, champagne had gained significant popularity, becoming a symbol of luxury and celebration. The method of producing champagne, known as the “méthode champenoise,” was formalised, solidifying its reputation as a prestigious and distinctive beverage enjoyed across the globe.

CHAMPAGNE AND SPARKLING WINE

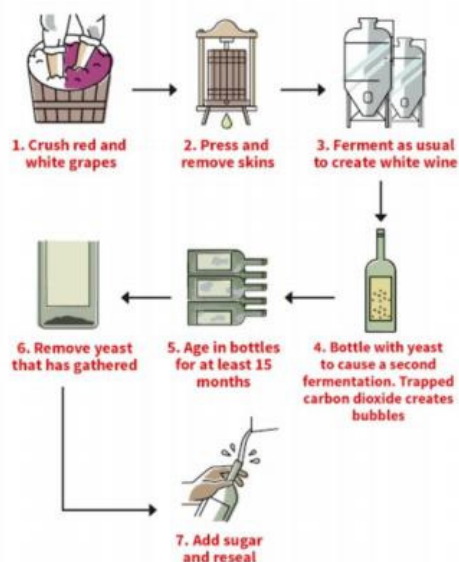

Sparkling wines are produced worldwide, but many legal structures reserve the word Champagne exclusively for sparkling wines from the Champagne region, made in accordance with “Comité Interprofessionnel du vin de Champagne” regulations.

“All champagnes are sparkling wines but not all sparkling wines are champagne”

PRODUCTION PROCESS OF CHAMPAGNE

1. The harvest

The grapes are picked by hand between August and October, the harvest time depends on how ripe the grapes are. The wine producers, such as Champagne Roger Constant-Lemaire in Villers-sous-Châtillon, are not allowed to pick the grapes with a machine. The grapes have to be picked by hand so that only the best and ripened grapes are contributed to the Champagne. After picking the grapes, they are pressed carefully to keep the juice clear white.

2. The First fermentation

The juice is put into a tank, and the first fermentation takes place. The result is an acidic still wine that has been fermented completely dry. (The wine producer sees to it that all the natural sugar present in the grapes is fermented out of the wine.) Some wine producers, like Champagne Alfred Gratienin Epernay, choose fermentation in a barrel, a technique that is more difficult to master with sparkling wine.

3. The Assemblage

This is the art of blending. Still white wines combined with some reserve wines to create the base wine for Champagne; Pinot Noir, Pinot Blanc and Chardonnay are combined together. The assemblage starts in the early spring, about 5 months after the harvest.

4. The Second fermentation

A mixture of yeast, yeast nutrients and sugar that is added to the wine in the second yeasting, the wine is put in a thick

glass bottle and sealed with a bottle cap. The wine bottles are placed in a cool cellar to ferment slowly and to produce alcohol and carbon dioxide. This is the most important part; the carbon dioxide cannot escape from the bottle and remains in the bottle; you will get the sparkling wine because of the carbon dioxide.

5. The Aging

As the fermentation proceeds, yeast cells die, and after several months, the fermentation process is complete. However, the Champagne continues to age in the cool cellar for several more years, resulting in a toasty, yeasty character. During this aging period, the yeast cells split open and spill into the solution imparting complex, yeasty flavours to the Champagne. The best and most expensive Champagne is aged for five years or more. This process completes the second fermentation.

6. The Riddling

After the aging process is completed, the dead yeast cells are removed through a process known as riddling. The Champagne bottle is placed upside down in a holder at a 75-degree angle. Each day, the riddler gives the bottle a 1/8th of a turn whilst keeping it upside down. This procedure forces the dead yeast cells to float into the bottleneck, where they are subsequently removed.

The bottles are placed in racks with the bottlenecks facing downwards. Madame Veuve Cliquot is the inventor of the bottle rack in which the bottles are put downwards.

7. The Disgorging

The disgorgement is the final step in the production of Champagne. The Champagne bottle is kept upside down while the neck is frozen in a nice-salt bath. This procedure results in the formation of a plug of frozen wine containing the dead yeast cells. Finally, the bottle cap is removed and

the pressure of the carbon dioxide gas in the bottle forces the plug of frozen wine out (disgorging) leaving behind clear Champagne. By doing so, a little bit of wine gets spilt out of the bottle.

8. The Dosage

A mixture of white wine, brandy and sugar is added to adjust the sweetness level of the wine and to top up the bottle. This procedure decides whether the Champagne will be Brut Nature, Extra Brut, Brut, Extra Dry, Dry, Semi-Dry or Doux.

9. The Corking

The bottle is corked, and the cork is wired down to secure the high internal pressure of the carbon dioxide in the Champagne.

(I) MEAD

Mead is a fermented beverage traditionally made from honey, water and a yeast or bacterial culture. Sometimes called “The drink of the Gods,” mead has been cultivated and consumed across the world for thousands of years.

It’s one of the oldest alcoholic beverages ever made, as it was consumed as far back as 4,000 years. Interestingly,

mead was common across ancient cultures around the world including those in Asia, Europe and Africa.

Mead is similar to beer, wine or cider, mead occupies a beverage category on its own since its primary fermentable sugar is honey. All you need to make basic mead is honey, water and a yeast or bacterial culture. However, ingredients such as fruits, herbs, spices, grains, roots and flowers are often included as well.

Mead's alcohol content varies but is typically around 5-20%. Its flavour profile ranges from very sweet to very dry, and it's available in both sparkling and still versions.

MEAD MAKING PROCESS

1. Mix honey and water in a container of choice, whether that be a bucket or a demi- john.
2. Add mead yeast and some sort of additional nutrition to the honey water mixture. The added nutrition might be fruit, such as raisins.
3. Fit the airlock to your vessel and wait. The yeast will start to work, turning the sugar into CO₂ and alcohol. The airlock ensures no contaminants get in but the CO₂ gets out, making a satisfying 'bloop'. This first fermentation could take anything from 2 weeks to a month depending on the recipe and the temperature.

4. When the bubbling stops, that tells you the first fermentation is finished. Transfer the mead to a second bucket or demijohn, leaving the sediment behind. Store in a dark place for about 2 months.
5. Bottle and label.

STYLES OF MEAD

Show Mead: Show mead is the plainest form of mead, and consists only of honey, water, and yeast. No other ingredients, including fruit or spices, can be added to show mead.

Melomel: Melomel simply refers to mead that has fruit or fruit juices added. You will often see them referred to with the name of the primary fruit in the name, such as “Blueberry Melomel”. While fruit is present in these meads, it is there to impart flavour and colour, and not as the primary fermentable sugar. Even in a melomel, sometimes called a fruit mead, the primary source of fermentable sugar is from the honey.

Metheglin: Metheglin is mead that is fermented with herbs or spices included in the honey and water. Common spices and herbs found in metheglin include cinnamon, cloves, lemon, mulling spices, ginger, pepper, rose petals, and even hops.

Braggot: Braggots are meads that also include sugars from malted grain. Think of a braggot as a mix of mead and beer. The exact amounts are argued a bit, and there is no exact rule for the amount of grain vs honey used.

Cyser: Cyser is a mead made by mixing honey with apple juice rather than water, which makes the fermented product a mix between hard apple cider and mead. Because of the extra sugars from the apple juice, cyser is usually sweeter and more tart than normal mead.

Pymment: Pymment is mead made with grapes or grape juice, making it a combination of mead and wine. Generally, wine grapes like Chardonnay or Shiraz are used to make pymment mead.

Bochet: Bochet mead is made by caramelising the honey used to make the mead before fermentation. Because the honey is caramelized, it imparts flavours of toffee and toasted marshmallow to the final product.

Sparkling mead: Sparking mead, is a style of mead that has been carbonated. Generally mead is carbonated through bottle conditioning, in which a small amount of sugar or honey is added to the mead before it is bottled so that the yeast in the bottle consumes the sugar to produce carbon dioxide.

(M) CIDER

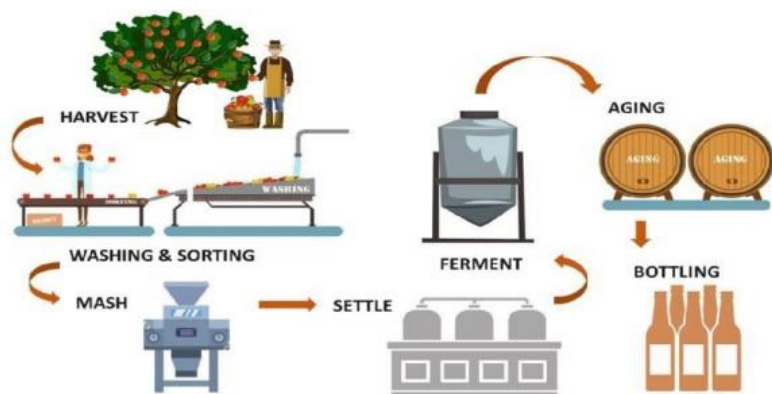

Cider is the sweet juice of apples that can be consumed as a beverage or used as a raw material in vinegar making. It is typically a clear, golden drink, which can range in colours from a pale yellow to a dark amber rose. It has a fruity flavour and a varying degree of taste from very sweet to tart. Sweet cider is the non-alcoholic version of cider, and it can be made into apple juice by pasteurising it and adding preservatives to stop the natural fermentation process. Hard

cider is the product that results when the juice is allowed to undergo fermentation. This cider contains alcohol. Additionally, it is often effervescent due to the activity of the natural yeasts present.

Cider alcohol content varies, generally, **between 3% and 8.5%**, but some continental cider goes to **12% alcohol**.

CIDER MAKING PROCESS

The cider-making process typically involves three stages, including crushing the fruit, pressing out the juice, and allowing it to ferment. To begin however, the fruit must be harvested, sorted, and washed.

Harvesting

In the United States, apples are typically harvested in the fall. At this time, field workers pick the apples by hand and transfer them to large storage bins, which can hold about half a ton of fruit. When these bins are filled, they are transported by tractor to the processing plant. At the plant, they are stored outside for about a week, which allows them to soften. This makes the apples easier to process and increases the amount of sugar in the juice.

Washing

After the apples have mellowed, they must be washed to remove leaves, twigs, insects, spray residues, and harmful bacteria. Towards the end, they are automatically poured out from the bins onto a scrubber. This machine rinses and scrubs each apple, removing most chemical residues from the skin. From there, they are moved along a conveyor to a hopper filled with water. A worker is on hand to see that an even stream of apples flows into the bath and makes sure that the apples are thoroughly washed.

From the hopper, the apples are put on a conveyor and moved to another worker. Jets of water aid in moving the apples. During manufacture, only whole apples are used because they have not been exposed to the flavour-damaging effects of oxidation. This means that each apple is inspected, and any rotten or mouldy fruits are removed. Since cider taste can be negatively affected by many different factors, cleanliness is essential during manufacturing.

Grinding

Next, the apples are put in a large mill and ground to a fine pulp with the consistency of apple sauce. This is done to ensure that the maximum amount of juice can be extracted from the apples. The finer the pulp, the greater the yield of juice. Fine grinding has the added benefit of reducing damage caused by oxidation.

Pressing

To remove the juice from the pulp, or pomace, it is pressed. Depending on the desired cider flavour, the pomace from various types of apple pulp is used. Typically, anywhere from three to six different types are blended in a large tank. This blend is then taken by the press operator and stacked for pressing. Wooden racks and forms are used for stacking the pomace.

Cooling and Filling

The cider is expelled from the pomace and pumped through plastic tubes to a cooling tank. As the cider is transferred to the cooling tanks, it is passed through a screen mesh to remove any pulp pieces from the liquid. It is then chilled and stored at 33° F (0.6° C). This helps to inhibit the contamination by undesirable microorganisms. If this cider is of the unfermented variety, meant to be unfermented, it is sent to a mixing tank and pasteurised. Preservatives such as potassium sorbate are added, and the juice is sent off to the filling lines.

Fermentation

Before fermentation is allowed to proceed, the various fermentation-assisting chemicals are added. Depending on the manufacturer, the cider may be allowed to ferment in a large, sealed bulk tank or the individual bottles. If it is fermented in the bottles, the product will be sold with a bottom layer of sediment. The sediment is the remains of the fermentation yeast. In bulk fermentation, the cider is siphoned off after the yeast has died. This allows for a sediment-free product. Complete fermentation may take one month till packaging.

Filling and packaging

When the cider is ready for filling, it is filtered again and pumped into the appropriate packaging. In this filling process, the empty, sterile bottles move along a conveyor and are passed under a filling machine. The machine pumps cider into the bottles to the desired volume. The caps are then put on the bottles and labelled. The jugs are put in boxes, then pallets, and stored at just above freezing temperature until the next day, when they are delivered to stores.

(N) SAKE

Sake is a Japanese alcoholic beverage made from fermented rice. Sake is light in colour, is noncarbonated, has a sweet flavour and contains about **14 to 16 percent alcohol**.

Sake is often mistakenly called a wine because of its appearance and alcoholic content; however, it is made in a process known as multiple parallel fermentation, in which a grain (rice) is converted from starch to sugar, followed by converting it to alcohol. Special strains of rice are precisely milled to remove the outer layers, a process that reduces the grain to 50 to 70 percent of its original size.

In Japan, where it is the national beverage, sake is served with a special ceremony. Before being served, it is warmed in a small earthenware or a porcelain bottle called a tokkuri; it is usually sipped from a small porcelain cup called a sakazuki. Premium sake, is of a delicate flavour, is served cold or on ice. Sake is best when consumed less than a year after bottling.

SAKE PRODUCTION PROCESS

Polishing rice for brewing

Sake Rice is grown especially for brewing. The grains are larger and have low protein content. The rice is carefully polished in a specially designed milling machine.

Washing

After polishing, the rice is washed to remove powder particles.

Soaking

The rice is soaked in water to increase moisture content.

Steaming

The rice is steamed for 40–60 minutes. After steaming, the rice is cooled to be used in either main fermentation process or the koji making process.

Koji making

Koji is an important element and largely affects sake quality. The koji is cultivated while carefully monitoring heat and humidity.

Starter mash

Steamed rice, water, yeast, and koji are combined in a small tank to create the starter mash. This technique was developed back in the Edo period.

Pressing

After 20–30 days of fermentation, the mash is passed through a press separating the sake from the lees.

Filtering

The sake is filtered to remove unwanted flavour and very fine impurities.

Pasteurization

Sake is generally pasteurized under low temperature 60–65 degrees to kill off bacteria after it is filtered and again after the maturation period.

Maturation

The sake is stored for about 6 months to mature in a tank.

Adding water

After Maturation, sake is diluted with water to adjust the alcohol content.

THE ART OF COCKTAIL MAKING

COCKTAILS

Cocktails are mixed drinks that have become popular since the first quarter of the twentieth century, and all bars offer a list of selected cocktails and mock-tails. One of many popular notions on the birth of the word cocktail is that during the American War of Independence, in 1779, an innkeeper, Betsy Flanagan of Virginia prepared a meal of chicken she stole from a neighbour who was pro-British. She then served the French soldiers with the mixed drinks decorated with the feathers from the birds. The word "Cocktail" was first described in an American magazine as a mixture of spirits, sugar, water, and bitters in 1806.

ANATOMY OF A COCKTAIL

A cocktail is made up of three principal ingredients: the base alcohol (or basis), the body (the modifier) and the perfume (the flavouring agent).

1. The Base

This is the main liquor ingredient that the cocktail is built upon. It is the largest component of the drink, and thus not only determines the type of drink but also dictates the other elements that are appropriate in the drink. For example, in a Sidecar, the base is brandy, and so it is considered a brandy cocktail, whereas in a Daiquiri, the rum is the base.

2. The Body/Modifier

The technical term is “modifier”, meaning an ingredient that modifies but does not completely dominate the base spirit. Without it, the drink is no longer a cocktail. The body is the component that holds the drink together, adding a consistency, weight, or texture, whether it be a light Juice, a Sparkling beverage or heavy cream.

3. 3. The flavouring agent/Perfume

The flavouring agent could be a fruit, nut, coffee, or herbal liquor or even a syrup which sometimes brings a new dynamic to the drink with aromatic notes, such as hazelnut, orange, strawberry, vanilla, or cherry. The flavour agent can bring sweetness, bitterness or colour to the drink and, even in minute amounts, completes the fine balance of the cocktail.

CONDITIONS FOR A SUCESSFUL COCKTAIL

A successful cocktail masterfully blends taste, appearance, and name. Its flavour should strike a harmonious balance between sweetness, acidity, and bitterness, delivering a memorable taste experience. The visual appeal, with thoughtful garnishes and elegant glassware, enhances its overall enjoyment. Additionally, a creative and evocative name adds mystery and charm. When these elements align perfectly, the cocktail becomes a captivating and delightful experience.

1. THE TASTE

In matters of taste, naturally, the choice of ingredients and the measures used must be correct. All the aromas must complement each other.

TASTE PROFILES OF A COCKTAIL

Understanding how your taste buds work will help you make great cocktails and improve your basic bartending knowledge. The main tastes of cocktails that can be recognised are,

Boozy: The characteristic flavour and aroma of the presence of alcohol in a large percentage. It may be sharp, warming, nose-tingling, or burning.

Sweet: Perception of the presence of sugars. Honey, fruits, and maple syrup.

Sour: Perception of the presence of acids. Citrus, vinegar, yoghurt, kombucha.

Bitter: Perception of the presence of bases. Certain botanicals like gentian root or cinchona bark, amaro liqueurs, tonic water, coffee, dark chocolate, beer, cranberries, cruciferous vegetables, green tea, and bitters.

Astringent: A drying sensation often associated with unripe fruit and the presence of tannins. Think black tea, red wine, pomegranate, and juniper.

Perceived temperature: This is the spiciness or heat our nerves perceive when eating things like chiles and black pepper, or the cooling sensation we get from mint.

2. THE APPEARANCE

Cocktails should always be attractive, excessive decorations should be avoided. One may also bear in mind that different results can be obtained by using the same ingredients. E.g. Daiquiri served in a Martini glass or Capirinha served as frappe in a rock glass, are both made from rum, lime juice and sugar but are different in appearance. Colour plays a significant role in the success of a cocktail.

3. THE NAME

The name of a cocktail is also integral because it stirs the imagination. Continuously or not, the customer will detect the hidden meaning behind it. The name can indicate the degree of alcohol in a cocktail or

whether it is non-alcoholic, whether it was invented for a particular occasion or in honour of an important person.

CLASSIFICATION OF COCKTAILS

According to an expert, "Over the centuries, many different styles of mixed drinks have emerged; some have faded, some have evolved, and some have endured for generations." The same expert underscores that there have been many classifications of cocktails, including classic and contemporary bartender guides. The problem is that it is always difficult to fit a specific cocktail into one of the defined categories or, on the contrary, one cocktail may fit into several of the proposed groups. Here are some basic classifications of cocktails according to their preparation style.

1. **Long cocktail vs short cocktail:** Long drink is an alcoholic mixed drink served in the amount of 200- 250 ml in a Tumbler or Highball cocktail glasses. In contrast to a short drink cocktail, a long drink is a refreshing drink with a relatively low alcohol content (8-15%) made with the addition of a large amount of fruit juices, vegetables or other beverages (cola, tonic, soda)

Short drink is a type of alcoholic cocktail that is prepared and served. A short drink has a volume of up to 100 ml. Drinks of this type are stronger than long drinks because the ingredients consist of strong alcohol, and we prepare them without diluting the ingredients. We add a small amount of non- alcoholic substances to the glass. A short drink is served in a cocktail glass.

2. **Shot or Shooter Cocktail:** A shooter, or shot, is a small serving of spirits or a mixed drink (usually about one ounce), typically consumed quickly, often in a single gulp. It is common to serve in a shot glass.
3. **Multi liquor Cocktails:** Multi liquor Cocktails are usually composed with the combination of more than one base spirit (minimum 2 different spirits) with a modifier.
4. **Sprit Forward or spirit only Cocktails:** Spirit-Forward Cocktails are usually composed of a base spirit with a modifier of vermouth, or another fortified wine such as sherry or port, often accompanied by other ingredients such as bitters or small doses of liqueurs or syrups.
5. **Hot cocktails:** As its name says, served hot. Include coffee-based drinks (Irish Coffee), Hot Buttered Rum, Hot Toddy, Tom & Jerry.
6. **Molecular cocktails:** Molecular mixology is the process of creating cocktails using the equipment and techniques of molecular gastronomy. These methods enable the creation of greater intensities and varieties of flavour, and flavour combinations and different ways of presenting drinks, for example, using gels, powders, foams, atomised sprays etc., as well as affecting the appearance of the cocktail.

COCKTAIL MAKING INGREDIENTS

You can't just mix a random liquor with a random refresher and expect it to taste good. The flavours of both the liquids should blend perfectly, enhancing the power of both the alcohol and the refresher itself.

1. SPIRITS

The most important ingredient in any cocktail is a quality spirit. Spirits are the base of every cocktails. The spirits are used to make cocktails are Vodka, Rum, Gin, Tequila,

Brandy, Whisky, Wine and Beer.

Top Tip: Vodka is the most versatile liquor out there. It has the ability to blend well with any ingredient.

2. ICE

Ice is certainly not going to stay in its solid state all day as we studied in our schools after it gets added to the cocktail. As soon as it gets diluted in the cocktail it adds flavour to the cocktail.

Alcoholic drinks don't usually require water, but they do ask for being reduced with shaken or stirred ice. This dilution method serves to unite all the zest and arrangements for a hearty drink.

The purpose of ice

It's easy to think that the sole purpose of ice is to chill a drink, but it has additional benefits. When a cocktail is shaken or stirred with ice, the ice breaks down and adds water to the drink. This dilution marries the drink's flavours while mellowing the alcohol and heavy fruit flavours to create a smoother and more enjoyable beverage.

TYPES OF ICE AND ITS USE

There are four basic types, or forms, of ice: cube, cracked, shaved, and block. Each has its uses for various styles of drinks.

"As a general rule, shaved ice should be used when spirits form the principal ingredient of the drink, and no water is employed. When eggs, milk, wine, vermouth, seltzer or other mineral waters are used...it is better to use small lumps of ice..."

Ice Cubes

These are good for almost all mixing requirements: shaking, stirring, drinks on the rocks, or those with juices and sodas. Cubes with a larger, thicker surface area melt more slowly

and cause less dilution. Standard 1 1/2-inch rectangular cubes are the workhorses of the bar and an economical choice for mixing and serving drinks. Consider purchasing larger ice cube moulds if you serve many drinks on the rocks such as straight Whiskey or lowballs like the white Russian.

In most drinks that are shaken or stirred, then served over ice, you'll use two rounds of ice cubes. While mixing, ice cubes break down significantly and will melt faster if poured into the glass. Straining the mixed drink over fresh ice cubes is one way to avoid an overly diluted beverage.

Cracked ice/Crushed ice

Smaller than cubes, cracked ice—,such as bagged ice from the store—,melts faster and adds more water to drinks. It's preferred when making frozen drinks because ice cubes can clog the blender blades and lead to inconsistent results. Two-thirds to one cup of cracked ice is perfect for a single frozen daiquiri or margarita.

Shaved ice

Crushed or shaved ice is the type produced most often by soda fountain machines. It's very fine ice that can be used in a shaker or glass to create a thick slurry of a cocktail. Some cocktails, like the mint julep, prefer crushed ice.

Beyond whacking ice cubes, you can make crushed ice in the blender. The goal is to chop up the ice into pebbles. You will need to drain off the water it produces, and you want to have a bowl ready so you can pop the crushed ice in the freezer.

You can also use shaved ice to make an "adult snow cone." Pack it in a glass (or paper cone for an authentic experience) and pour liqueurs over the top.

Block ice

In the early days of the bar, when ice was a new commodity, all of the ice bartenders started with a large block. It was up to the individual and their ice tools to create smaller, usable chunks and shavings for mixing drinks. Luckily, we don't have to use picks and shavers anymore.

Today, blocks are primarily used for chilling party punches and can take any form you want. Ice rings are popular and easy to make with a standard ring pan. There are many novelty moulds available, or you can also use almost any container available, as long as you can remove the solid ice.

Ice ball

The ice ball is another large chunk of ice that's quite popular. In Japan, skilled bartenders carve balls by hand, but moulds are available for home use. Ice balls are perfect for serving Whiskey on the rocks and lowball cocktails. Even on a hot day, they'll last for hours.

TIPS FOR MAKING THE BEST ICE

Basic science says that ice is water in a solid form. Therefore, it only stands to reason that cleaner water produces cleaner ice, which will add water to your cocktails in the end. Start right by freezing water that you would drink: distilled, purified, natural spring, or bottled. Anything but unfiltered tap water is preferred.

3. LEMON AND LIME FOR SOUR TASTE

To balance sweet tones in your cocktails, you need something sour. The most common sources in cocktails used worldwide by bartenders are lemon juice & lime juice. Lemons and limes are highly acidic citrus fruits. Limes are green, small, and generally more acidic than lemons. Lemons are yellow and larger than limes. Both fruits have good nutritional qualities.

Lemons and limes are both very acidic but have slightly different flavours and scents. Lemons have a sour, acidic taste, while a lime has a bitter, acidic taste. Both citrus fruits are frequently used in cooking and cocktails, as well as a variety of household products. Fresh lemon or lime juice brings a tangy zing to so many classic drinks! It's one of the most used ingredients in mixed drinks (outside of the liquor, of course).

4. SUGAR/SWEETNER

There are countless different types of sweeteners you can add to your cocktails. From the common, simple or rich sugar syrup is used to make sweetness. When making cocktails, you can easily prep your syrups before the party starts. The easiest to make and most used syrup in the world of cocktail bartending is the simple or rich sugar syrup. You can easily buy sugar syrup, but if you want to save some money, you should try the recipe below; it's simple and easy.

Simple sugar syrup

Ingredients: 1 kilogram refined sugar, 1 liter of boiling water.

Method: Add your ingredients in a pan. Heat the mixture up and stir until all the sugar is dissolved. Let cool down and bottle. Or add boiling water to the sugar and stir until all the sugar is dissolved.

Rich sugar syrup

Ingredients: 2 kilograms of refined sugar, 1 litre of boiling water. *Method:* Same method as simple sugar syrup.

5. FRESH FRUITS AND VEGETABLES

Where liqueurs, Syrups, and flavoured crushes bring flavour to your cocktails, they also add a lot of sweetness. To get a fresh flavour in your cocktails, grab a bunch of juicy fruits and vegetables. Depending on the season, try to get your

hands on some forest fruits, oranges, grapefruits, passion fruits, etc. Make sure the fruits you picked are ripe. Overripe or under-ripe fruits usually taste either bitter or sour. Fruits are not only cocktail ingredients, but you can also make nice & tasty garnishes with them.

6. FRUIT PUREES

Puree is a fruit that has been cooked, ground, pressed, blended or sieved until it reaches the consistency of a creamy paste or liquid. Purees can also be frozen to last longer, and our careful preparation ensures that we preserve the qualities, taste and natural goodness of the fruit.

Fruit purees can be a healthy alternative for some unhealthy, yet vital, ingredients in your cocktails. It may offer slightly more calories than normal fruit as it is more concentrated, but the amount of vitamins, minerals and beneficial nutrients is the same. The natural sugar in fruit, fructose, alongside the retained flavours, colours and smells of the fruit, create great cocktails. Fruit Purees also increase shelf life, so say goodbye to the frustration of buying fruit and it only lasting a couple of days.

7. JUICES

Juices are essential when making cocktails. Whether they are freshly squeezed juices or concentrated fruit juices. Fruit juice is 100% pure juice made from the flesh of fresh fruit or whole fruit, depending on the type used. It is not permitted to add sugars, sweeteners, preservatives, flavourings or colourings to fruit juice.

TYPES OF FRUIT JUICES

Fruit juices come in two main types: fresh and packaged. Fresh fruit juices, like those squeezed from oranges or pressed from apples, are celebrated for their vibrant flavours

and high nutritional value, offering a taste that reflects the fruit's natural essence. Packaged fruit juices, including tropical varieties like pineapple and mango or berry options like strawberry and blueberry, provide convenience and a longer shelf life. Although they undergo processing, many are fortified with extra vitamins and flavours to preserve a rich, fruity taste. Both types of juice enhance a diet with refreshing and healthful options.

Freshly squeezed fruit juice

Freshly squeezed juice is extracted from the fruit and used immediately. Freshly squeezed fruit juices make the cocktails rich with taste, flavour, and health benefits.

Packaged fruit juice

Juice is extracted from the fruit, and the water content is reduced—, by evaporating off the water naturally present—, in the country of origin. The concentrated juice is usually frozen and shipped to the country of use for packing. Fruit juice packers then reconstitute the juice by adding back the water.

Packed Juices have different shelf lives depending on the packing process used. Long-life juices usually keep for six to 12 months while the packaging is kept sealed, and because of the pasteurisation process applied and the packing method, do not require chilling. Short-life juices have a shelf life of up to 30 days and must be kept chilled.

8. SPICES/BITTERS

Depending on the level of difficulty of your cocktails, you can add spices or bitters. Again, if you're a beginner, stick to simplicity. If you want more depth to your cocktail, add some spices and/or bitters. Cinnamon, star anise, and vanilla are just a few to mention. Bitters get you that extra little bit of kick to your cocktail. Common bitters such as Angostura bitters, Orange bitters can be bought in the

shops. Just make sure you know what's in your bitters and which ones you can use when making cocktails.

9. HERBS

Herbs found their way into the cocktail scene along time ago. We have been using more and more fresh herbs in craft bars as it has evolved over the last decade. Fresh Herbs can open a door to huge number of flavour and aromas and even add medicinal benefits.

Muddling is the most commonly used method while making cocktails with herbs. Use the end of a wooden spoon—or a legit muddler—to smash the herbs at the bottom of a glass or cocktail shaker, the oils released from a sprig or two of crushed herbs add no more than a hint of flavour, it's all a drink needs to go from good to so much better.

MOST COMMONLY USED HERBS

MINT

No surprise here – this is probably the most used herb behind most bars. The mint julep and the mojito are probably the most common cocktails that feature a fresh herb as a principal flavour in the drink, but there are so many uses for mint behind the bar.

BASIL

Most people are pretty familiar with basil as a cooking ingredient, but it also makes a delicious ingredient for cocktails as well. The dark opal and purple basil offer a beautiful dark colour that could make a stunning garnish.

ROSMARRY

Rosemary is a perennial evergreen shrub with blue flowers. It's an aromatic and distinctive herb with a sweet, resinous flavour. You can use the rosemary as a garnish to the cocktail, It gives the cocktail a great scent with every sip.

Plus, it's the perfect little stirring tool to mix up your drink as you sip it.

THYME

Thyme is an herb from the mint family that you probably recognise from your spice set, but it's so much more than an afterthought ingredient. It has a distinct smell. The flowers, leaves, and oil are commonly used to flavour foods and are also used in cocktails.

LEMON GRASS

Lemongrass is a plant. The leaves and the oil are used to make medicine. In food and beverages, lemongrass is used as a flavouring. For example, lemongrass leaves are commonly used as a "lemon" flavouring in herbal teas.

10. DAIRY PRODUCTS

Milk and Cream is the most commonly used dairy products to make cocktails. Milk and cream will add a rich texture to the drink. There is a set of drinks that are dominated by dairy; the white Russian is a perfect example. Cream will produce a rich drink and is often used in small quantities. Milk will create the lightest drinks, though this will vary from whole to skim milk.

The key to any dairy cocktail is, of course, freshness. Keep an eye on the expiration dates, and when in doubt, give your milk or cream the sniff test. If something seems even a little off, don't mix with it; also, best to serve these creamy cocktails immediately after mixing them. The cold drinks should be extra cold, and the hot drinks should be nice and toasty, but not scalded.

11. EGG WHITE

Egg whites are an excellent source of protein, but are fairly devoid of flavour or aroma. This is ideal for a cocktail, as it allows you to use the protein to trap air in your drink and

change the texture without adding other flavours.

Egg white is best to be used in shaken drinks, so don't stir it into drinks at the end. Dry shaking is the perfect method while using egg white. Shaking with ice allows you to chill and dilute your cocktail, but 'dry shaking' without ice allows you to maximise the effect of emulsification by unravelling the proteins so they can trap the maximum amount of air in your drink.

12. DILUTABLE MIXERS

The term 'dilutable' includes Squashes, Syrups flavoured crushes, Cordials, Powders and other concentrates that require dilution to taste by consumers. Dilutable products are sold in concentrate form and are then mixed with water for consumption.

COCKTAIL MAKING METHODS

The art of cocktail making is a harmonious blend of precision, creativity, and technique. It begins with the careful selection of quality ingredients, where each component plays a crucial role in balancing the final flavour. The method typically involves mixing spirits, liqueurs, and mixers, using tools like shakers, strainers, and stirrers to achieve the perfect blend. Whether it's shaken to create a chilled, aerated drink or stirred to preserve a silky texture, each method enhances different aspects of the cocktail. Garnishing with a twist of citrus or a sprig of herbs adds the final touch, making the cocktail a true sensory experience. Cocktails are made in any one of the following methods according to the type of modifier and ingredients in use.

1. SHAKING METHOD

It is the mixing of ingredients thoroughly with ice by shaking them in a cocktail shaker and straining into the appropriate glass. The cocktail-shaking method is used

when ingredients such as cream, egg, fruit juices, sugar syrup, etc. are used in the recipe.

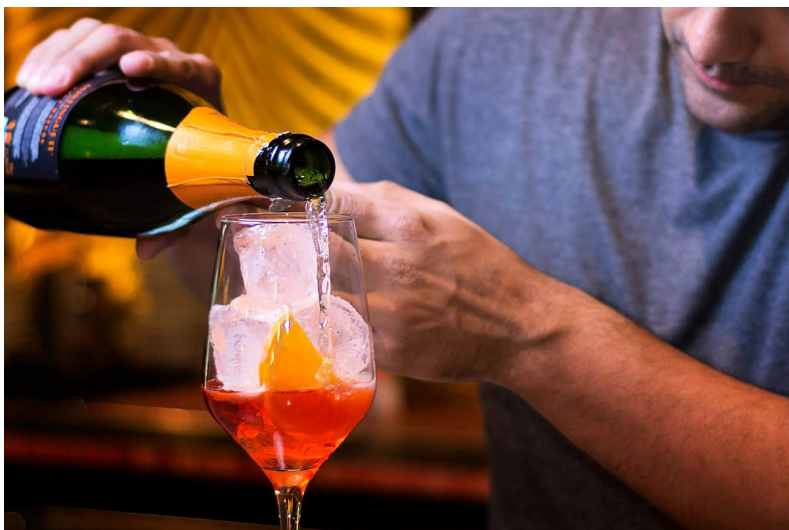

The dry shake

The 'dry shake' is the more traditional technique mixologists use to get egg white cocktails (or vegan alternatives) to froth. It's very simple – you just shake the egg white with all the other cocktail ingredients without ice to allow the mixture to combine without dilution (hence the phrase 'dry shake'). Then, after the ingredients have been agitated and become bubbly from the dry shake (usually about 2 minutes), ice is added to chill the liquid, gain the desired dilution, and further agitate the ingredients. The result? An irresistibly smooth foam that turns this gorgeous cocktail into basically a dessert.

The reverse dry shake

There are those mixologists who claim that the opposite technique works even better – the 'reverse dry shake'. As the name suggests, this is the inverse of a dry shake, where you begin by shaking the cocktail's ingredients with ice first. It is then strained and shaken again, this time without ice, before serving.

2. BUILDUP METHOD

It is made by pouring the ingredients one by one into the glass in which it is to be served and then stirring. In which the ingredients are added one by one straight into the glass in which it is served. If ice is required, it is placed first before adding the ingredients.

3. STIRRING METHOD

Stirring refers to the mixing of the ingredients with ice, by stirring quickly in a mixing glass with the stirrer and then straining into the appropriate glass.

Drinks made up of clear liquids, such as spirits, liqueurs, wines, and effervescent drinks, etc. are always stirred. It is done very quickly to minimize the dilution.

4. BLENDING METHOD

This method of mixing a cocktail is used for combining fruits, solid foods, ice, etc., in an electric blender. Any drink that can be shaken may be made by blending as well. It is a suitable method for making a large number of mixed drinks, but it consumes more time. If the fruit is pureed for the drink, the ice should be added after pureeing the fruit, according to its consistency. If too much ice is added in the beginning, the drink may be much diluted.

5. LAYERING METHOD

This cocktail-making method is used when the ingredients used are of a different colour, flavour, and sensitize. One ingredient is floated over the other by pouring gently over the back of a spoon into a small, straight-sided glass.

Syrups are heavier. Liqueurs are lighter compared to syrups and are available in many densities.

6. MUDDLING METHOD

Muddling is a technique used in drinks to gently mash herbs or fruit to release their juices. This helps the flavours to bind with the alcohol better than simply using them whole.

7. THROWING METHOD

Throwing, a long-forgotten cocktail preparation technique, is the act of straining a cocktail mix from one tin into another via a long pour. The mix is suspended in air for a brief moment before hitting the bottom of the opposing tin. This motion adds oxygen to the mix, which releases aromatics of certain ingredients that may not have been prevalent before, as well as shapes the texture and body of the cocktail.

8. SWIZZLE METHOD

Swizzle methods only work in drinks with crushed ice, and sizzlers are generally mixed in the glass in which they are to be served. Pour your ingredients into the glass and half-fill with crushed ice. Immerse the blades of your swizzle stick, hold the shaft between the palms of both hands and rotate the stick rapidly by sliding your hands back and forth against it. If you do not have a bona fide swizzle stick, use a bar spoon in the same manner.

COCKTAIL GARNISHES

Garnishes are very important for your mixed drinks. They make your drink look more presentable and they also add more flavour.

Note: Make sure you wash your fruits and vegetables thoroughly with water only.

MAIN COCKTAIL GARNISHES

There are six main cocktail garnishes. They are Maraschino cherries, stuffed olives, limes wedges, lemons wedges, orange slices and whipped cream. Every bar should have at least these garnishes.

1. CHERRIES

Maraschino Cherries are used for many mixed drinks and non-alcoholic drinks. You can buy them at the store. They come in a jar ready to use. Make sure you refrigerate after opening.

2. OLIVES

There are many different olives in the market today. Some olives come plain, and some come stuffed with pepper or other ingredients. They come in a jar ready to use. Make sure you refrigerate after opening.

3. LIMES

Wedges: A wedge is 1/8 of a lime, lemon or orange. In other words, there are 8 wedges in a lime, lemon or orange.

Lime Wedges: Cut off the ends of the lime. Then cut the lime in half from one end to the other. Finally, cut each half into four equal wedges.

Margarita Lime Wheels: Cut off the ends of the lime. Then cut slices from one end to the other. Use your judgment on how thick the slices should be. Finally, make one cut from the centre of the lime wheel to the edge so it can sit on the glass.

When to Use: Anytime you make a drink with lemon-lime soda, tonic water and sometimes soda water, in drinks that contain lime juice like Cosmopolitan, and in some drinks that contain sweet and sour mix like Margaritas.

4. LEMONS

Lemon Twist: Cut off the ends of the lemon. Then cut the rind from one end to the other making 1/3 inch strips (Make sure that you don't cut into the meat of the lemon). Finally, peel off the strips.

Note: When you are going to use a twist, rub the rim of the glass with the twist and then twist it and drop it over the drink to add a little bit of oil.

When to Use: Lemons are used on teas like Long Island Iced Tea and Long Beach Iced Tea. There are also used in Lemon Drop Martinis, lemonades and other drinks that contain lemon.

5. ORANGES

Orange Wedges: Use the same technique as the lime wedges.

Orange Spiral: Use a citrus stripper to make your orange spirals. Start at one end of the orange and cut around and down towards the other end, making along spiral peel.

When to use: Oranges are used any time you use Collins mix. They are also used in drinks that contain orange. The orange spirals are used in drinks like coolers.

6. WHIPPED CREAM

You can buy a can of whipped cream at the store. There are some manufacturers that make chocolate whipped cream and fat-free whipped cream.

MAIN USE: Whipped cream is used for many hot drinks, especially coffee drinks. It is also used with some frozen drinks like a Strawberry Daiquiri or a Mudslide. Another drink that you use whipped cream in is a Blow Job shot.

7. MINT LEAVES

Wash the mint leaves with water only.

MAIN USE: Mint leaves are used in drinks that have mint in them. Example: Mojitos and Mint Juleps.

8. PINEAPPLE

Pineapple Wedges: Cut the top and bottom of the pineapple. Then cut the pineapple in half from one end to the other. Cut one half in half from one end to the other. Remove the core section of the pineapple. Finally, cut wedges.

MAIN USE: Pineapple is used in many tropical mixed drinks.

9. APPLE

Apple Slices: Cut an apple in half. Then, cut each half into slices about 1/8 inch thick. Make a diagonal cut to the apple slice so it can be placed in a martini glass. Cut the apple slices right before serving the drinks.

10. STRAWBERRY

Wash strawberries with water only. If the strawberries are big, cut them in half. Just push the strawberry onto the rim of the glass.

MAIN USE: Mixed drinks that have berries or strawberry liqueur, like Strawberry Margaritas and Strawberry Daiquiris.

11. BANANA

Banana Slices: Cut through the peel from the middle of the banana. Make banana slices about 1/4 inch thick.

WHEN TO USE : It could be used in many drinks that contain banana liqueur.

12. BERRIES

It could be raspberries, blueberries, blackberries or other berries. Insert a cocktail stick into the berries and place it on top of the drink.

13. CELERY

Wash the celery with water only and cut the leaves and the base to make celery sticks. **MAIN USE:** Celery is used for Bloody Marries and Bloody Marias.

14. ONIONS (Cocktail Onion)

Cocktail onions are very small onions (about the size of a marble). You can buy them at the store. They come in a jar ready to use. Make sure you refrigerate after opening.

15. CHOCOLATE

A piece of chocolate or shaved chocolate may be used for garnish.

SHAVED CHOCOLATE: Buy a block of chocolate and use a cheese grater to shave it.

16. COFFE BEANS

The only time that you are going to need coffee beans is when you are serving Sambuca. Just drop three coffee beans into the Sambuca. The three coffee beans represent: Health, Wealth and Happiness.

17. CANDY

Candy is a great garnish. There is a wide variety of candy that can be used as garnish.

Examples: Candy canes, gummy worms or bears, mini candy bars, gum, etc.

18. SALT

Kosher salt is used to coat the rim of a glass. Moist the rim of a glass with a lime wedge. Then dip it into the salt.

HOW TO CREATE YOUR OWN COCKTAIL

Cocktail making is known to be a science, and not just because of its magical powers to uplift moods all over. A good cocktail, when mixed well with the right amount of concoction and ice, can be the ultimate crowd-pleaser. However, you might lose a bit of clout if your cocktail isn't made the right way.

Creating your cocktail is not as hard as you might think! You also do not have to go through a lot of trial and error if you follow these basic rules!

1. Know your stuff.

The first thing you have to do is try your ingredients! Whether it is a new glorious bottle of craft bourbon or an exotic French herbal liqueur, crack it open and see what it is. The thing we need to do now is to open the bottle and smell and taste it. Of course, it also helps not only to try your base spirit, but also the other ingredients, too. If you want to use a liqueur or fortified wine, go ahead and try those as well! Now that we are all set on the taste of our ingredients, we can move on to the proportions of our drink.

2. Start of with a blueprint

Even if a lot of people think that bartenders are just throwing random stuff together and see what the outcome is, it does not work like that! Do you think a chemist would just blend random chemicals and watch what happens? A bad one might, but probably only once ... It might seem like I am exaggerating here, but if you think of it, what bartenders and cocktail enthusiasts alike are doing is basically mixing different, hopefully very aromatic chemicals. This is why you at least need to write down a rough blueprint for what your ingredients should be and how much of them to use.

3. The Art of The Swap

Bartenders use this trick to come up with new cocktails all the time. However, keep in mind that the right ratio means everything. Start by swapping one ingredient in an existing recipe with a different ingredient, but in the exact same amount. One example would be when mixing a margarita, which is made of two parts tequila, one part lime juice, and one part Cointreau's. If you swap the tequila for two parts Cognac, and the lime for one part lemon juice, you have a whole different cocktail, the Sidecar in its perfect proportions!

4. Matching ingredients

This might sound hard at first, but you are actually not alone on this one. There are plenty ways of getting inspiration. Sure, there is Food pairing, a Flavours Bible or just a quick search on the internet, "goes well with...". Sometimes you do not even have to look that far! Just think of dishes or cocktails you already like. In our case, you probably had a chocolate cookie with your favourite Starbucks brew. So, why not take this as an inspiration?

FLAVOUR PAIRING GUIDE

BASE	PAIRING FLAVOURES
COFFEE	Banana, Chocolate, Coconut, Cinnamon, Hazelnut, Caramel
ORANGE	Cranberry, Pineapple, Peach, Passionfruit, Banana, Pomegranate, Coconut, Mint, Cinnamon, Almond, Vanilla, Basil, Ginger, Bitters
CRANBERRY	Orange, Almond, Pineapple, Grape, Tabasco, Cinnamon, Ginger, Apple
PINEAPPLE	Orange, Passion fruit, Kiwi, Mango, Peach, Pomegranate, Raspberry, Cranberry, Cinnamon, Coconut, Almond, Ginger, Mint, Rose, Bitters
APPLE	Ginger, Almond, Saffron, Cinnamon, Cranberry, Basil, Mint,
MANGO	Vanilla, Coconut, Tabasco, Green chilly, Chocolate
PASSION FRUIT	Ginger, Coconut, Pineapple, Cinnamon, Bitter, Tabasco sauce, Pomegranate, Orange, Mango
RASPBERRY	Chocolate, Basil, Coconut, Pineapple, Passionfruit, Ginger, almond, mint,
STRAWBERRY	Coconut, chocolate, Mint, banana, peach, Vanilla
KIWI	Pineapple, Banana, Coconut, Mango
BANANA	Caramel, Chocolate, Coffee, Mango, Orange, Ginger, Coconut, Cinnamon, Vanilla
COCONUT	Almond, Banana, Basil, Caramel, Cucumber, Guava, Mango, Mint, Passion fruit, Pomegranate
CUCUMBER	Mint, Basil, Elder flower, Jalapeño, Green chilly

5. Paying respect to balancing

Many of us have tried our hand at mixology, but often the final product is let down by some simple mistakes. This is the single most important skill when it comes to making delicious drinks. A chef won't make a sauce, then sling it

onto a plate and send it out to a paying guest without first tasting it. You must apply the same rationale to your drinks making. Every piece of fruit is different, ingredients get forgotten, ice melts at different rates, and sometimes you want to try a variation on a classic. If you don't taste your drinks, any one of these variables can ruin your drink and you won't know if what you're reserving tastes any good until. However, if you taste your drinks, adjust when needed and trust your nose and palate, then you should never serve another poor drink again.

6. The right glassware to use

You would not serve a small and concentrated Old-Fashioned in a Tiki bowl, would you? Nevertheless, you should think about the quantity of your drink and make sure that it fits the glass. Moreover, you sometimes have a few options on how to serve your drink. In the case of a sour, you could serve it neat in a Cocktail glass, or on the rocks in a Double Old-Fashioned or the traditional way in a Sour glass, which looks like a small wine or sherry glass. Think about it, but do not spend too much time worrying or try a few ways to find out which one you prefer.

7. Don't forget the garnish!

Now that we have come so far, you should not forget to think for a few seconds about how to garnish your drink. As a beginner, you might disregard the garnish as an unnecessary gimmick that distracts from the cocktail itself. Yet, let me tell you from my experience as a bartender, even the slightest extra effort to decorate your concoction goes a very long way! For example, dusting the mint on the Mojito with powdered sugar. You do not have to overdo it in the garnishing department, but just a little lemon twist will keep the rim of the glass from looking empty and sad.

8. Give your baby a name

This might sound obvious, but still: If you create a great cocktail, people will want to know what it is called. So you'd better think of it in advance and make sure it fits the drink and sounds pretty.

9. Invent a colourful background story!

Lots of cocktail competitions nowadays ask to create a story that fits the cocktail and gives it a proper background. First, you probably already know what I am thinking about cocktail competitions. Second, telling all the thoughts and efforts you went through in the last ten steps should be more than enough! I don't know if people behind competitions are just in search of something to set them apart from others, or if they want to save money and get the bartenders to do the marketing team's work instead.

THE ART OF COCKTAIL PRESENTATION

Well presented cocktails are more than just drinks; they are an essential aspect of the bar's aesthetic and ambience. A bartender's skill in presenting cocktails can significantly enhance the visual appeal and overall experience of a bar. Bartenders employ various techniques to present cocktails in creative and visually appealing ways. Techniques like layering drinks for a gradient effect, using flames for a dramatic presentation, or smoke infusion for a mysterious allure, are all part of the mixologist's repertoire. These techniques require skill and creativity, allowing bartenders to craft drinks that are not just delicious but also visually captivating.

In this chapter, we will discuss about some of the most popular cocktail presentation techniques around the world used by Bartenders.

1. SMOKE OVER ICE

EQUIPMENTS REQUIRED

- Smoke top/Net strainer
- Flash jet lighter
- Wooden chips/dried spices

INSTRUCTION

- Place the smoke top or double
- strainer on the top of the cocktail glass
- Fill the smoke top or double
- strainer with wooden chips or dried spices
- Burn the wooden chips or dried spices with flash jet lighter
- Present the cocktail with smoke to the customer

Pro tip: While serving the cocktail use a coaster to trap the smoke inside the glass until serving the to cover the cocktail glass mouth. It will help cocktail to the customer.

2. SMOKE FILLED DOME

EQUIPMENTS REQUIRED

- Smoking Gun/Favour blaster gun
- Flash jet lighter
- Dried wooden chips
- Wooden stand with dome

INSTRUCTION

- Light the smoking gun
- Trap the smoke inside the dome
- Present the cocktail to the customer with wooden stand and smoke filled dome

Pro tip: If you don't have a smoke gun, you can also fill the dome with smoke using dry ice. Just place a bowl with dry ice inside the dome and add hot water to the dry ice. The dry ice will evaporate and make smoke to fill the dome.

3. SMOKE BUBBLE

EQUIPMENTS REQUIRED

- Smoking Gun / Favour blaster gun
- Flash jet lighter
- Dried wooden chips
- Edible bubble solution

INSTRUCTION

- Dip the nozzle of the smoking gun into edible bubble solution
- Light the smoking gun
- Place the nozzle of the smoke gun over the cocktail glass
- Place the smoke filled bubble over the cocktail
- Present the cocktail to the customer with smoke bubble

4. FLAMING SHOTS

EQUIPMENTS REQUIRED

- Glassware to serve cocktail
- Bar spoon
- Lighter
- High proof flammable spirit

INSTRUCTION

- Serve the cocktail on the glass
- Layer the flammable spirit using a barspoon of the top of the cocktail
- Light the spirit that floating on the top of the cocktail
- Present the flaming shot to the customer

How to serve: We can drink the flaming shot by directly pour into the mouth or use a straw to sip the flaming drink.

5. FLAMING TOWER

EQUIPMENTS REQUIRED

- Cocktail to serve the customer
- Glassware's to Build Tower
- Lighter
- High proof flammable spirit
- Cinnamon powder

INSTRUCTION

- Build the tower with glassware's on the top of the cocktail serving glass
- Take high proof spirit in another glass and flame the spirit
- Pour the flaming spirit from the top of the tower

Pro tip: We can use cinnamon powder to dust on flaming tower to improve the visualization of the the flaming tower.

6. FLAVOUR INFUSED ICE

EQUIPMENTS REQUIRED

- Flavouring agent
- Ice sphere mold
- Water

INSTRUCTION

- Mix the flavouring agent with water or spirit
- Pour into the ice mold and freeze
- Serve to the customer with flavoured ice with mixers and alcohol

7. BOOZY POPSICLES

EQUIPMENTS REQUIRED

- Cocktail making ingredient
- Popsicle making mold
- Freezer

INSTRUCTION

- First prepare the cocktail
- Pour to the popsicle mold and freeze
- Serve to the customer

8. FLAVOURED FOAM

EQUIPMENTS REQUIRED

- Mixing glass
- Milk Frothier
- Egg white
- Flavourings agent

INSTRUCTION

- Mix the flavouring agent and egg white in the mixing glass
- Use the frothier to make flavoured foam
- Serve it over any cocktail/Serve it on a spoon

Pro tip: We can use the flavoured foam as garnish over cocktails and we can also use the flavoured foam as an accompaniment while serving the cocktails.

9. FLAVOURED AIR

EQUIPMENTS REQUIRED

- Mixing glass
- Hand blender
- Air pump
- Soy lecithin powder
- Flavouring agent

INSTRUCTION

- Mix the flavouring agent with soy lecithin powder
- Blend the mixture using hand blender
- Use the air pump to create flavoured air
- Serve the flavoured air with cocktails as a garnish

Pro tip: If the soy lecithin powder is not available you can substitute the soy lecithin powder with egg white.

COCKTAIL RECIPES

COSMOPOLITAN

Vodka - 45 ml
 Cranberry juice - 45 ml
 Triple sec - 15 ml

Method : Shaken
 Glass : Martini
 Garnish : Orange peel

BLOODY MARRY

Vodka - 45 ml
 Tomato juice - 90 ml
 Lemon juice - 15 ml
 Tabasco sauce - 2 dash
 Worcestershire sauce - 2 dash
 Celery salt - A pinch

Method : Build up
 Glass : Highball
 Garnish : Celery stick

BLACK RUSSIAN

Vodka - 30 ml
 Coffee liqueur - 30 ml

Method : Stirred
 Glass : Old fashioned
 Garnish : Coffee beans

ESPRESSO MARTINI

Vodka - 45 ml
 Espresso - 30 ml
 Sugar syrup - 15 ml

Method : Shaken
 Glass : Coupe
 Garnish : Coffee bean

PORNSTAR MARTINI

Vodka - 45 ml
 Passion fruit purée - 30 ml
 Vanilla essence - 4 - 5 drops
 Lemon juice - 15 ml

Method : Shaken
 Glass : Coupe
 Garnish : Passion fruit

HARVEY WALLBANGER

Vodka - 30 ml
 Galliano - 15 ml
 Orange juice - 90 ml

Method : Build up
 Glass : Highball
 Garnish : Orange wheel

MOSCOW MULE

Vodka - 45 ml
 Lime juice - 15 ml
 Top up with ginger beer

Method : Build up
 Glass : Copper mug
 Garnish : Lemon wheel / mint spring

SEX ON THE BEACH

Vodka - 45 ml
 Peach schnapps - 15 ml
 Orange juice - 60 ml
 Cranberry juice - 60 ml

Method : Build up
 Glass : Highball
 Garnish : Orange slice

WHITE RUSSIAN

Vodka - 45 ml
Coffee liqueur - 15 ml
Fresh cream - 15 ml

Method : Build up
Glass : Old fashioned
Garnish : Chocolate stick

BLUE LAGOON

Vodka - 45 ml
Blue curacao - 15 ml
Lemon juice - 15 ml
Top up with lemonade

Method : Build up
Glass: Highball
Garnish: Orange slice

BLUE HAWAIIAN

White rum - 45 ml
Pineapple juice - 90 ml
Blue Curacao - 15 ml

Method : Shaken
Glass : Hurricane
Garnish : Pineapple slice

DARK N STORMY

Dark rum - 45 ml
Lemon juice - 15 ml
Top up with ginger ale

Method : Build up
Glass: Highball
Garnish: Lemon wedge

DAIQUIRI

White rum - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30 ml

Method : Shaken
Glass : Coupe
Garnish : Lemon wheel

MAI TAI

White - 30 ml
Dark rum - 30 ml
Orgeat - 15 ml
Pineapple juice - 60ml
Orange juice - 60 ml

Method : Shaken
Glass: Old fashioned
Garnish: Pineapple slice

HURRICANE

White rum - 30 ml
Dark rum - 30 ml
Orange juice - 90ml
Passion fruit pure - 30 ml
Grenadine syrup - 15 ml

Method : Shaken
Glass : Hurricane
Garnish : Orange wheel

CUBA LIBRE

White - 45 ml
Lemon juice - 15 ml
Top up with cola

Method : Build up
Glass: Highball
Garnish: Lemon wedge

GIN & TONIC

Gin - 45 ml
Top up with tonic water

Method : Build up
Glass : Highball
Garnish : Lemon wedge

NEGRONI

Gin - 30 ml
Campari bitter - 30 ml
Sweet vermouth - 30 ml

Method : Stirred
Glass : Old fashioned
Garnish : Orange peel

SOUTH SIDE

Gin - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30ml
Mint leaves - 7-8

Method : Shaken
Glass : Coupe
Garnish : Mint spring

MARTINI

Gin - 45 ml
Vermoth - 15 ml

Method : Stirred
Glass : Martini
Garnish : 3 olives

SINGAPORE SLING

Gin - 30 ml
Cherry brandy - 15 ml
Angustra bitter - 2 dash
Pineapple juice - 90 ml
Lemon juice - 15 ml
Grenadine syrup - 15 ml

Method : Shaken
Glass : Highball
Garnish : Lemon wedge

PINK LADY

Gin - 45 ml
Grenadine syrup - 15 ml
Egg white - 1 nos

Method : Shaken
Glass: Coupe
Garnish: Cherry

PALOMA

Tequila - 45 ml
Lime juice - 15 ml
Top up with grapefruit soda

Method : Build up
Glass : High ball
Garnish : Grapefruit slice

EL DIABLO

Tequila - 30 ml
Crème de cassis- 15 ml
Lemon juice - 15 ml
Top up with ginger ale

Method : Build up
Glass: Highball
Garnish: Lemon wedge

MARGARITA

Tequila - 45 ml
Cointreau - 15 ml
Lemon juice - 15 ml

Method : Shaken
Glass : Margarita
Garnish : Lemon wheel

TEQUILA SUNRISE

Tequila - 45 ml
Orange juice - 120 ml
Grenadine syrup - 15 ml

Method : Build up
Glass : Highball
Garnish : Orange wheel

BRAVE BULL

Tequila - 30 ml
Coffee liqueur - 30 ml

Method : Build up
Glass : Old fashioned
Garnish : Coffee bean

TEQUILA SOUR

Tequila - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30 ml
Egg white - 1 nos

Method : Shaken
Glass : Coupe
Garnish : Lemon slice

OLD FASHIONED

Burbon whisky - 45 ml
Angustra bitter - 2 dash
Sugar cube - 1
Few dashes of plain water

Method : Stirred
Glass : Old fashioned
Garnish : Orange peel

WHISKY SOUR

Whisky - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30 ml
Egg white - 1 nos

Method : Shaken
Glass : Old fashioned
Garnish : Drops of angustra bitter

MINT JULEP

Burbon whisky - 45 ml
Mint leaves - 4 - 6
Sugar syrup - 15 ml
Few splash of plain water

Method : Muddled
Glass : Silver cup
Garnish : Mint spring

GOD FATHER

Whisky - 30 ml
Amaretto - 30 ml

Method : Stirred
Glass : Old fashioned
Garnish : Grated almond

MANHATTAN

Canadian whisky - 30 ml
Sweet vermouth - 15 ml
Angustra bitter - 2 dash

Method : Stirred
Glass : Old fashioned
Garnish : Cherry

IRISH COFFEE

Irish whisky - 45 ml
Fresh cream - 30 ml
Black coffee - 90 ml

Method : Build up
Glass: Irish coffe mug
Garnish: Coffee bean

SIDE CAR

Brandy - 30 ml
Orange liqueur - 15 ml
Lemon juice - 15 ml

Method : Shaken
Glass : Coupe
Garnish : Orange peel

TOM COLLINS

Gin - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30 ml
Top up with sparkling water

Method : Build up
Glass: Highball
Garnish: Lemon slice

BRANDY SOUR

Brandy - 45 ml
Lemon juice - 30 ml
Sugar syrup - 30 ml
Egg white - 1 nos

Method : Shaken
Glass : Coupe
Garnish : Lemon wheel

BRANDY ALEXANDER

Brandy - 30 ml
Crème de cacao- 15 ml
Fresh cream - 30 ml

Method : Shaken
Glass: Coupe
Garnish: Chocolate stick

BETWEEN THE SHEETS

Brandy - 30 ml
White rum - 15 ml
Orange liqueur - 15 ml
Lemon juice - 15 ml

Method : Shaken
Glass : Coupe
Garnish : Orange peel

THE HOURSE NECK

Brandy - 45 ml
Angustra bitter - 2 dash (optional)
Top up with ginger ale

Method : Build up
Glass: Highball
Garnish: Orange peel

LONG ISLAND ICE TEA

Vodka - 30 ml
White rum - 30 ml
Gin - 30 ml
Tequila - 30 ml
Orange liqueur - 15 ml
Lemon juice - 15 ml
Top up with cola

Method : Build up
Glass : High ball
Garnish : Lemon wedge

SUFFERING BASTARD

Brandy - 30 ml
Gin - 30 ml
Angustra bitter - 2 dash
Lime juice - 15 ml
Top up with ginger ale

Method : Build up
Glass : Highball
Garnish : Orange peel

MICHALEDA

Beer - 300 ml
Tomato juice - 90 ml
Worcestershire sauce - 3 - 5 dash
Tabasco sauce - 3 dash
Soy sauce - 5 ml

Method : Build up
Glass : Beer mug
Garnish : Lemon wheel

SHANDY

Ginger beer - 120 ml
Lemon juice - 30
Top up with beer

Method : Build up
Glass : Beer pilsner
Garnish : lemon wheel

QUEEN MARY

Beer - 250 ml
Grenadine syrup - 30 ml

Method : Build up
Glass : Beer mug
Garnish : Maraschino cherries

BEERGARITA

Tequila - 45 ml
Lemon juice - 30
Cointreau - 15 ml
Top up with beer

Method : Build up
Glass : Beer mug
Garnish : lemon wheel

FRUITY RED SANGARIA

Red wine - 120 ml
Orange juice - 60 ml
Cranberry juice - 60 ml
Cinnamon syrup - 15 ml
Fresh fruits - Orange, apple, lemon

Method : Build up
Glass : Red wine
Garnish : Fresh fruits

SPARKLING WHITE SANGARIA

Sparkling White wine - 120 ml
Fresh fruits - Berry, orange, lemon,
Rosemary syrup - 15 ml

Method : Build up
Glass : White wine
Garnish : Rosemary spring

RED WINE SANGRIA

Red wine - 120 ml
Brandy - 30 ml
Fresh fruits - Orange, Apple, lemon

Method : Build up
Glass : Red wine
Garnish : Fresh fruits

WHITE WINE SANGRIA

White wine - 120 ml
Fresh fruits - Strawberry, apple, pear,

Method : Build up
Glass : White wine
Garnish : Fresh fruits

MIMOSA

Sparkling wine - 60 ml
Orange juice - 60 ml

Method : Build up
Glass : Champagne tulip
Garnish : Orange slice

STRAWBERRY MIMOSA

Sparkling wine - 60 ml
Orange juice - 60 ml
Strawberry syrup - 15 ml

Method : Build up
Glass : Champagne tulip
Garnish : Strawberry

KAMIKAZE

Vodka - 30 ml
Triple sec - 30 ml
Lemon juice - 15 ml

Method : Shaken
Glass : Shot glass
Garnish : Lemon wedge

BLUE KAMIKAZE

Vodka - 30 ml
Blue curacao - 30 ml
Lemon juice - 15 ml

Method : Shaken
Glass : Shot glass
Garnish : Lemon wedge

B - 52

Coffee liqueur - 10 ml
Irish cream - 10 ml
Grand marnier - 10 ml

Method : Build up
Glass : Shot glass
Garnish : Fire

BRAIN HEMORRHAGE

Peach schnapps - 10 ml
Irish cream - 10 ml
Blue curacao - 10 ml
Grenadine syrup - 10 ml

Method : Build up
Glass : Shot glass
Garnish:

ABOUT THE AUTHOR

ARCHIT SINGHAL

Before entering the hospitality industry, Archit garnered over 6 years of experience in investment banking with firms like E&Y, BDO, Escort Mutual Fund, and Prabhudas Lilladher, specializing in market research, valuation, and investment management. He is married and blessed with a daughter, balancing his professional achievements with personal fulfillment.

However, Archit's narrative takes an exciting turn as he emerges as the creative force behind over 10 hospitality brands, including Cocktail Week, Beer Week, Elixir Bar Solutions, To the Teaz, Chai Lelo, and the India Bartender's Guild.

Recognized with the 2021 Economic Times Inspiring Leaders Award for North India, Archit's fusion of finance and hospitality embodies innovation and success. He currently serves as the President of India's Bartender's Guild and has successfully facilitated India's membership in the International Bartender Association. Recently, he established the IBG Bar Academy, aiming to provide training and mentorship to aspiring bartenders from underprivileged backgrounds, thereby striving to elevate bartending to a respected profession with equitable pay and standardized certification programs.

The IBG Ultimate Bartender Book is a deep dive in to the craft of bartending, blending practical knowledge with the artistry behind every cocktail.

From understanding alcohol chemistry to mastering the presentation of drinks, this guide is designed to take bartenders on a journey through the world of beverages. With sections covering essential bartending techniques, cocktail recipes, and responsible drinking, it provides a well-rounded approach to the profession. It can be used by bar academies and IHM colleges as well beginners and seasoned hospitality professionals. This is a bar manual which offers the tools needed to excel in the industry while upholding the highest standards of the profession.

"The IBG Bartending Manual is a comprehensive guide that brings together the art, science, and skill of modern bartending."

-Archit Singhal,

Founder, India Bartender's Guild

Archit Singhal,

Archit's journey unfolds from the world of finance to the realm of hospitality, marking a significant transition that has defined his remarkable trajectory. Armed with a B.Com (Hons), MBA in Finance and Business Management from IIM Lucknow, and a CFA charter, he has mastered the numbers game. However, Archit's narrative takes an exciting turn as he emerges as the creative force behind over 10 hospitality brands, including Cocktail Week, Beer Week, Elixir Bar Solutions, India Bar Show, Chai Lelo, The Cocktail Shop and the India Bartender's Guild.

Binu Thankachan,

A self-motivated flair artist and trainer with a natural passion and enthusiasm for the art of bartending. With over 10 years of experience in bartending education and the beverage management industry.
