

CONTENT

MODULE 1: THE I.B.A. AND THE A.B.E.C.

- ☐ What are IBA and (your local guild)?
- ☐ IBA Founding Countries
- ☐ Expansion of the IBA and member countries.
- ☐ The admission of (your local guild) to the IBA.
- ☐ Courses and competitions organized by IBA.
- ☐ The roles of the different committees within the IBA.

MODULE 2: THE ROLE OF THE BARTENDER/SOCIAL SKILLS.

- ☐ What is BEING BARTENDER?
- ☐ The role of the bartender in his workplace.
- ☐ Basic knowledge of bartender social skills.
- ☐ Sales techniques.
- ☐ The bartender's responsibilities with respect to the underage drinking law.
- ☐ Liability of the bartender in relation to excessive alcohol consumption.
- ☐ Importance of safety practices at work.
- ☐ Handling of complaints.
- ☐ Importance of following correct labor complaint procedures.
- ☐ Bartender's Decalogue

MODULE 3: ALCOHOL AND THE BARTENDER

- ☐ Alcohol its effects on people and society in general.
- ☐ The nature of the alcohol.
- ☐ The effects of alcohol on the human body.
- ☐ the effects of alcohol on society and cultures.
- ☐ Alcoholic strength of the drinks.
- ☐ Safe levels of alcohol consumption.
- ☐ Indicators to identify intoxicated customers.
- ☐ Responsible beverage consumption practices.
- ☐ The benefits of alcohol for society.

MODULE 4: EQUIPMENT, GLASSWARE AND MACHINERY.

- ☐ Types of standard equipment in a good bar.
- ☐ Correct uses of each piece of this equipment.
- ☐ Standard glassware from a good bar.
- ☐ Glassware uses for various beverages
- ☐ Fixed machinery used in the bar.
- ☐ Cleaning and maintenance procedures for bar equipment and machinery.

MODULE 5: TYPES OF BARS.

- ☐ Bar styles around the world.
- ☐ The function of each type of bar.
- ☐ The category your workplace fits into.
- ☐ Local bars within the different specific groups.

MODULE 6: CLASSIFICATION OF THE MIXED BEVERAGES AND COCKTAILS

- ☐ General classification of mixed drinks.
- ☐ Categories and types of cocktails.
- ☐ Popular drinks in each category.
- ☐ Beverage preparation methods.
- ☐ Equipment and glassware required for the preparation of different types of cocktails.
- ☐ Reasons why we use different methods to make cocktails.
- ☐ Main points of selection and preparation of garnishes and decorations.
- ☐ Terminology used in the preparation and service of beverages.
- ☐ Mixology: Definition, classification
- ☐ Classic IBA cocktails.
- ☐ Bases of stock control and bar inventories.

MODULE 7a: CLASSIFICATION OF ALCOHOLIC PRODUCTS.

- ☐ General classification of products usually available in the international market.
- ☐ Main categories of beverages that should be classified.
- ☐ Definition and description of each category.
- ☐ Types of products that can be included in these categories.
- ☐ Raw materials used to make each type of product.
- ☐ Alcohol content of each category.
- ☐ Countries of origin /D.O.C. /A.O.C/C.O.D.
- ☐ Home regions or districts.
- ☐ Main features of each product.

MODULE 7b: CLASSIFICATION OF NON-ALCOHOLIC PRODUCTS.

- ☐ Fruit juices.
- ☐ Pre-mixes
- ☐ Syrups/ Syrops/ Cordials/ Syrups.
- ☐ Water.
- ☐ Miscellaneous.

FINAL EVALUATION

MODULE 1

The I.B.A. AND THE (your local guild)

The expected learning outcome of this module is that the participant can;

- ☞ Understand about the founding of the I.B.A. and the (your local guild)
- ☞ To know which countries were the founding members of the I.B.A.
- ☞ Understand how the I.B.A. has expanded since its founding.
- ☞ Know when the (your local guild) became a member of the I.B.A.
- ☞ To learn about the courses and competitions organized by the I.B.A. and the (your local guild).
- ☞ Know the functions of the various committees within the I.B.A. and the (your local guild)

The I.B.A.- FOUNDATION.

The International Bartenders Association was officially founded during a meeting that took place at the Grand Hotel Torquay in England on February 24, 1951.

**INTERNATIONAL
BARTENDERS
ASSOCIATION**

The meeting was attended by delegates from seven nations, namely:

- ☞ W.J. Tarling (U.K.B.G.) United Kingdom
- ☞ J.. Londahl (D.B.L.) Denmark
- ☞ Combettes (G.A.B.F.) France
- ☞ T.. Rijken (N.B.C.) Holland
- ☞ A. Zola (A.I.B.E.S.) Italy
- ☞ P.. Melin (S.B.G.) Sweden
- ☞ G.. Sievi (S.B.U.) Switzerland

Thirteen other people also attended as representatives, observers or in an advisory capacity (including future E.D.C. member Luigi Parenti).

Thanks to the cooperation of all those present, the meeting was successful and resulted in the official founding of the I.B.A.

Mr. W.J. Tarling, Mr. J.P. Finney, and Mr. H.W. Roberts (all U.K.B.G.) They were appointed President, Treasurer and Secretary respectively of the new Association.

All those present expressed the hope that the association would expand its membership and activities in the future.

A second meeting was planned for London in 1952, however, very few countries were able to attend, which in truth only took place at the request of O.B.C. (Norway) to become a member of the I.B.A.; Which was received and accepted into the I.B.A. through a written procedure and the consent of all the I.B.A. members.

I.B.A. MEETINGS

The second I.B.A. Meeting took place in Venice at the Royal Danielli Hotel on October 9, 1953. At this meeting, the application of the D.B.U. (Germany) to become a member was successful.

The third I.B.A. Meeting was held at the De Hooge Vuursche Hotel, in Laren, Holland in 1954. Since this time the I.B.A. meetings have taken place annually, usually during the fall, when it was considered by most to be the lowest season in the bars.

The participants in the 1954 meeting agreed to organize the first "International Cocktail Competition" the following year, which took place in Amsterdam and was won by Mr. Guiseppe Neri (A.I.B.E.S.) With its "Conca d' oro" cocktail.

EXPANSION AND REGISTRATION

The Association expanded rapidly, in 1961 there were 17 member countries registered, in 1971 there were 24 and before 1981 there were 29 countries in the I.B.A. There are currently (2023) 64 member countries.

In order for an association to be admitted to the I.B.A. it must submit the list of its officers, its list of members and its statutes, as well as an application for official admission to the I.B.A.; for the IBA President and the other Presidents of the member countries to consider him as an observer at the next I.B.A. meeting. After 3 years of participating as an observer in the annual general meeting and in the W.C.C. then the entire general assembly welcomes him as a new official IBA member.

After the changes made to the I.B.A. statute during 1975. At the I.B.A. Meeting held in St. Vincent, three Vice-Presidents were elected by the member countries, one for each of the sections: Europe, Asia, and America.

During 1977 at the I.B.A. Meeting held in Rio de Janeiro the number of Vice-Presidents was increased to four, to include one Vice-President for South America. The objective was to allow Spanish and Portuguese-speaking countries to associate and help them in their relations with the I.B.A. in South America, since the official language of the I.B.A. is English.

In October 2002 at the Golf Hotel Meeting, Bled - Slovenia, the Vice-Presidency for the Southern Hemisphere was created, thus integrating 5 Vice-Presidencies.

The IBA was officially registered in Singapore on 30 March 2006. The official registration number is ROS: 1005/2006 and its headquarters are in Singapore.

In 2018 at the Estonian meeting, the board of directors was restructured, and it was confirmed that any of these officials can be re-elected for up to 3 consecutive terms of 3 years each:

President.

Secretary.

Treasurer.

V.P Education.

V.P. Public Relations or Communication.

V.P. Flairtending.

V.P. Classic.

THE PRESIDENCY

The presidency of the I.B.A. as well as all I.B.A. officials are honorary positions; No wages or fees are paid to any charge.

Following the change of the rules agreed during the I.B.A. Venice 1980 Meeting, the presidency is assumed by the candidate of a national association, therefore, in the event that a president does not finish his term, the presidency is assumed by the candidate of

the titular association until the next I.B.A. Meeting takes place.
Elections for IBA officers are held by secret ballot, with one vote for each member country regardless of the number of members each association has and are always held during an I.B.A. Meeting.

Since its foundation, La I.B.A. It has had the following presidents: -

Mr. W.J. Tarling and Mr. G.A. Baker until the end of the U.K.B.G.
(1951-1953) Mr. G. Sievi of the S.B.U. 1954 - 1957

Mr. P. Grandi and Mr. Zola until the end of the A.I.B.E.S. (1957 –
1959) Mr. K. Soerensen of the D.B.L. (1960 – 1963)

Mr. A. Zola and Mr. Preti until the end of the A.I.B.E.S.
(1963-1976) Mr. S. Preti of the A.I.B.E.S. (1977 – 1980)

Mr. M. Bigot of the A.B.F. (1981 – 1986)

Mr. U. Caselli of the A.I.B.E.S. (1987 – 1992)

Mr. Van Hagen of the N.B.C. (1993 – 1998)

Mr. U. Caselli of the A.I.B.E.S. (1999 – 2005)

Mr. Derrick Lee of the A.B.S. (2006 – 2014)

Mr. Ron Busman of NBC (2015 – 2017) Mr.

Mr. Pepe Dioni of the F.A.B.E. (2017-2021)

Mr. Giorgio Fadda of AIBES. (2021 - 2024)

Mr. Bruno Santos of UBCM (2024)

FINANCE

The financing of the I.B.A. was always thanks to the contributions of member associations which were progressively adjusted until the decision was made to base them on the funds available in an association and its number of members.

The I.B.A. voluntary individual membership card for members of various associations was adopted during 1976 at the I.B.A. St. Vincent Meeting. Originally it was granted every year and then the card could be permanent, but it has always been based on the person retaining the membership of the national association to which he or she belongs.

The I.B.A. was initially exclusively for male bartenders until 1975 when it was decided to admit female bartenders in accordance with the individual rules and regulations of the member associations.

TRAINING (TRAINING)

During the 1965 I.B.A. Meeting in St. Vincent it was emphasized that the I.B.A. had to promote initiatives in favor of young bartenders, particularly with regard to training. He decided to establish the I.B.A. TRAINING CENTRE, organizing courses open to all I.B.A. members under the age of 28; thus, the president of the Union of Bartenders of Luxembourg (L.B.U.) was asked to analyze the possibility of founding the headquarters in Luxembourg, given its central geographical position among other European member countries of the I.B.A. Therefore, the first I.B.A. TRAINING CENTRE was organized in Diekirch in 1966 and was held there until 1972 under the direction of Mr. Jean Schambourg.

During the 1972 I.B.A. Meeting in Stockholm, the decision was taken to transfer the course to the United Kingdom under the direction of the U.K.B.G. and with the cooperation of the Blackpool College of Technology and Art; the director of the course was Mr. John Whyte who expanded the course radically

and was responsible for its direction until his death in Italy in 1976 on the eve of the I.B.A. Meeting in St. Vincent. Any interruption would have run counter to the I.B.A. Tradition, so A.I.B.E.S. undertook to continue the course with the cooperation of the Hotel Stresa Worker Training School. True to the memory of Mr. John Whyte, the I.B.A. dedicated the training course to him and since that time the course has been known as the "John Whyte Course" wherever it is given.

From 1977 to 1981 A.I.B.E.S. was responsible for the I.B.A. Training Centre "John Whyte Course" under the direction of Mr. Luigi Parenti and with the cooperation of the Vice-President A.I.B.E.S., Mr. Nino Cedrini.

From 1982 the course was organized by A.B.P. (Portugal) under the direction of Mr. J. Poejo Mendes and was held in the Portuguese regions of Porto and Algarve until 1987.

From 1988 to 1991 the "John Whyte Course" was organized in Italy by A.I.B.E.S. again. Under the direction of Mr. Giuseppe Diani, President of A.I.B.E.S. Who was responsible for the course that was coordinated by Mr. Luigi Parenti.

From 1992 to 1996 the "John Whyte Course" was organized by the N.B.F. in Norway and directed by Mr. Steiner Gil, President of the Norwegian Bartenders Association. During 1992 at the I.B.A. Meeting in Toronto, Canada, it was decided to fulfill the wish of numerous I.B.A. member countries to institute a second place for the "John Whyte Course". The A.B.S. of Singapore took over organizing the course in the Far East. Since 1993 in Asia the equivalent of the course was taught at the SHATEC Hospitality School in Singapore under the direction of Mr. Low Yen Siong, President of A.B.S."

From 2001 the course was renamed "The Elite Bartenders Course-JWC".

EDUCATION DEVELOPMENT COMMITTEE

E.D.C. EDUCATION DEVELOPMENT COMMITTEE

In 1987 the I.B.A. meeting in Rome of the Education Development Committee (E.D.C.)

It was formed with members from England and Scotland (U.K.B.G.) Ireland (B.A.I.) France (A.B.F.) Portugal (A.B.P.) and Italy (A.I.B.E.S.) with the task of organizing and subsequently achieving the development of internationally recognized norms and standards and their certification, the final part of the program being the "John Whyte Course".

The impressive final result of the committee for this course was named "E.D.C." which is the IBA's Education Development Committee; "Committee for the Development of Education I.B.A."

In 1988, during the I.B.A. meeting in Lisbon, Portugal, the scheme and distribution of the E.D.C. was drastically revised in view of the possibility of achieving better acceptance by all the member countries of the I.B.A.

It was recognized that the E.D.C was the best for all young I.B.A., regardless of their respective domicile, their training, knowledge of languages and/or high school.

EDC Committee: Visit to AIBES in Milan as part of the agenda of the EDC meeting 2013 held in Venice, Italy.

COMPETITIONS AND PRIZES

The "International Cocktail Competition I.B.A." was organized annually from 1958 to 1965 and then every two years until 1976. It has then been organized every three years since 1976 and has become a standard format of Pre Dinner, After Dinner and the Long Drink Competition.

In 1966 the "Premio Paissa" started by the Martini and Rossi Company as a competition for young bartenders under the age of 28, was originally only for A.I.B.E.S. members but was expanded to "international" in 1970. In 1982 the competition entered a new phase with a new format and the name was changed to 'Martini Grand Prix'.

In 1966, it was agreed during the various meetings and competitions that the I.B.A. would award the I.B.A. Medal of Honour to those production and distribution companies that take a particularly active role in the IBA's international activities.

In 1978 at the I.B.A. Meeting in Paris, two special awards were given to two previous national presidents who had retired from office after having served with great distinction for many years, these were Mr. Félix Cotto (A.B.F.), France and Mr. Bruno Winter (D.B.U.), Germany.

Undoubtedly the most honorable and desired award in the world of Bartenders is the "Angelo Zola Award", awarded by the family of the former President of the I.B.A. Angelo Zola in his memory, which is presented every year to the bartender who has contributed the most to the honor of his profession. The winners of this highly coveted award were as follows:-

1978	Mr. Yoshiaki Sawai	–	Japan
1979	Mr. Roger Lebet	–	Switzerland
1980	Mr. Federico Marcello	–	Italy
1981	Mr. Stefano Preti	–	Italy
1982	Mr. Felix Cotto	–	France
1983	Mr. Peter Brennan	–	United Kingdom
1984	Mr. Gianfranco Calore	–	Venezuela
1985	Mr. George Broucke	–	Belgium
1986	Mr. Jan van Hagen	–	Holland
1987	Mr. Charles Chop	–	United States of America
1988	Mr. Luigi Parenti	–	Italy
1989	Mr. Per Valet	–	Denmark
1990	Mr. Santiago Policastro	–	Argentina
1991	Mr. Michel Bigot	–	France
1992	Mr. Jürgen Falcke	–	Germany
1993	Mr. Charles Rendes	–	Canada
1996	Mr. Roland Rochat	–	Belgium
1999	Mr. Brian Page	–	United Kingdom
2002	Mr. Alexander Beaumont	–	Australia
2005	Mr. Umberto Caselli	–	Italy
2008	Mr. Jorge Moniz Pereira	–	Portugal
2011	Mr. José Ancona	–	U.S.A.
2014	Mr. Derrick Lee	–	Singapore
2016	Mr. Kenji Nakamura	–	Japan
2023	Mr. Hidetsugu Ueno	-	Japan
2024	Mr. Nepomuceno Ramírez	-	Venezuela

IBA. COMMITTEES

Apart from the business that takes place at an I.B.A. Meeting, the I.B.A. also has, or has had, a number of committees that continue with specific tasks over the years and report to the I.B.A. at its annual meetings. There are or have been committees formed to observe and reform the rules of the "International Cocktail Competition" (I.C.C) The committees to update the I.B.A. rules, to standardize a number of classic cocktails and a committee to record the official history of the IBA, as well as the Education Development Committee (E.D.C), whose function has already been described. These committees are generally made up of experienced members and have proven to be very successful in continuing the work of the International Association outside of its current meetings.

WHEN AND WHERE ASSOCIATIONS BECAME MEMBERS OF THE I.B.A

Year	Guilds	Country	City of Réunion	Feedback
1951	D.B.L.	Denmark	Torquay, UK	Founder
1951	U.K.B.G.	England	Torquay, UK	Founder
1951	G.A.B.F.	France	Torquay, UK	Founder in 1965 A.B.F.
1951	N.B.C.	Holland	Torquay, UK	Founder

1951	A.I.B.E.S.	Italy	Torquay, UK	Founder
1951	S.B.G.	Sweden	Torquay, UK	Founder
1951	S.B.U.	Switzerland	Torquay, UK	Founder
1952	O.B.C.	Norway	London, UK	In 1960 N.B.F.
1953	D.B.U.	Germany	Venice, Italy	
1954	F.B.S.K.	Finland	Amsterdam	
	L.B.U.	Luxembourg	Amsterdam	In 1977 it is no longer I.B.A.
1956	A.M.B.A.	Argentina	London, UK	
1956	A.U.D.E.B.	Uruguay	London, UK	In 1960 it is no longer I.B.A.
1957	O.B.L.	Austria	Milan, Italy	
1957	B.L.B.U.	Belgium-Luxem.	Milan, Italy	Guilds – Twins
1959	A.N.B.A.	Japan	Copenhagen, Denmark	Since 1987 N.B.A.
1959	A.V.B.	Venezuela	Copenhagen, Denmark	
1961	U.B.B.	Belgium	Guadala, Norway	Independent Guild
1961	U.S.B.G.	United States of America	Guadala, Norway	In '84 U.S.B.A. - In '91 U.S.B.G.
1963	B.C.I.	Iceland	Saint. Vincent, Italy	
1964	A.B.E.	Spain	Edinburgh, UK.	
1966	A.B.G.	Australia	Geneva, Switzerland	
1967	S.B.Y.	Yugoslavia	Mallorca, Spain	In 1978 D.B.S. In 1991 Slovenia ex Yugoslavia
1968	B.A.C.	Canada	Paris, France	
1971	A.B.M.	Mexico	Tokyo, Japan	
1971	C.B.P.	Portugal	Tokyo, Japan	In 1975 he changed to A.B.P.
1972	A.B.B.	Brazil	Stockholm, Sweden	
	B.A.I.	Ireland	Stockholm, Sweden	
1974	K.B.A.	Korea	Copenhagen, Denmark	
1975	M.B.G.	Malta	Saint. Vincent, Italy	In 1976 he switched to Maltese Bartenders Ass
1979	S.B.H.	Hungary	Opa tija, Yugoslavia	
1985	A.L.B.	Luxembourg	Amsterdam	New Guild
1987	H.K.B.A.	Hongkong	Rome, Italy	
	A.B.S.	Singapore	Rome, Italy	
1989	A.P.B.	Peru	Helsinki, Finland	
1990	C.S.V.T.S.	Czechoslovakia	Mexico	It became the Czech Republic in 1993
1992	P.R.B.A.	Puerto Rico	Toronto, Canada	
1993	G.B.A.	Greece	Vienna, Austria	
1993	A.U.D.E.B.	Uruguay	Vienna, Austria	Re-admitted (association reform)

1994	P.B.A.	Poland	Monterroso, Italy	
1995	N.Z.B.G.	New Zealand	Toronto, Canada	
1995	B.A.T.	Taiwan	Toronto, Canada	
1995	T.B.D.	Türkiye	Toronto, Canada	
1997	H.S.B.	Croatia	Karlovy, Czech Republic	
1997	B.A.R.	Russia	Karlovy, Czech Republic	
1997	S.K.B.A.	Slovakia.	Karlovy, Czech Republic	
1998	P.B.L.	Philippines	Lisbon, Portugal	
1999	E.B.U.	Estonia	Gothenburg, Sweden	
1999	L.B.A.	Latvia	Gothenburg, Sweden	2011 no longer an I.B.A. Member.
2000	B.A.B.	Bulgaria	Singapore	
2002	A.C.C.	Cuba	Slovenia	
2002	U.B.C.G.	Montenegro	Slovenia	
2002	S.A.B.A.	Southern Africa	Slovenia	
2003	I.G.B.S.	Israel	Seville, Spain	
2003	B.A.S.	Serbia	Seville, Spain	
2005	AR.B.A.	Armenia	Helsinki, Finland	
2005	A.P.B.	Peru	Helsinki, Finland	Suspended
2006	CY.B.A.	Cyprus	Thessaloniki, Greece	
2006	U.B.A.	Ukraine	Thessaloniki, Greece	
2006	B.A.C	Canada	Thessaloniki, Greece	Expelled
2006	A.P.B.	Peru	Thessaloniki, Greece	suspension lifted.
2009	S.B.S.G.	Vietnam	Berlin, Germany	
	A.B.M.	Macedonia	Berlin, Germany	
	A.B.P.R.	Romania	Berlin, Germany	
2010	A.B.C.	China	Singapore	
	A.B.E.C	Ecuador	Singapore	
2012	K.B.G.	South Korea	Beijing, China	
2013	B.A.M.	Mexico	Beijing, China	
2013	A.B.EC	Ecuador	Prague, Czech Republic	Suspended
	U.N.A.BAR	Dominican Republic	Prague, Czech Republic	
2013	A.C.BAR	Colombia	Prague, Czech Republic	
2014	A.R.B.A.	Rep. Armenia	South Africa	
2014	D.B.S.	Slovenia	South Africa	
2015	A.B.E.C.	Ecuador	Sophia, Bulgaria	Suspension lifted
2015	A. CE.BA. CH.	Chile	Sophia, Bulgaria	
2017	U.B.C.M.	Macau	Copenhagen, Denmark	
2017	A.P.B.	Peru	Copenhagen, Denmark	Suspension lifted
2021	F.P.B.B.	Panama	China	
2023	BBA	Belize	Rome

SELF-ASSESSMENT QUESTIONS

The following questions are for your own personal assessment to ensure you understand the module, when you have completed them. Check your answers with the text. If you are satisfied with its performance then go to module 2. If not, repeat this module and try the questions again.

Name of the seven countries that attended the first IBA meeting and became the founding members.

From the information provided, when did your association become a member of the I.B.A.?

In which city was the IBA Meeting held when your association joined the I.B.A.?

Who was the first President of the I.B.A.?

Who is the current President of the I.B.A.?

Who is the Vice President of Education of the I.B.A.?

Where is the headquarters of the I.B.A.?

How many countries belong to the I.B.A today?

The "World Cocktail Competition" is now held every year, every 2 years, every 3 years, every 4 years, every 5 years.

The final I.B.A. training course is now known as:

On what date and where was (your local guild) founded?

Who is the current President of (your local guild)?

What is the fundamental mission of (your local guild)?

How many chapters does the (your local guild) have from which cities are they coordinated?

MODULE 2

BARTENDER ROLE / SOCIAL SKILLS

The expected learning outcome of this module is that the participant: -

- Y Understand the role of bartender in your workplace.
- Y Have a basic understanding of social skills.
- Y Have a basic understanding of sales techniques.
- Y Understand your responsibilities regarding alcohol consumption law.
- Y Understand your responsibility for excessive alcohol consumption
- Y Understand the importance of practicing safety at work.
- Y You will have a basic understanding of complaint handling procedures.
- Y Understand the importance of correct complaint handling procedures.

PERSONAL HYGIENE AND APPEARANCE

The greatest asset of any bartender is being able to create a good first impression to any potential customer. One of the most important factors in achieving this is personal appearance and hygiene. It is essential that their appearance is as impressive as possible, this can be achieved by paying special attention to the hands, nails, hair and shoes. Clothes should always be clean, tidy and well ironed. A bartender should avoid large, visible personal jewelry and for men ear decorations, such as earrings or a diamond. The appearance of the bartender should be clean, calm and high-class. Pride in personal appearance in a short time leads to pride in the appearance of your work environment.

Creating a social environment

The bar area, both for purposes of appearance and ease of work, should always be clean and tidy, the bottles should be well presented, with the labels facing forward. The cups must be clear for proper operation and control of the bar must be maintained during service hours. Floors should be clean and dry, free of obstruction, any spills should be cleaned up as soon as possible to avoid accidents. All the above will contribute to the social environment of the bar, but it is essential that the bartender has a more complete role in this function.

GREETING AND SEATING A CUSTOMER

All customers should be greeted on arrival, this helps to establish a relationship between the customer and the bartender, whenever possible, customers should be escorted to a bar table and seated, not only creates a good impression, but also helps you maximize seating arrangements. A group of two people sitting at a table designed for four means two 'dead' seats. Even if the bar is very busy, a customer may receive a greeting, only this time it could take a different form. For example, a smile or a nod of the head, perhaps a movement of the hand of a regular or well-known customer is understood to be busy and that on this occasion they could not be welcomed in their usual way, the important thing is that they know that they have noticed, and it is not ignored.

You should always take a customer's order as soon as possible, even if you know you can't serve for a few minutes. A customer will be happy to wait five minutes for their drinks to be served, after their order has been taken, but it would be very sad if they waited five minutes for their order to be taken, even though they will have their drink in the same amount of time. The difference is that he knows that he has been recognized and admitted and has not been ignored.

THE COMMUNICATOR / SALESMAN BARTENDER

After a customer is seated, or a customer sitting at the bar counter, we offer them a drink and show them the drinks or cocktails. Point them to any specialty from the bar or any of the promotions they're currently offering, perhaps a special cocktail created for a special event, or a drink made or garnished with a seasonal fruit that's already available, or even a new product that you think is worthy of pointing to the customer's attention.

When time permits, a good bartender who comes into verbal contact with his customer may pair two private customers who feel lonely, so that when he leaves the conversation, they can continue to talk to each other. Avoid all possible discussion of political, racial, or religious issues. Learn to be a good listener and if the customer talks about a topic that you know very little about, try to divert the conversation to a topic that you have some knowledge of. When you are a regular customer, you know that you could talk about the family, for example, ask about the school progress of a son or daughter, or if they have had holidays this year and if so, where did they go, what do they like, what do they recommend? These activities help to create a good atmosphere at the bar and make the customer feel that it is "their" bar, a place where they feel comfortable where they are known, where they like to be.

TOURIST AND GEOGRAPHICAL INFORMATION

Even for irregulars or tourists, it can help with many things that a visitor, and especially one from abroad, is unaware of or unsure about. For example, how to get to a certain part of the country, what station to go to or where to take a bus, what time the shops open and close, what is the best place for a special gift, where there is a good restaurant, what is in the cinema. It is also at this time that you can practice your sales techniques, recommend a restaurant or club that is part of your employer's company or group, you could offer to make the reservation for them.

ALCOHOL CONSUMPTION

You should be aware of the minimum age in your country that a person is allowed to consume alcoholic beverages or perhaps that they are allowed to enter a bar. In most countries, it is the legal duty of the person serving the drinks to ensure that the underage person is not served alcohol. Be aware of your legal responsibilities, serious problems can occur for both you and your bar if you neglect your legal responsibilities regarding this extremely important point.

IDENTIFICATION AND CONTROL OF EXCESSIVE CONSUMPTION

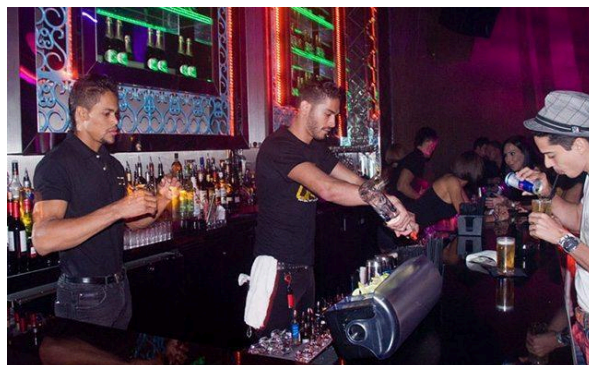

In most countries, it is the responsibility of the person serving the drinks to ensure that a customer is not under the influence of excessive alcohol. A customer who is drunk or who looks drunk and who can be loud and argumentative may not be of great value to any bar, a person can scare away good customers, to the detriment of the bar and yourself. Make sure you report that person to the head bartender on duty and under no circumstances should you serve them another drink. That person should be removed from the bar area as quickly and quietly as possible. Even a regular customer who has had too much to drink should quietly but firmly suggest to you that you should get out. In the long run, this is the best course of action, a regular customer who was drunk and made a fool of himself will rarely come back. You will probably prefer to find a new bar where you do not know it, but if you can put an end to this situation created, by the quick intervention before you reach this stage, you will not have lost it and that person will probably respect you and your bar for this.

SAFETY IN YOUR WORKPLACE

Some of the steps that can be taken to ensure that your workplace is as safe as possible for your co-workers, you, and your customers have already been referenced. Always immediately report any obvious safety hazards to the head bartender on duty, such as wet floors, uncovered, torn or broken electrical outlets, etc. If you have a report book, do so in writing, stating the time and to whom you reported this.

You can help make sure that accidents don't happen behind the bar by ensuring, for example, that sharp knives don't get left in a place where they can be accidentally handled, that things like pins in cigar boxes are removed and that broken glass is put in a safe container. never in a plastic bag. It is essential that emergency exits are always clear and in fact this is a legal requirement. Familiarize yourself with the position and types of fire extinguishers and other firefighting equipment and make sure you know evacuation procedures.

THE ABILITY TO WORK WITH COLLEAGUES

It is essential in a bar that there is good teamwork among staff members. Whenever you sympathize with your colleagues and their problems, make sure that the work is in a clean and orderly manner and that you don't leave a mess for someone else to clean it up, always leave your bar in the way you want to find it. You should also have good relationships with members of other departments within your establishment, you can't expect your bar to run smoothly if they don't get along with those your service may depend on such as wine cellar or kitchen.

COMPLAINT HANDLING

It's inevitable, no matter how hard you try not to, you'll always get a complaint. Never assume that because a person complaining is nothing more than someone annoying or unpleasant, they may not be aware of the circumstances that have led to the complaint. In most bars a complaints procedure has been established and this means that the most senior person on duty must always deal with it. When you receive a complaint, first, establish exactly what the complaint is. If you only must deal with this yourself then do it and inform the person in charge of what you have done, if you feel that you cannot deal with it for any reason, then tell the client that the person in charge will receive you and assist you as soon as possible. Inform the highest-ranking person in the service, tell him as many details as possible about the complaint and what he has done so far. Never get into an argument with the customer, if he starts yelling you should tell him that you are going to call his supervisor, walk away, do not say anything else. Your supervisor will have more time, will have more experience than you, and will be able to handle the situation better. If a customer tells you that one of the products in their stock is not of good quality or is of poor quality, then you could let them know that other customers like it and that is why they offer it. Never say that one product is better or inferior to another, this is just your opinion, and it may not be the same opinion as your customer's.

LABOR DISPUTES

If you have helped to achieve an atmosphere of joy for your customers, it is almost certain that they have achieved an environment of joy to work, but even so among colleagues it is not certain that good agreements will be achieved for vacations, days off or distribution of tips. If this situation were to arise then the person who should talk about it is your bar manager or head bartender, it will rarely help you leave your job with this type of problem, and it does not help at all to make your complaints to someone who does not know the full picture. Ask your head bartender if he can help you with your complaint, he can, for example, call a meeting of all the employees of the bar where any problem could be discussed sensibly, usually you will find that the smallest problems can be solved if everyone understands the situation. This is the way to get everyone working together for the common good, to get teamwork, that is the backbone of a good and successful bar.

SELF-ASSESSMENT QUESTIONS AND ASSIGNMENTS

The following questions are for your personal assessment to ensure you understand the module. When you have completed them, check your answers with the text. If you are satisfied with its performance, then go to module 3. If not, repeat this module and try the questions again.

How should you leave your bar area at the end of your work session?

Name four ways you could help create a better social atmosphere in your bar

What topics should you particularly avoid in a discussion or conversation with your customers?

What is the minimum age of a person who can legally consume alcohol in your bar? If you are not sure, find out.

If a customer has had too much to drink, what action should you take and why?

Identify areas in your bar that are a potential security risk. Make a report of these

What are the complaint procedures at your bar?

In your bar, where is the nearest device to fight the fire? Do you know how to use it? If not, ask for a demo.

What is the evacuation procedure at your bar?

Where is the nearest fire exit?

If you are unable to use this means of escape, what is the second escape route?

MODULE 3

ALCOHOL AND THE BARTENDER

The expected learning outcome in this module is that the participant:

- ☐ You will have a good basic knowledge of alcohol, its effects on the individual and society in general.
- ☐ Explain the nature of alcohol.
- ☐ Identify the effects that alcohol has on the human body and its behavior.
- ☐ Lists of the effects of alcohol on societies and cultures.
- ☐ Lists of the comparative advantages of alcoholic beverages.
- ☐ Identify "safe" levels of alcohol intake.
- ☐ Lists of indicators for the identification of drunk customers.
- ☐ Identify sensible drinking practices.
- ☐ Identify the "benefits" that alcohol has for society.

INTRODUCTION

As bartenders, we are tasked with serving and managing all kinds of people from all walks of life and strata of society. While the main one is an enjoyable and rewarding part of your job, there are many times when it can be one of the most difficult.

We have to be able to use all our senses at all times, our powers of observation, memory and attention are vital to ensure the success of our bar. We have a particularly difficult task when you consider that we have to deal with people who may have, at times, for various reasons, consumed too much alcohol. This situation requires patience, tact, firmness and above all experience in handling difficult situations that may have arisen due to excesses on the part of one or more clients.

The main goal of this module is, then, to increase your awareness of alcohol in a broader sense. What is it? What effects does it have? What are its advantages and disadvantages? These are some of the questions we will be addressing, and we sincerely hope that this module will help us make better decisions during your bartending career.

Remember that with a lot of drinking and a little carelessness, almost anyone can develop the disease called alcoholism, just like anyone will get cavities if they don't take care of their teeth. While some people are more susceptible to problems with alcohol than others, no one is immune to its effects.

If you are aware of the dangers of alcohol wisely you can avoid them.

ALCOHOL IN PERSPECTIVE

It is probably true that in most countries as consumption continues to grow, the trends of what brand and type of alcohol is consumed change, but in many countries the production/sale of alcohol is a very important part of the economy, as the alcohol taxes imposed by governments can be huge. The government's attitude towards alcohol varies from country to country, from the extremes of a complete ban on all alcohol in some Muslim countries to a lack of control in others.

However, most countries have some form of legislation to control the production, distribution, sale, and consumption of alcohol.

Strict laws, for example, exist in the Scandinavian countries, i.e. Norway, Sweden and Finland, where the import and sale of all alcohol is strictly controlled and taxes heavily taxed, along with severe penalties for drunk driving-related offences. The US and Canada are also very strict, the UK, Italy and France are quite a bit less strict. Some Mediterranean countries are undemanding.

Alcohol consumption is closely related to many social activities, such as vacations, dinners, entertainment, business and celebrations of course. It provides most consumers with great pleasure and causes them little or no harm, yet there is a small minority (small in percentage terms, but large in number) who have problems directly related to their drinking habits, (such as bartenders who are at least 10 times more likely to develop alcohol problems relative to the "average" person).

You may have discovered from other sources that alcohol is a depressant drug, all this means that it is a substance that influences physical, mental, social functions and is not just a food or fuel, the term does not imply anything sinister.

It's high in calories, low in vitamins and protein, what it does and how it does it will be covered in a different section. Prolonged and excessive consumption can lead to dependence.

When alcohol is consumed, it is absorbed into the bloodstream. It has an effect within 5 to 10 minutes, the effect can last for several hours, depending on how much has been consumed, even very small amounts, such as a couple of whiskeys and beers can affect the "motor skills" needed to operate machinery or drive a car, often resulting in accidents. Contrary to common belief, male sexual performance is reduced after alcohol consumption. The effect of alcohol varies depending on its strength, (see the guide later in this module), how quickly it is consumed, a person's gender, body weight, with or without food in the stomach, a person's personality, and the environment in which it is consumed. Alcohol can be dangerous if consumed with certain medical treatments, or drugs. It can also be dangerous to the fetus if the pregnant woman drinks alcohol excessively.

WHAT DOES ALCOHOL DO TO PEOPLE?

Alcohol is probably so popular not only because it seems like a "stimulant" that makes us feel better, better able to cope with life, relaxes any inhibitions you may have when you're around meeting people, and generally helps our social lives, but it also gives us the impression that we can achieve more if we've had drinks than if we haven't.

In fact, alcohol is a depressant that reduces the activity of the central nervous system and therefore the brain. Therefore, the initial effect of alcohol is to suppress things on the outside that usually control our inhibitions thus making us more excitable and open. This initial stimulating effect is short-lived. Everyone reacts to alcohol differently. Some become talkative to the point of being boring, some are sad and depressed, some are extroverted to the point of becoming noisy, some are violent, while some just want to sleep peacefully on their bar stool, this depends on the person and the way they feel unconsciously. This will influence your behavior after drinking alcoholic beverages.

What happens when alcohol is consumed?

After being ingested, alcohol travels to the stomach, where one-fifth of it is absorbed directly into the bloodstream. Alcohol is easily digested and can provide energy immediately (unlike most other things). Just a few minutes after consumption, there will be alcohol in all parts of the body. The rate at which alcohol is absorbed into your bloodstream can vary, and this will affect how quickly you start to feel drunk. It's when alcohol reaches the brain that things start to happen.

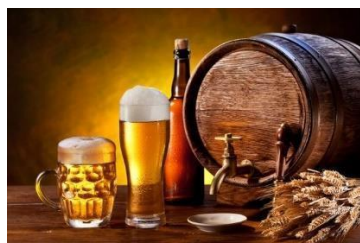

THE ALCOHOLIC STRENGTH OF VARIOUS DRINKS

Below is a guide to the APPROXIMATE alcohol content of a number of products.

BEERS

Beers with low alcohol content (1.0%). It is therefore necessary to consume approximately 1 liter; what is called a unit of alcohol

- ☞ Lager and normal 25 cl. at 4% = 1 unit
- ☞ De luxe 'pilsen' 17 cl. at 5.8% = 1 unit

WINES

Most Ports, Sherry, Madeira, and Vermouths are approximately

5.5cl at approximately 18% = 1 unit.

Better quality table wines, red table wines, most sparkling wines.

9 cl. of 12% = 1 unit.

SPIRITS

Most of them gin, rum, whiskey, brandy and strong spirits.

2.5cl at 40% = 1 unit

Other liquors vary depending on their strength.

Other approximate equivalents are as follows

- 1 bottle of table wine 75 cl = 9 units
- 1 litre of table wine = 12 units
- 1 bottle of liquor 75cl at 40% = 30 units
- 1 bottle of fortified wine, sherry, martini, port = 14 units
- 1 can of 330mls beer = 1.5 units

What is considered a safe drinking level?

Well, if you're a man and the total number of units in a week is more than 35 units, you're **drinking too much!**

If you are a woman and the total in a week is more than 20 units, you are **drinking too much!**

There are two main reasons to avoid reaching these limits.

1. Increase your chances of permanently damaging your liver.
2. That you are taking the risk of becoming addicted to alcohol. The reason for having a lower limit for women than men is that they are more likely to have liver disease and are more likely to become addicted.

You might tell yourself that so-called safety limits are absurd because almost everyone, including yourself, drinks more than the allowed limits. If you think this, then it means that your friends are drinking too much like you. The point is that some communities, groups of people drink much more than others, and since we have easy access to alcoholic beverages this is part of our livelihood, this is not a surprise, we probably know a large number of people who drink alcoholic beverages more than the basic limits. It's also critical to make it clear that even if your total amount of alcohol intake is below the limit, this doesn't necessarily mean that your drinking is completely safe, and it certainly doesn't mean that you should increase your drinking to the limit. There is no level of consumption that is completely safe for everyone, just as there is no level that is dangerous for everyone. For example, young people who have just started drinking may be less able to control alcohol and weekly amounts, even below the limit can still be too much! Also, the total for the week may be less than the limit, but you may still have had too much to drink once or twice during the week. The safety limit does not mean that you are free to take everything in one night. The last point to keep in mind is that the limits of 35 units for men and 20 for women are not the levels of consumption that are recommended. It is recommended that you drink much less than this in a week. 35 and 20 units **THE UPPER MAXIMUM LIMIT and MUST NOT BE EXCEEDED** if he wants to maintain health, family and work.

HOW TO MAINTAIN SAFE LEVELS OF CONSUMPTION?

If you feel like you're drinking too much alcohol, don't be afraid to seek help. First, stay within the levels stated above, in order to accomplish this there are several things you can do, below are some ideas.

BEFORE LEAVING:

- ☞ Set a reasonable 'MAXIMUM' of expenses and do not exceed it.
- ☞ Decide how much you intend to drink.

- ☞ Decide how long each drink should last.

If you feel that this is impossible to achieve, here are some tips on how to have better control of your consumption.

- ☞ Taking small sips sounds simple, taking small sips and sipping less often.
- ☞ Drop your glass between sips, if it is in your hand, you will drink more often.
- ☞ Don't just drink, do something more enjoyable, such as talking, reading, listening to music, eating (be careful with chips and nuts tend to make you thirsty, that's why we have them in bars).
- ☞ Try the less strong drinks.
- ☞ Drink to savor, not just swallow.
- ☞ Don't drink beer and spirits together, you get drunk much faster this way.
- ☞ If you drink spirits dilute them more, the longer the drinks usually are, the slower the speed of drinking it will be.
- ☞ Avoid drinking in rounds as much as possible, if you can't avoid them, get lost when it's your turn, or buy a soft drink such as ginger ale, tonic water, soda, low-alcohol beer, etc.
- ☞ Try a separator (a non-alcoholic beverage among the alcoholic ones) or simply refuse a drink from time to time.
- ☞ If there is someone in the company who has a "slow drinker" profile, he should not raise his glass until others do, take small sips, do other things with his hand.

HOW CAN YOUR BODY DEAL WITH ALCOHOL?

Less than one-tenth of the alcohol you consume is eliminated through urine and breathing. Most of what is left is eliminated by the body and this is done by the liver. As a result, the liver is one of the first parts of the body to be affected by excessive alcohol consumption. Alcohol is eliminated by the liver very slowly. In fact, it takes about an hour to remove one unit of alcohol. Of course, this means that alcohol stays in the system for a long time after you've been drinking. That's why you should be careful about driving in the morning after you've been drinking, because you might as well be over the legal limit in your country.

Drinking a black coffee, taking a cold bath, or getting some fresh air **WILL NOT RESTORE SOBRIETY**. Maybe that can make you feel a little better or make you feel less sleepy. The only thing you can sober up with is alcohol-free TIME. In the liver, alcohol becomes a source of energy which can be used by all tissues of the body. However, although alcohol gives you energy and can therefore reduce hunger, it does not replace the vital ingredients in your diet, for example: proteins, vitamins, etc.

Many heavy drinkers do not eat properly and therefore lack vitamins. The result of those who drink excessively tends to suffer from several very unpleasant diseases caused by a lack of vitamins. Alcohol also helps with weight gain; many heavy drinkers are also overweight (This does not mean that all overweight people are drinkers)

Alcohol has effects on you, this depends on the amount of alcohol in your blood. This is called the **BLOOD ALCOHOL CONCENTRATION or CAB. CABS** are generally recorded in milligrams of alcohol per 100 milliliters of blood. The amount of alcohol in the bloodstream depends on several factors, the most important of which are the following:

- ☞ Your weight – Thin people are affected more quickly than heavier people.
- ☞ Your gender – The same amount of alcohol has a greater effect on women than men. This is because women average better than men and have 10% less water in their bodies to dilute alcohol.
- ☞ Duration of time drinking – The faster you drink the effect will be greater, because the liver cannot eliminate it quickly enough, therefore, alcohol accumulates in your system. In addition, carbonated beverages enter the bloodstream more quickly, for example, a shot of whiskey with carbonated mixtures is opposed to one with still water.
- Food – The rate of absorption is slower if you have food in your stomach.

Below is a general guide on the effects of alcohol on different BAC levels. Since alcohol affects different people in different ways, it should be remembered that this is a rough guide.

CAB 20 You start to feel relaxed. There is a higher chance of a accident.

CAB 60 You are cheerful, you have the worst judgment and decisions can be affected.

CAB 80 You have a sense of warmth and well-being, there will be some loss of inhibition and self-control. Slow reaction time, driving ability is definitely bad.

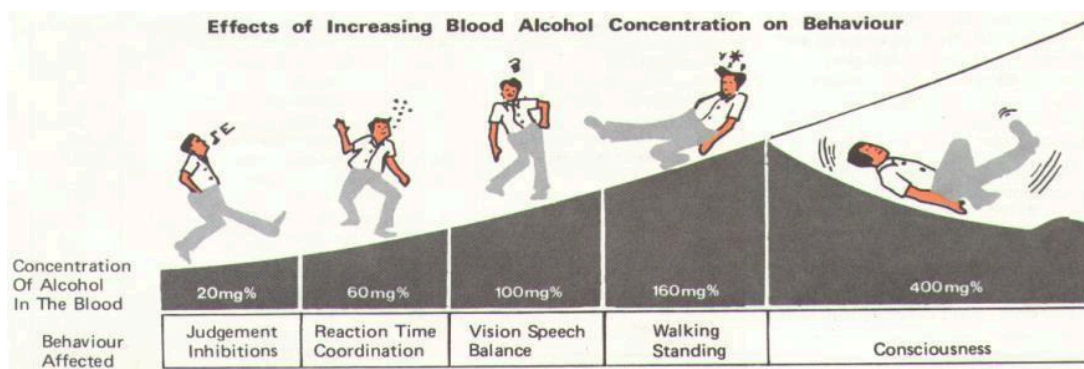

CAB 100 You become more communicative and emotional. You are inhibited and may act on impulse. Speech is slurred.

CAB 160 You're dumb and probably confused. They can be aggressive. Problems standing and walking.

CAB 200 Drunk Reeling vision blurred loss by heart.

CAB 400 Probable loss of consciousness, death in some cases.

CAB 500 Possible death.

HOW TO IDENTIFY A PERSON WHO HAS CONSUMED TOO MUCH ALCOHOL?

There are numerous signs of excess, most of which are obvious. Some people are very skilled at hiding the fact that they've consumed too much, so it's important that you be observant, not only with those who have been at the bar all night, but also with those who may come into your premises later in the evening. A person who has consumed too much alcohol usually shows some signs. Below are some examples, they should not be considered in isolation but as part of a global vision of an individual's behavior.

The Client:

- ☞ Frequently repeats statements.
- ☞ Has difficulty speaking.
- ☞ It has glassy eyes.
- ☞ Has difficulty picking up change.
- ☞ Swings side-to-side or front to back slightly.
- ☞ He has notable variations in the volume of his voice.

- ☞ Becomes antagonistic or argumentative.
- ☞ Starts using abusive or "mean" language.
- ☞ Becomes friendlier with strangers, wants to get into the conversation or buy a drink.
- ☞ Tripping over people and/or furniture.
- ☞ Suddenly becomes unusually calm, (Likely to fall asleep).
- ☞ He begins to boast about his financial situation, "conquests", strength, etc.
- ☞ Starts annoying other customers.

SOME BENEFITS OF ALCOHOL FOR SOCIETY

1. Alcohol in many countries is a very important part of the social scene, in most cases it is used sensibly to break inhibitions and helps to create a relaxed atmosphere.
2. Often the areas that are used for alcohol consumption are the coordination or social meeting places for communities, for example, the traditional British pub. In other countries, nightclubs, social clubs, cafes, bars, dance halls, discotheques, etc. (see Module 5) often offer other services such as food and entertainment.
3. Alcohol brings huge amounts of money to governments in the form of various taxes, such as excise taxes and sales tax, in addition to various other taxes related to the employment of personnel working directly or indirectly in the beverage industry.
4. The 'beverage industry' offers a massive number of jobs for a wide range of industries, for example:
 - a. Those used in the cultivation of basic materials such as grapes, barley, sugar cane, etc.
 - b. Those who transform raw materials, beer makers, distillers, wine makers, blenders, etc.
 - c. There are hundreds of companies dedicated to manufacturing the equipment needed to produce, package, promote, distribute, and sell alcohol. For example, manufacturers of equipment such as those who make fermentation vessels, stills, presses, tractors, bottling equipment, containers, bottles (glass and plastic), boxes (cardboard, plastic, wood), glassware such as glasses, jugs, pitchers, etc., labels and other elements necessary for packaging.
 - d. There are many people who work in the distribution of alcohol to all parts of the world, the truck drivers, the port workers, the seafarers, the railroad workers, the warehousemen, the vendors, in addition to the countless jobs involved in the administration of all the paperwork, the customs, the wages, the accounts, the file controllers, the list is endless.

5. It has been established that moderate amounts of alcohol can be beneficial to health. It stimulates appetite and aids recovery in the hospital.
6. Alcohol is used to enhance the flavor of many classic food dishes, this applies especially to wines, some spirits, brandy, and various folk spirits.
7. Many alcohol-based products, especially liquors, are used to aid digestion after eating.

These are just a few examples of how important alcohol is to today's society and if consumed in moderation it can be beneficial to modern life. Fortunately, since we don't know everyone who consumes alcohol, do so in moderation. The minority poses problems for society, in the form of alcohol abuse and all the problems related to violence, traffic accidents, vandalism, family problems and in general misconduct for those who have fallen into alcohol. There are many agencies that can be contacted confidentially to help, probably the best known is Alcoholics Anonymous (AA), which is almost all over the world. However, most countries will have other aid agencies, often directed to local health boards or volunteer boards.

The decision as to whether alcohol is of benefit to society is yours of course, all we want to say is that moderation is probably better than bad, it would be impossible to ban it worldwide, what is required is a much better understanding.

MODULE 4

EQUIPMENT/ GLASSWARE/ MACHINERY

The expected outcome of learning this module is that the participant:

- ✔ You will have a good understanding of the types of equipment found in a good standard bar.
- ✔ Understand the use of each piece of this equipment.
- ✔ You will have a good knowledge of a wide range of glassware in a good standard bar.
- ✔ You will understand what types of glasses are used for various drinks.
- ✔ You will recognize the fixed machinery that is used in your bar.
- ✔ Understand the need for cleaning and maintenance of all equipment and fixed machinery.

INTRODUCTION

Equipment can vary from bar to bar and bartender to bartender. The sale of one bar may require a large amount of equipment while another bar may require only simple and limited equipment. You will find listed below a complete list of the equipment and tools found in a bar along with details of how to use each piece.

COCKTAIL SHAKER

There are two basic styles of cocktail shakers,

- a) The BOSTON shaker is sometimes called an American shaker.
- b) The STANDARD shaker, or three-piece shaker.
- c)

The BOSTON shaker is made in two parts in the shape of a cone, in some cases, both parts are made of metal and glass and sometimes only one part is made of metal and the other of glass. These cocktail shakers are recommended by most top bartenders, as the movement of the mixture is longer it cools and mixes the ingredients faster.

It is necessary to use a worm (caterpillar) strainer for this type of shaker to separate the liquid from the ice, we will see the strainer later. The STANDARD shaker is almost always made only of metal and is built in three parts: the central part contains a strainer. This type of shaker, if used with the built-in filter, tends to have a slower fall and for this reason, many bartenders remove the two tops together and use the part of the glass with a separate strainer. It is doubtful, however, whether it is the fact of saving time and the use of the integrated or separate filter is something of individual preference. Shakers are used to

Prepare beverages containing fruit juices and/or dairy products (see Module 6) where vigorous shaking is required.

Take a look around your own bar:

How many cocktail shakers do you have?

What type are these?

THE MIXING CUP

The mixing cup comes in many shapes and sizes. The types most used by bartenders are straight on both sides with a pouring spout or with a narrower bottom and

with a pouring spout. It is necessary to use a strainer with these types of mixing glasses; Ball and long pitcher mixers, both usually have a pouring spout or a rim for ice retention; These styles are generally considered very bulky for use on the bar. Mixing cups are used for

prepare beverages that do not contain fruit juices and/or dairy products and are easy to mix (see Module 6).

What types of mixing glasses do you have in your bar?

What drink do you often make in your shaker cup?

THE SELANDER

This piece of equipment is used with the shaker and mixing cup as above. It keeps the ice in the mixing container and allows the liquid to seep into the glass without ice. The most used strainer is a flat disc with

a handle, the part of the disc has many holes for the liquid to flow through, it also has a spiral coil that surrounds the disc that is compressed to be used in

the shakers and mixing glasses of different sizes.

A two- and four-terminal strainer design has recently been incorporated that adapt through the mouth of the shaker and the mixing cup, but the method of use is the same.

THE BAR SPOON

It is a long-handled spoon usually with a spiral stem. It is used to stir ingredients in a mixing glass or to mix the ingredients of a direct drink (see module 6). A spoon model has a flat disc at the opposite end of the spoon and is used as a muddler (macerator) to crush the mint or sugar needed for some of the recipes.

THE BLENDER

This equipment is similar in design to a food blender, but with additional tempered steel blades for crushing the ice. It is recommended when

If you are using this piece of equipment to use crushed ice instead of ice cubes, this will help you get the desired "sorbet" effect with some drinks prepared in a blender. The blender base contains a high-power electric motor as well as an on-switch

/off which usually has a speed regulator. The blender cup can be glass, plastic, or stainless steel. The blender is not a substitute for the shaker, we use it to produce fruit drinks that require pureed or "sorbet" style drinks (see module 6).

Name a few drinks prepared in a blender.

THE ELECTRIC BEVERAGE MIXER

This piece of equipment is not yet found in most bars, its main use is for the preparation of milk shakes and drinks of similar styles. Some bartenders however use it as a substitute for the shaker, but most bartenders might think that this detracts from the style and mystique of the shaker. If ice is used in the preparation of drinks in this equipment it must be crushed ice, ice cubes can damage the blades.

LIQUOR MEASURES

In some countries, it is a legal requirement that measures be used to dispense

Alcohol. Several types are available and are made from a variety of materials, usually metal or glass. There are simple hand measurements of many shapes and there are optical measurements that fit on the neck of a bottle upside down. Size sizes depend on requirements

of each country. In some countries, standard size is required throughout the country, in others, the local authority decides the size and can often vary with the different styles of bar.

Is it a legal requirement in your country to use measuring devices in your bar?

YES

NO

If so, what is the legal measure in your bar for liquor?

Does this differ from other bars in your area?

YES

NO

ICE CRUSHERS

Ice crushers can range from a simple handheld crusher for very small quantities to a countertop model with a handle for manual activation to a large electric model the size of an ice maker with many shapes and sizes in between. The volume of crushed ice required by the establishment would determine the type of machine that is needed.

What is the type of drink that is made by pouring alcohol over crushed ice?

JUICE SHAKERS

Like the ice crusher, this piece of equipment can be a simple hand press or an expensive piece of electrical machinery. In many bars, the

bartender can get a

Fresh juices from the kitchen, where they have special juicing equipment, can now be obtained commercially, although it is advisable to keep a small juicer available for customers who prefer freshly squeezed juices.

GLASSWARE

This is probably more individual in each bar than the teams. The standard, quality, and variety of glassware you have in your bar is primarily determined by the style of the bar. Regular everyday glassware is found in some bars and the best quality, expensive crystal glasses can be found in the higher-end establishments. A general guide to the requirements of a standard bar would be as follows:

- ☞ Liquor glasses - cordials
- ☞ Glasses of sherry and port
- ☞ Champagne glasses - flute

- ☞ Wine glasses of various sizes and shapes
- ☞ Old fashioned glasses
- ☞ High ball glasses - collins
- ☞ Beer glasses - pilsner
- ☞ Balloon cup
- ☞ Cocktail glass – Martini
- ☞ Margarita glass
- ☞ Shot
- ☞ Chop – beer mug

Some bars also have special glasses for a special house cocktail. It could also be that when the draft beer is served the glass is marked with a line to show the amount determined by law, this also applies in some countries to wine glasses and others.

The above glassware listing would cover the needs of most bars.

It may be that your bar does not use glasses from the list, but of another type, if so make an outline of them and their uses.

GLASSWARE

Beer mug

Beer tumbler

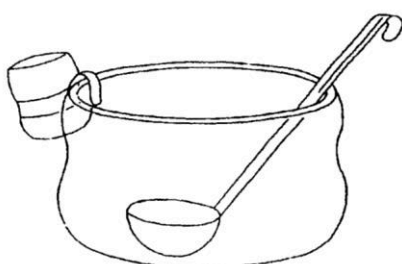

Old fashioned glass

White wine glass

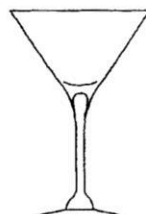

Red wine glass

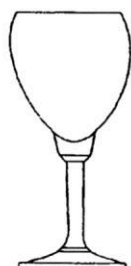

Cup or bowl

Cocktail glasses

Double cocktail glass

Irish coffee glass

Pimm's mug

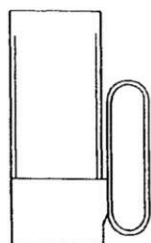

Highball glass

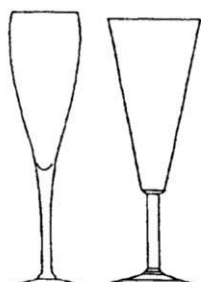

Brandy balloon

Brandy snifter

Hot drink glass with holder

Champagne flutes

Champagne cup
Liqueur glass

Port glass

Sherry copitas

The pieces of equipment mentioned so far are the main ones found in most bars around the world, however many other small parts are found in most bars and as said at the beginning of this module, they vary depending on the needs of each bar. Here is a list of other pieces of equipment found in a bar:

Can you think of any other pieces of equipment that you have in your bar? If there is, make a list of them.

FIXED MACHINERY

This section covers ice makers, refrigerators, cool shelves, cold storage, glass washers, and coffee machines. The range of equipment that is available worldwide is so extensive that it would be impossible to give even a representative sample.

Ice machine

Therefore, you should ask your supervisor to instruct you in the use and maintenance of all fixed machinery installed in the bar. You may find the list of this machinery along with cleaning and maintenance useful.

NOTES:

MODULE 5

TYPES OF BARS

The expected learning in this module is that the participant:

- ☐ Have a good understanding of the types of bars around the world
- ☐ Know the function of each type of bar
- ☐ Know what category your workplace is
- ☐ Name the bars in your locality that fit within the specific groups

THE COCKTAIL BAR – COCKTAIL BAR

The bar is probably the most difficult to define, as they vary greatly from country to country, however, all cocktail bars offer a wide range of drinks, including cocktails and mixed drinks. They usually have a wide range of different brands, and they certainly offer a better quality of service, including better table service. Some offer beer, including in some cases draft beer. Some offer non-alcoholic hot beverages, such as tea or coffee. The staff

you will work under the direction of a Bar Manager or Head bartender. The bar would be of a fixed style, like the bar machinery, it would have permanent plumbing, the decoration and accessories would be at a high level. The prices in this type of bar would normally be a little higher.

BAR DESPACHADOR (SERVICIO) – THE DISPENSE BAR – SERVICE BAR

The main function of the dispensing bar is to serve customers through a third person, for example, a waiter or waitress. In most cases, the dispenser bar is out of public view, although it is not in all cases. Most service bars serve a wide range of drinks, including bottled wine, in fact, this is the main function in handling this

restaurant and is an extension of the winery management. The bar is fixed like machinery and the pipes are like in a cocktail bar.

However, it is normally out of public view, the decoration would not have to be of such a high standard. Normally cash is not handled, the management of business is controlled by a computerized system.

TEMPORARY FUNCTIONAL BAR – MOBILE BAR - FUNCTION BAR

These types of bars are not permanent but temporary, trestle tables covered with tablecloths, their purpose is, then, to meet the different demands in different types of functions, for example, conferences and dinner dance. It offers a fast and flexible style of services for short but very busy periods. Obviously, fixed machines or pipes are not possible in order to allow greater flexibility. Normally they can be assembled quickly and just as quickly

They can be disassembled and can be produced in any shape or size to suit the required function. It is evident that this type of operation restricts the type of drinks that are possible to serve and for this reason, many establishments have a fixed function bar that can be fully equipped and connected and can store a greater variety of brands in it and therefore can offer a better selection of drinks. Another alternative is mobile bars that can be moved, for example, to a small conference room, drinks that are served for a certain period and that can be on wheels, this is a very popular alternative, if space is scarce.

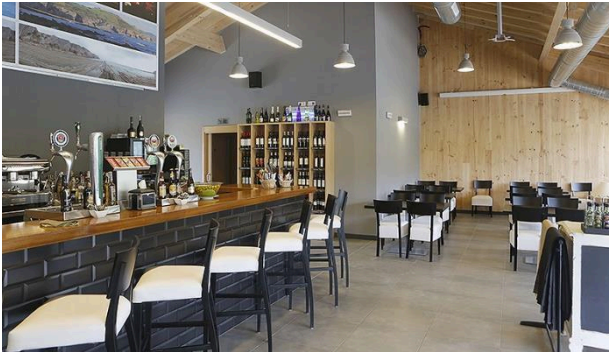

THE WINE BAR – WINE BAR

A wine bar usually only offers wine and wine-related products, although some also offer beer. Liquors, spirits and cocktails are not offered. This bar also usually functions as a restaurant / snack bar and they offer a wide variety of hot and cold meals and in some cases the drink service is secondary, the main volume of business is to serve food, although in a simpler way

than a restaurant. A fixed bar with fixed machinery and pipes are normally found in this type of establishment.

THE BAR-RESTAURANT

A bar-restaurant, at a good restaurant level, can be a cocktail bar, with the difference that they do not serve "only drinks" to the public, they will be served only to customers who use the restaurant service. In some cases, especially in small bar-restaurant establishments, in addition to serving customers directly at the bar, they also work

like a service bar of the restaurant's waiters. That bar is permanent with fixed machinery and pipes like in a cocktail bar. It is usually seen right at the entrance of the establishment and the area is often used as a reception area.

EL BAR PÚBLICO – PUBLIC BAR – PUB

The public bar is open as the name suggests to the public, it normally offers a wide range of beers and spirits usually with a limited selection of brands, it rarely offers cocktails or mixed drinks; Table service is limited or non-existent and snacks such as chips and nuts are often offered, although these may be available in the form of combos at an additional cost.

Food and snacks are generally available. The bar is fixed with fixed machines and pipes.

EL CAFÉ BAR – COFFEE BAR

Found only in a few countries, they typically offer a reasonably good selection of fast food and only a limited number of drinks, are popular as hangouts in rural areas, and are popular with travelers. They are normally family-run, with the family often living on the premises.

BAR DE PISCINA – POOL BAR

Pool bars are located in a pool area and can be inside or outside of it, some are located inside the pool itself with swimming patrons able to stand or sit on submerged stools. You won't find glass cups or glasses at this type of bar due to the barefoot hazards of broken glass, drinks are often served in disposable plastic containers, or colorful acrylic or polycarbonate cups.

Some pool bars also provide simple snacks. The range of drinks is often limited, mainly because customers only want to have a refreshing drink and not too much alcohol. Opening hours are often based on weather conditions and are not generally open during the evening hours.

BAR DE PLAYA – BEACH BAR

Most of the pool bar conditions (above) are also applicable to the beach bars, with the difference that the bar is located above the beach area. Such establishments often provide a simple restaurant service or refreshment service to those customers who do not want to

Leave the beach area to eat.

BAR DE PIANO – PIANO BAR

The term Piano Bar is usually used to any style of bar that offers a pianist show. In large cities, they also try to be a cocktail bar but this is not necessarily a requirement. In the smallest, most intimate part of the bar the piano music is just background, the mood that nature establishes, but sometimes the piano music can be almost cabaret style, often with one or more singers and even in some cases with patrons being encouraged to participate in a kind of "KARAOKE".

IDENTITY ASSESSMENT TASKS AND QUESTIONS

In what category do you think your bar fits from the one we have looked at?

Is your bar different from the description given? Say what the difference is if it is and describe your bar in your own words.

Can you think of a bar in your locality that fits into the category of a restaurant bar, but is also a cocktail bar and that also takes one to distribute the operation? If so, name it.

Do you have coffee bars in your country? If so, name one.

Can you think of a bar category that is not listed but is found in your country? List it if so and give a brief description of how it is different from those listed.

Write down the names of several bars in your area that fit into the above categories, make a note of none that vary and tell the differences.

Write a short description of one of your own favorite bars, put it in one of the particular categories, and say what it is that you want about it.

The above questions and assignments are for your own personal assessment to ensure that you understand the module. If you are satisfied, then/then go to 6 module. If not, repeat your module and try the questions and assignments again.

Notes

MODULE 6

CLASSIFICATION OF MIXED DRINKS

The expected learning outcome of this module is that the participant: -

- ✔ You will know the general classification of mixed drinks.
- ✔ List the main categories of mixed drinks.
- ✔ Define each category/type of cocktail.
- ✔ Identify popular beverages in each category.
- ✔ Identify the different methods of preparing mixed drinks.
- ✔ Identify the equipment and glassware needed for the different types of mixed beverages.
- ✔ Understand the reasons for different methods of preparing mixed drinks.
- ✔ List the main points to take into account for the selection and preparation of garnishes and decorations.
- ✔ Understand the terminology used in preparing and serving mixed drinks.

The main styles of mixing drinks are as follows:-

- (A) The short cocktail (a maximum of 10 cl.)
- (B) The medium cocktail (approx. 20 cl.)
- (C) The long drink (approx. 30cl. or more.)

THE SHORT COCKTAIL

Let's look at the short cocktail, this can be subdivided into:

- (I) Aperitif – Pre dinner.
- (II) Digestive – After dinner

Normally, the cocktail (I) aperitif is dry and in the preparation of cocktails you will find a little bit of everything, aperitifs based on wine, spirits, liqueurs and fruit juices. Dairy products (milk, cream) are generally excluded from this group.

The digestive cocktail (II) is usually sweet and often contains a dairy product such as cream. In some countries, cocktails containing cream are served in a double cocktail glass.

Drinks in these groups can be prepared by a variety of methods, in a shaker (shake), in a mixing glass (shaken or blended), or even in an electric blender (blended). If the ingredients mix easily, i.e. they do not contain fruit juices or dairy products such as cream or milk and can be shaken in the mixing glass with ice and placed in the cocktail glass.

If the mixture contains a fruit juice or dairy product or contains a product that is difficult to mix, such as egg white or yolk, then it should be shaken in a shaker with ice and placed in the cocktail glass.

If fresh fruit is used or if it is a style of drink that requires "sorbet", you should use a blender. Mix the ingredients with crushed ice and pour without forcing into a cocktail glass, however, it is unusual for a short cocktail to be made by this method because the fruit and crushed ice along with the liquid ingredients combine to make a larger lump than what a cocktail glass can hold.

Another method of mixing is to prepare the drink in the glass to be served. We call this DIRECT 'build' a drink (built), but as it is not usual for a small cocktail to be made by this method, as ice is required to cool the glass, the ingredients in turn make a lump larger than a cocktail glass.

Let's do a little exercise in reconnaissance of cocktail groups. Let's give an example of a classic cocktail in each group analyzed so far. Name of two from each group.

(I) Aperitif - Dry Martini.

(II) Digestive - Brandy Alexander.

Now we will look at the second style of a prepared drink.

THE MEDIUM DRINK (APPROX. 20 CL.).

There are many mixed drinks that are consumed at any time of the day or night. These are often served in sized wine glasses (or champagne flutes if made with champagne) and many are served in an old-fashioned glass or small glass. Most champagne-based cocktails fit into this category as they will be drunk as bitter, although both are often as appetizers as well. Another drink that fits into this category but is also drunk as an aperitif is Negroni. Can you think of two? Name them.

It is at this stage that another method of making a mixed drink can be introduced. This is by preparing (or building) the drink directly into the glass in which it is to be served. Many medium and long drinks are made using this method. This is a quick and easy way to prepare a drink and practically eliminates the possibility of serving more or less measure (putting too much or too little to fill the glass). Some drinks combine two preparation methods, a portion of the drink can be whipped, poured into a glass and then another ingredient such as soda is added to fill the glass, this is called "topping up" and the additional ingredient is usually "stirred" gently with a bar spoon. Can you name a medium-sized drink that is fully constructed and made by another method, and then completed?

Our third and final drink style is:-

THE LONG DRINK (ABOUT 30 CL. OR MORE).

These are the thirst-quenching types, which can be served in a variety of cup shapes, but high ball is the most commonly used. They can be prepared by any of the recognized methods and many of them are built. These drinks are often low in alcohol and can even be non-alcoholic, usually containing a high proportion of fruit juices and/or carbonated minerals. Long shots are often embellished and adorned in a more exotic way than other styles of blending that is very fanciful. Almost all of them are served with the sorbet through which it should be drunk.

Can you name two long gulps that shake? Now see if you can name two that are built.

ORNAMENTS – GARNISH

There is a clear difference between 'garnishing' a cocktail and its 'decoration'. The term garnish refers to edible fruit or vegetable that is used as a complement to the drink, usually either complement the flavor of the drink or the color contrast, sometimes it can do both. An example of a garnish that complements the flavor of the drink and also contrasts its color is a celery stalk in a Bloody Mary. An example of an ornament, which complements the flavor is the

orange slice in a Negroni. A thin strip of citrus peel like pith with as little as possible is squeezed further into the drink to extract the natural essential oil contained in the skin (it is strong in flavor and adds to the flavor of the drink). This is sometimes referred to as a "twist".

Another way to garnish the drink with an edible substance is to "frost" or "rim" the glass. This is done by moistening the rim of the glass with a small piece of fruit and dipping the rim in the frosting substance, this could be sugar, salt, coffee powder, chocolate powder, chocolate threads and many other edible substances. It is worth noting that in I.B.A. in all competitions the ornament must be edible.

DECORATION

The decoration of the drink is not edible and is added to enhance the presentation, for example, a fancy or stirring stick, the sorbet, and even in some cases, plastic animals or umbrellas. While it is common to use chopsticks, straws and stirrers to decorate a drink, the practice of plastic animals and umbrellas is not widespread and is often used in a specialty drink. In I.B.A. competitions, only supplies of chopsticks, stirrers and straws can be used. The selection of stirrers and straw should be consistent with

The color of the cocktail, a bright yellow sorbet will help decorate a white drink, otherwise a white sorbet will be lost in the white drink and vice versa. What you use to both garnish and decorate a drink, remember that you should not distract us from the most important thing, which is the quality of the drink itself, never sell a drink only in the quality

of decorating and embellishing and never making a drink look like a colorful fruit salad.

Can you name two examples of the drinks that are complemented by its garnish?

GLASSWARE (see also module 4)

Glasses vary in shape and size from country to country and even from bar to bar, some bars have special glasses for a house drink or special mix, if the bar has a glass that has a drawing and the name of the drink is written, plus its recipe and method of preparation, for it would be considered to have them together with their adornment and decoration. Some shapes and sizes of glassware are classic, and each glass shape has a specific use. On the next page, you will find drawings of such glass objects. Study them and then complete the following tasks: -

TASKS.

Put the name of the corresponding glassware in front of each cocktail.

Manhattan _____
Whiskey sour _____
Brandy Alexander _____
_____ Bucks
Fizz _____
Gin Fizz _____
Rob Roy _____
B&B _____
French Connection _____
Kir _____
White Russian _____
Tequila Sunrise _____

Golden Dream _____

The questions and tasks included in the text of this module are for self-assessment. Review your answers, if you are satisfied then move on to module 7. If not, repeat this module and try again.

NOTES:

[illegible]

MODULE 7a PRODUCT CLASSIFICATION

The learning outcome that the participant is expected to: -

- ☐ Know a general classification of products that are usually available on the international market.
- ☐ List the main categories into which beverages are classified.
- ☐ Give a definition or description of each category in (a).
- ☐ Classify the types of products that could be included in the categories in (a) and (b).
- ☐ Briefly describe the raw materials used to make each type of product.
- ☐ Compare the alcohol content of each category, as the case may be.
- ☐ Identify the country of origin, in each case.
- ☐ Identify the region or district of origin - AOC/ DOC
- ☐ Briefly describe the main characteristics of each product.

GENERAL OBSERVATIONS

The method and criteria used to classify products may vary slightly from country to country, and we must accept that there will always be arguments as to which product should be in this or that category, however, for the purpose of this program we have endeavored to keep classification as simple as possible.

Any questions about a test paper set up by the IBA EDC are based on the information they have received as part of the Induction Program.

As our goal, we have avoided using brand names as much as possible, however, in some cases they had to be used.

BEVERAGE CLASSIFICATION

The first step is to classify "DRINKS" into just two sections:

ALCOHOLIC

For drinks that contain alcohol, the amount of alcohol can range from 0.01% to about 55% or more.

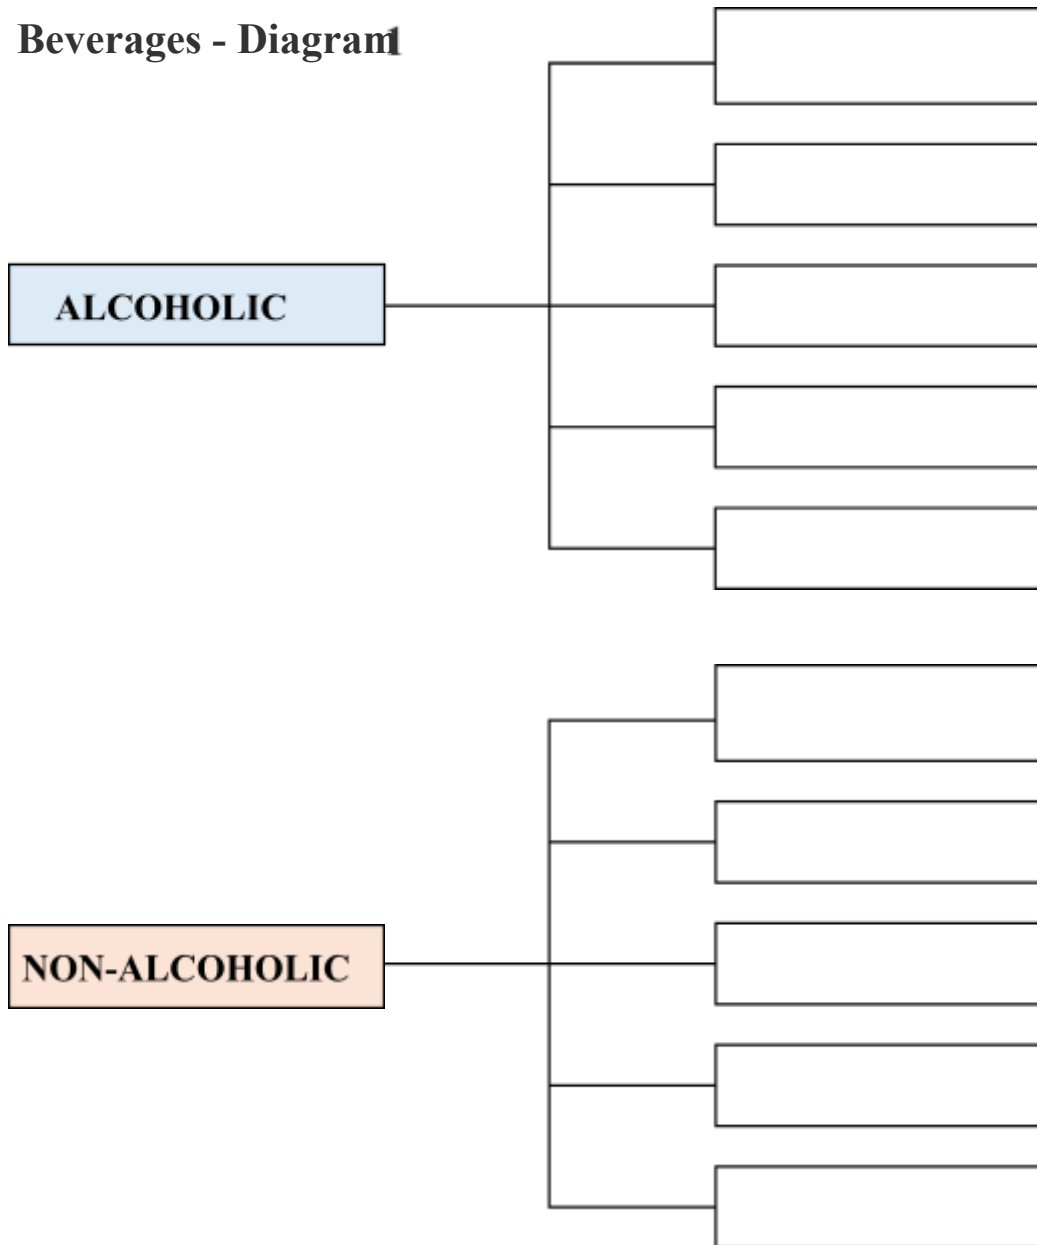

NON-ALCOHOLIC

Those drinks that do not contain alcohol. There are several categories of non-alcoholic beverages, which we will discover later in this module.

So now we have the beginnings of our classification, and it looks like this (see Diagram. 1). As we move forward, we will see how this table expands in order to take into account the wide range of products that are on the market. Obviously, we won't be able to include all the beverages produced in the world,

But by the end of this module, you should at least be able to adjust your local products in the overall rankings.

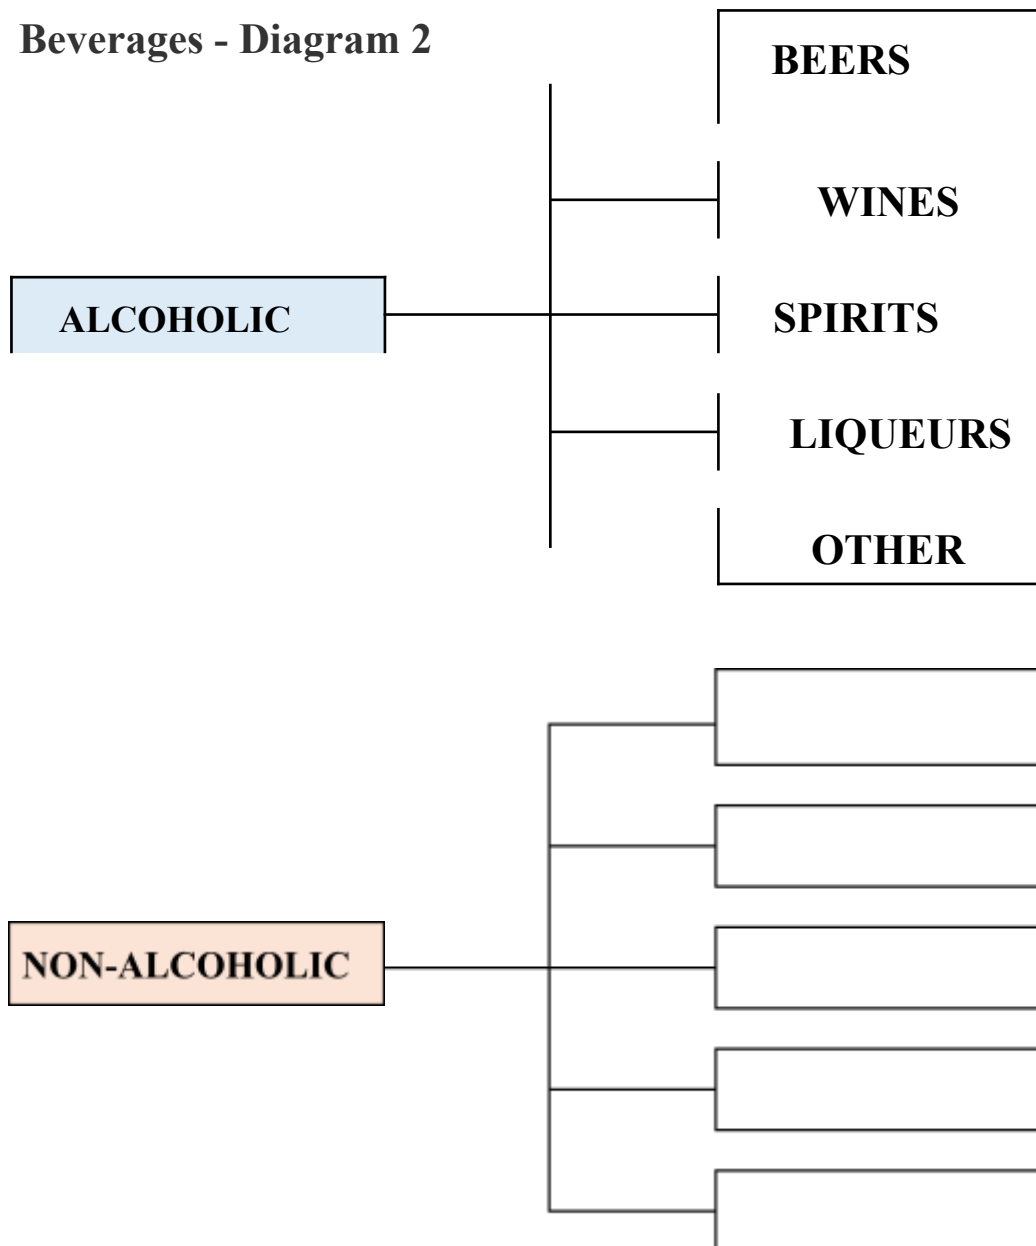

Beverages - Diagram

Let's now look at some very broad categories of alcoholic beverages, so we will have 5 categories, and they are: **a) BEERS b) WINES c) SPIRITS- SPIRITS d) LIQUORS.**

Another category that includes beverages/products that cannot be placed in the 4 categories a, b, c, d. Let's call this category **e) MISCELLANEOUS OR OTHERS.** Now we have a leaderboard that looks like this.

Beverages - Diagram 2

Before we go any further, let's clarify what we mean by the categories of alcoholic beverages we've created so far.

BEERS

One definition of beer is that it is "an alcoholic beverage made from water and a base of cereals, the starch of which has been converted into sugars by the action of an enzyme called diastase, the result is then hoppy flavored and then fermented with yeast to produce the beer.

The alcohol content of beer varies from about 1% to 14% for very strong beers.

We'll give you more information about beers later.

WINE

a wine is produced.

Wine can be made from many fruits and vegetables, for example wine is made from elderberries, blackberries, plums, carrots, parsley, potatoes, rhubarb and many more. Many people who make wine at home either from fresh fruit or prepared kits. Basically, all that is needed is moisture, sugar, and yeast, when mixed at a proper temperature and with a certain amount of time in mind

However, when wine is mentioned in this program, we are referring to wine made from grapes and those newly gathered in it!

There is an internationally accepted definition for the term wine, which is as follows.

"WINE IS THE ALCOHOLIC BEVERAGE OBTAINED FROM THE FERMENTATION OF THE JUICE OF FRESHLY PICKED GRAPES, FERMENTATION THAT HAS BEEN CARRIED THROUGH IN THE DISTRICT OF ITS ORIGIN, ACCORDING TO LOCAL TRADITION AND PRACTICE."

The alcoholic strength of wines in this way is usually less than 16% alcohol. This is because the yeasts in the wine usually can't survive on anything stronger than around 16%.

Some 'wines' are stronger, this is achieved by adding alcohol/spirit, as we will see later in the FORTIFIED (reinforced) and FLAVOURED wines section.

SPIRITS – SPIRITS

In simple terms, spirits are a type of alcohol concentration, achieved by separating alcohol from water and other chemicals in the base material. As we have said before wine is rarely stronger than 16% alcohol, by removing water and other things from the wine the strength/ratio of alcohol increases, thus producing a spirit (brandy). It is evident that if all the water and other chemicals were removed you would get pure ethyl alcohol or ethanol.

For the spirit to retain a certain character it is normally not distilled to 100% alcohol, as there would be nothing left in the spirit to give flavor. In some cases fairly pure alcohol is needed, for example, in the case of vodka and gin, since both products are manufactured from NEUTRAL ALCOHOL, the most neutral, the best. The strength of the distillate, therefore, depends on the type of spirit being produced. All spirits are produced under some form of governmental control, which can determine what the maximum and minimum ALCOHOLIC strength is.

Task:

Find out if there is a MAXIMUM ALCOHOL CONTENT of spirits in your country, if so what is it?

I

Like other major categories, LIQUEURS cover a very wide range of products, which we will deal with in detail later. However, for our purpose a liqueur is defined as "A product made from SPIRIT that is sweetened usually with sugar or honey, flavor and color, possibly".

The force varies considerably from a minimum of 15% to 55% or higher.

OTHER PRODUCTS / VARIOUS

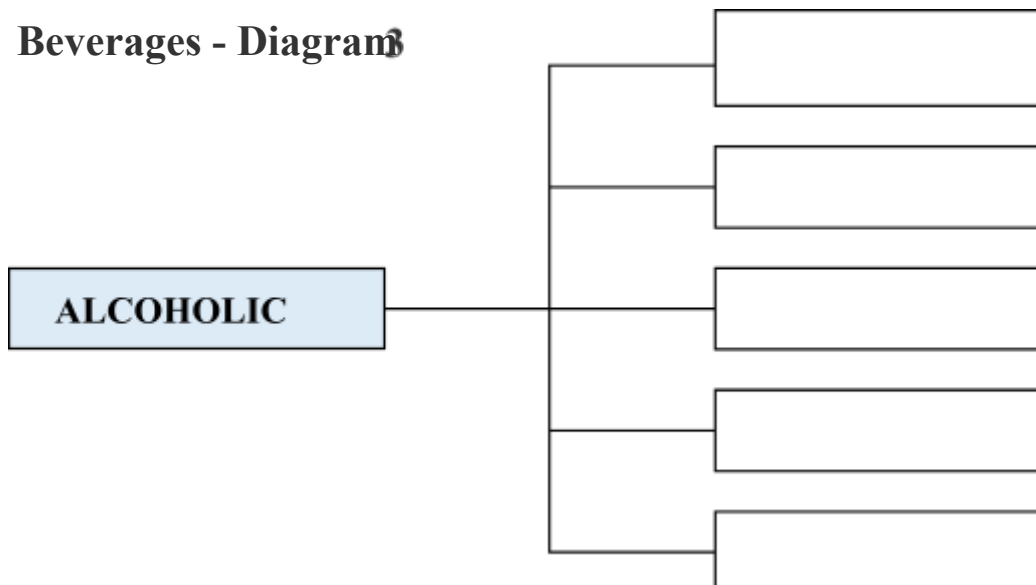

This category contains all the other products that do not fit into the last 4 categories or about which there are some reasonable doubts, i.e. their contents are varied and often very different.

Products such as cider, glasses and others will be included and described later.

Just a reminder to yourself about our diagram so far: - Fill in the blanks below.

Beverages - Diagram

1. The alcohol strength of beer ranges from % _____ and ____%.
2. Most natural wines are below _____% ALCOHOL
3. The name of the process that is used in order to obtain a spirit or brandy.

-
4. Name of the part of the equipment needed to produce a spirit.
-

5. The alcohol that is consumed is called _____ or _____

6. All beers need four basic ingredients, these are: -

a) _____
 b) _____

c) _____
 d) _____

7. List 3 points that you remember from the definition of wine.

a) _____
 b) _____

c) _____

8. Briefly explain what a liquor is.

9. It's a special enzyme that's needed to convert starches into sugars, say its name.

10. BEERS. Identify at least three brands of beer in your bar and list them as follows:

BEERS (EXCEPT craft)			
Brand	Alcohol content	Country of origin	Style / Color
1.			
2.			
3.			
4.			
5.			

11. WINES. Identify and research what you consider to be at least 6 different wines and complete:

WINES				
Wine Name	Alcohol content	Colour	Taste / Sweet / Med / Dry	Country of Origin
1.				
2.				
3.				
4.				
5.				
6.				
7.				

12. Spirits. Identify and research at least 6 bar products that qualify as spirits and complete the following chart.

SPIRITS					
Name of the AGUARDIENTE	Types, e.g. Whiskey, Rum	Alcohol content	Glassware in which it is served	Mixer	Country of origin
1.					
2.					
3.					
4.					
5.					
6.					
7.					

13. LIQUEURS. Identify in your bar what you consider to be 8 different liquors and complete the following chart. (Not all sections may be applicable)

LIQUEUR				
Liqueur Name	Alcohol Degree	Colour	Main taste	Country of Origin
1.				
2.				
3.				
4.				
5.				
6.				
7.				
8.				

After you've completed these little exercises that you must have discovered is a little more complicated than we think, there are a lot of other categories that you can create, and here's what we're going to look at in the next one.

There are literally thousands of different alcoholic beverages on the market today, some are available internationally the others are only available in limited areas, it is evident that it would be impossible to list and classify them all.

The aim of this section is to look at how the basic classifications we have just made can be expanded to give us more details. We are going to proceed in the same order as before.

BEER

Beer can be classified into several possible categories, but for this step we will examine just three. These three categories are ALES, LAGERS, and STOUTS.

Beer is a general classification that according to our definition above contains four basic ingredients, water (called liquor in the brewing industry), hops, barley (malted), yeast, however, as you may be aware there are many different styles, colors, strength, etc., available. These differences are reached by variations in raw materials, for example, different types/varieties of hops give different levels of bitterness, different yeasts give different characteristics. Other cereals added to malted barley give a lighter character to beer, etc. Also, there are slight differences in the way beer is made.

Here are some guidelines on how to distinguish the three types of beer:

ALES

In general, the color of beer is amber/brown to dark brown or almost black in some cases. They can be sold in a variety of containers, bottles, cans of different sizes, barrels, barrels and bulk tanks. Its alcohol content can vary depending on the brand, as well as the degree of bitterness.

Some well-known types of beer are the following:

Bitter, sweet, coffee, light, pale, strong, naturally conditioned.

LAGER

They tend to be lighter in color, light yellow, and are drunk at lower temperatures than beers. The ingredients used are different, especially yeast which takes longer to ferment and does so at a lower temperature. The word "lager" means

"For storage" - they are often matured longer than "ales". Most countries produce lagers, therefore there are many brands on the market, which go back to internationally recognized brands, to those made on a relatively small scale in the local brewing industry.

The strength varies from low graduation to the so-called 'special' which can be very powerful. Lager is also sold 'sugar-free' and are therefore popular with people who may be diabetic.

STOUTS

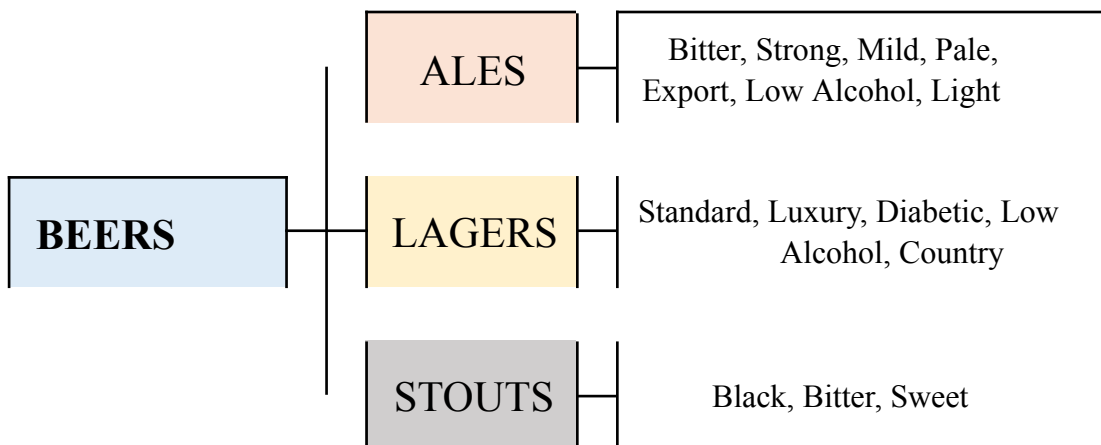

These are beers that are always dark in color and usually look "black." This is achieved by roasting the malt in an oven, some stouts are "heavy", but it can be sweet or bitter.

Each brewery could have its own style. Remember that there are many variations in each of the

These three categories are mostly beers. Our scheme has progressed to this one.

Alcoholic Beverages – Diagram 4 (Beers)

Some questions to think about and research.

1. How many brands of beer are in your bar?

2. What types are Ales, lagers, Stouts?

3. What countries do they come from?

4. What is its strength? - Are they standard or luxury?

5. What range of beers are produced in your country? List of some of the most important.

Beers (Local)			
brand	Alcohol content	Region of Origin	Type/Style
1.			
2.			
3.			
4.			
5.			

WINES

In general, the term wine can be divided into three generally available subcategories, namely:

FLAVORED FORTIFIED TABLETOP

Table wines are simply fermented grape juice made according to the definition we gave above.

A strong wine, as the name implies, a wine that has been strengthened/fortified at some point by the addition of alcohol, usually locally produced grape schnapps.

An aromatized wine, is a wine that has been fortified (fortified) with brandy, then flavored by infusing or macerating a variety of herbs, roots, barks, flowers, seeds, etc. There are numerous methods and recipes depending on the product. Our diagram now shows wine (Graph 5).

Alcoholic Beverages – Diagram 5

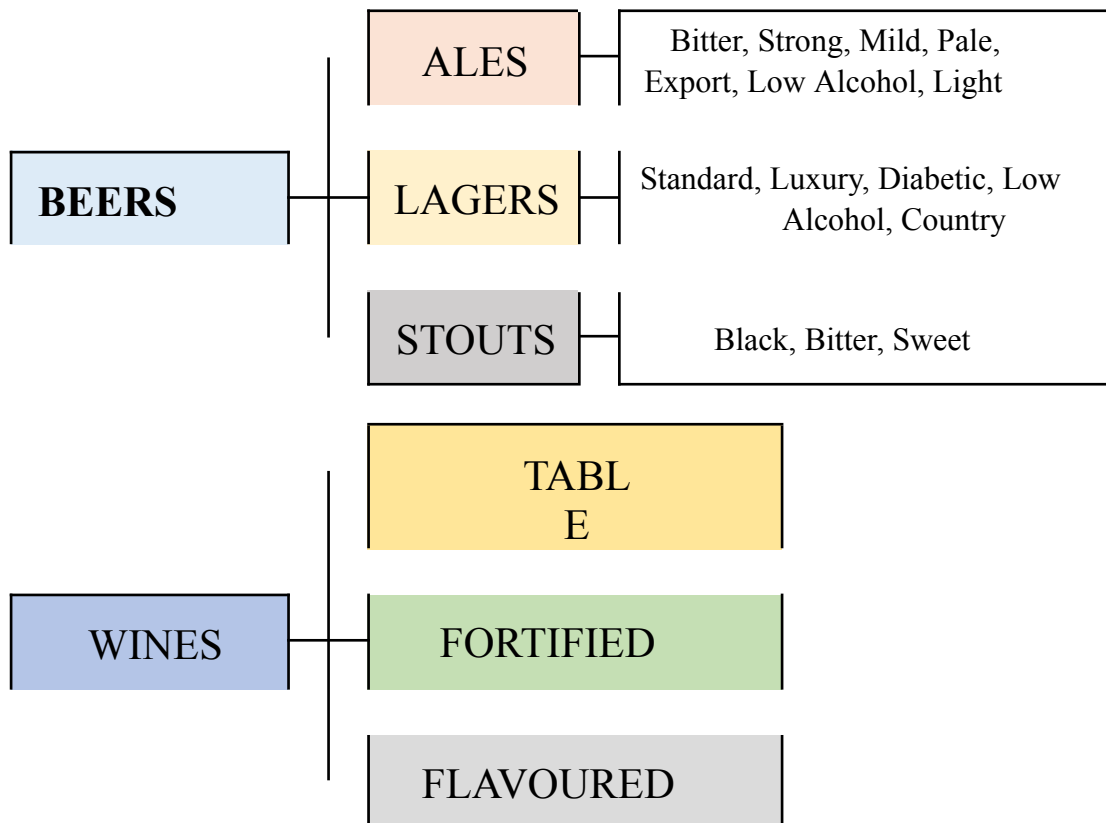

TABLE WINE

Let's now look at table wines in a little more detail. Remember that we said earlier that for the purposes of this program, wine means product made from freshly picked grapes.

How can table wines be further classified? In many ways, such as:

- (I) The grape variety used in its manufacture (there are literally hundreds of grape varieties)
- (II) The Countries.
- (III) The Region.
- (IV) District of origin.
- (V) Castle / state of the grapes in which they were grown.

They could be classified as follows:

(VI) Harvest or not harvest. Harvest simply means that the wine was made in a particular year. They are not mixed with wines produced in other years. This does not necessarily mean that it is old WINE or even good wine for that matter, because climatic conditions / vary each year.

(VII) To the degree of sweetness/dryness.

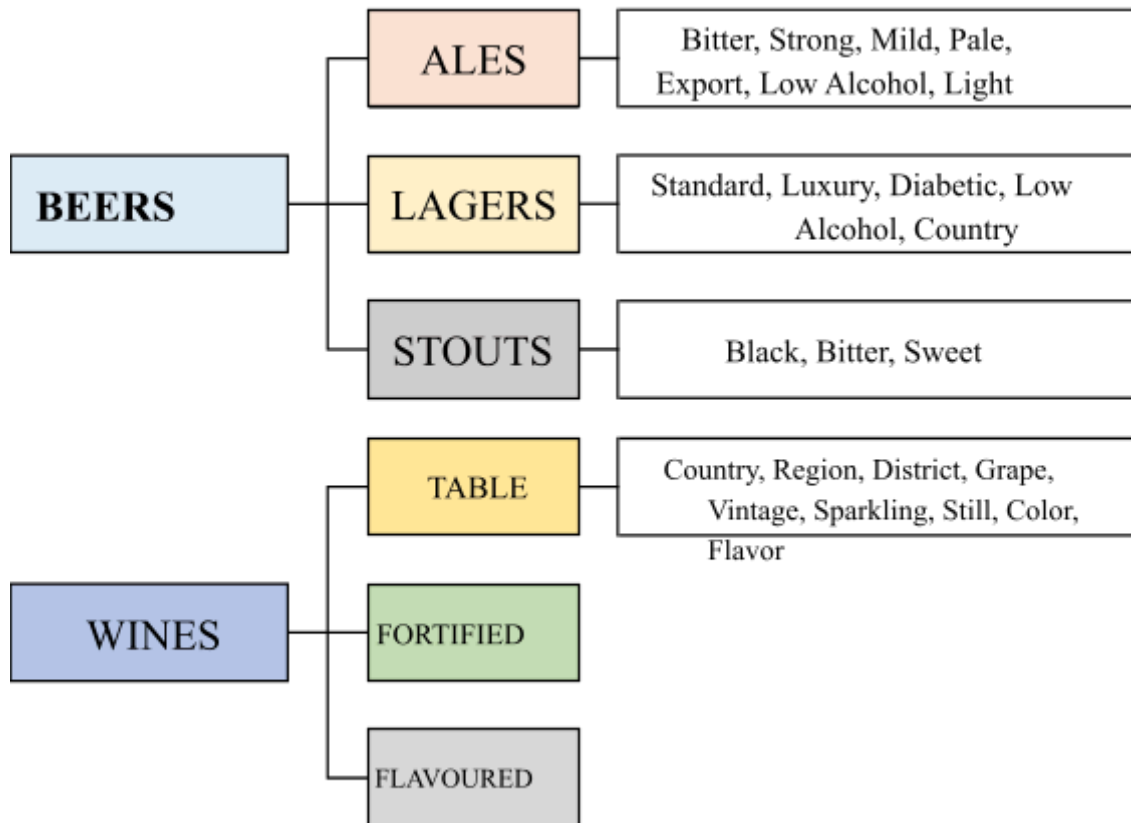

(VIII) Color - red ranging from deep pink to what appears to be black in the glass. White from almost colorless to deep yellow or pink, ranging from a very pale pink to an intense red almost light pink. All grape juice is colorless, the color in the wine is obtained by leaving the skin to remain in contact with the fermentation juice (MOSTO), for different periods of time depending on the grape variety, the year and, of course, the desired color. Thus, white wine can be made from red grapes simply by separating the must from the skins. (As in the case of champagne, which uses a high proportion of red/black grapes in its manufacture).

(IX) Another classification of table wines is, by their carbon dioxide content, whether the wine is still semi-sparkling or sparkling. Even sparkling wines can be classified as to what method was used to make them, ranging from simply slowly injecting carbon dioxide into cold wine, this is an inferior and cheap way to make sparkling wine and the very expensive, difficult and time-consuming Champenoise method. Winemaking methods and many other factors are discussed in greater detail in the Intermediate Course. We can see, then, that table wines are very varied, and it takes many years of study to have enough knowledge to speak with confidence. The range is incredible.

TABLE WINES AT A GLANCE

Many countries produce wine, but Europe typically produces about 75% of the world's wine. Six of the EEC countries produce 61% of the production are France, Italy, Portugal, Spain, Germany and Greece. Italy and France, between them, produce 50% of the world's production. Many countries in recent years have substantially increased their vineyard plantings, including the USA, Australia and some countries in South America. Now, therefore, they have further developed our scheme of having this aspect.

Alcoholic Beverages – Diagram 6

FORTIFIED WINE

As we have already outlined, a strong wine is wine that has been enhanced by the addition of alcohol in the form of grape brandy (in general). There are several types of fortified wines. The two most important are sherry and port, others include Madeira, Marsala and VINOS DULCES NATUREL.

Both Jerez and Porto are available in various styles that have been justified very early, but what are the basic differences between Jerez and Port? There are many.

1. Country of origin.

TRUE SHERRY originates from a small defined area of southern Spain around the town of Jerez de la Frontera, many countries produce a **STYLE OF SHERRY** or type of wine such as Australia, Cyprus, South Africa.

OPORTO comes from a delimited region of northern Portugal and like sherry many countries produce a style of Port wine, but true Port can only come from the area of Portugal.

2. Grape varieties used.

Both products are made with very different grape varieties or a combination of grape varieties, which will be discussed later in the refinement course.

3. Vinification.

(The way wine is made) In this area, there are many significant differences between port and sherry in particular at the fermentation stage. Sherry is left to ferment out, i.e. use all the sugar, then it is strengthened by giving a dry wine. While Port is fortified during fermentation, this fortification kills the yeasts and stops fermentation, resulting in a sweet wine.

The maturation and blending method also play an important role in producing a unique style of wine.

SHERRY

Jerez is always blended in a special system called the "solera system", which is a series of barrels. Port is not blended in the same way, there is therefore no sherry harvest (i.e. sherry from the 1-year production), while it may be the port harvest.

SHERRY STYLES

There are two main categories of sherry wine: Fino and Oloroso. Jerez fino are considered the best sherry wines that show their fine delicacy and finesse, which are always pale in color and dry on the palate. There are three styles of fino de Jerez.

☞ FINO: - pale, very dry and best served cold.

- ☞ MANZANILLA: - pale dried and says it has a hint of salty flavor (due to its ripening, near the coast), served cold.
- ☞ AMONTILLADO: - pale golden color, medium dry and says it has a nutty character.

OLOROSO sherry tends to be richer and sweeter, fuller-bodied and usually darker in color. They are often called OLOROSO, CREAM, BROWN. There are some new styles of sherry being promoted which are pale but sweet and are served on ice with blends, such as soda, lemonade or tonic.

Sherry is best served in a tulip-shaped glass called Copita in order to concentrate on the aroma.

PORT

There are several styles of port, ranging from pale white/white (appetizer) ports, harvest ports are very filling, sweet and quite expensive.

Popularity of ports can vary considerably from country to country, it is very popular in France and the UK and its worldwide acceptance and popularity is well known.

The best quality Tawny and Vintage ports are long-lived and are often bought by wine lovers and speculators as long-term investments.

PORT STYLES

Most port is sweet and can be blended or a ONE-YEAR-OLD port

MIXING PORTS

☞ APERITIF OR WHITE PORT

Pale white/green grape color is often of a drier style than other ports, the finest quality is the driest.

☞ RUBY ORDER

A young port matured in barrels for 4 years. It takes its name from the color of ruby, which is light and refreshing, although part sweet, sometimes drunk with ice, lemon wedges, and lemonade or soda water. It doesn't get much better with age in the bottle.

☞ OPORTO TAWNY

An older port that can take a long time to mature in barrel and therefore can be very expensive, should be drunk soon after opening. It takes on a reddish colour from barrel ageing and has great elegance, although it does not have the power of Oporto Vintage. It is usually taken as a drink after dinner.

☞ BATTERED PORTO

Not from a single year (vintage), but handled in a similar way to Vintage Port, which develops in the same way, called bark, as it sheds a bark or sediment like that of the vintage. This port is usually bottled after 4 years in barrels and left to mature in the bottle for 6 to 8 years before being drunk. It is like vintage and can be good value for money, but they do not usually match the excellence of Vintage.

☞ SINGLE YEAR PORT – VINTAGE PORT

Made only exceptionally in good years it is highly sought after and expensive. On average, a harvest is declared only 3 or 4 times per decade. Oporto Vintage is matured in barrels for 2 years and bottled. It requires about 10 to 15 years in bottle in proper storage conditions before it is at its best, depending on the harvest it can be even longer. It always produces heavy sediment as it matures. Vintage Port requires careful handling and must be decanted before serving. Decanting is the removal of clear wine from sediments. It is preferable to serve it at room temperature that has been gradually acquired, because the wine is brought to the room many hours before it is opened and decanted. This one doesn't hold up very well once opened, only a few days. It is best drunk from a wine glass in the shape of a clear tulip to savor the aroma. It is recommended to serve it after dinner.

☞ LATE VINTAGE BOTTLING

The wine of a good year that has been kept longer in the wood than the classic Vintage Port usually 4 to 6 years, which accelerates ripening. By this time a sediment had been thrown into the barrel. Once bottled, it will have little to no sediment, and it's ready to drink. Lighter in body than Vintage or Corteza, but with a good price. It is not always necessary to decant.

OTHER FORTIFIED WINES

MADEIRA One of the longest-lived wines and has an unusual taste. Available in 4 main styles, taking its name from the grape variety from which they are made.

- ☞ Sercial, considered the best of the dried Madeiras, is usually eaten as an appetizer a little cold. It varies in color from pale to golden, always dry, and has a potent aroma.
- ☞ Verdelho, sweeter and milder than Sercial, leaving a clean taste, is often served with broth or turtle soup.
- ☞ Bual, more complete and sweet than the previous two, is a dessert wine.
- ☞ Malvasia, exquisite wine, full-bodied, a wine for after dinner.

Madeira has a unique history and manufacturing method that will be covered in greater detail in the intermediate program.

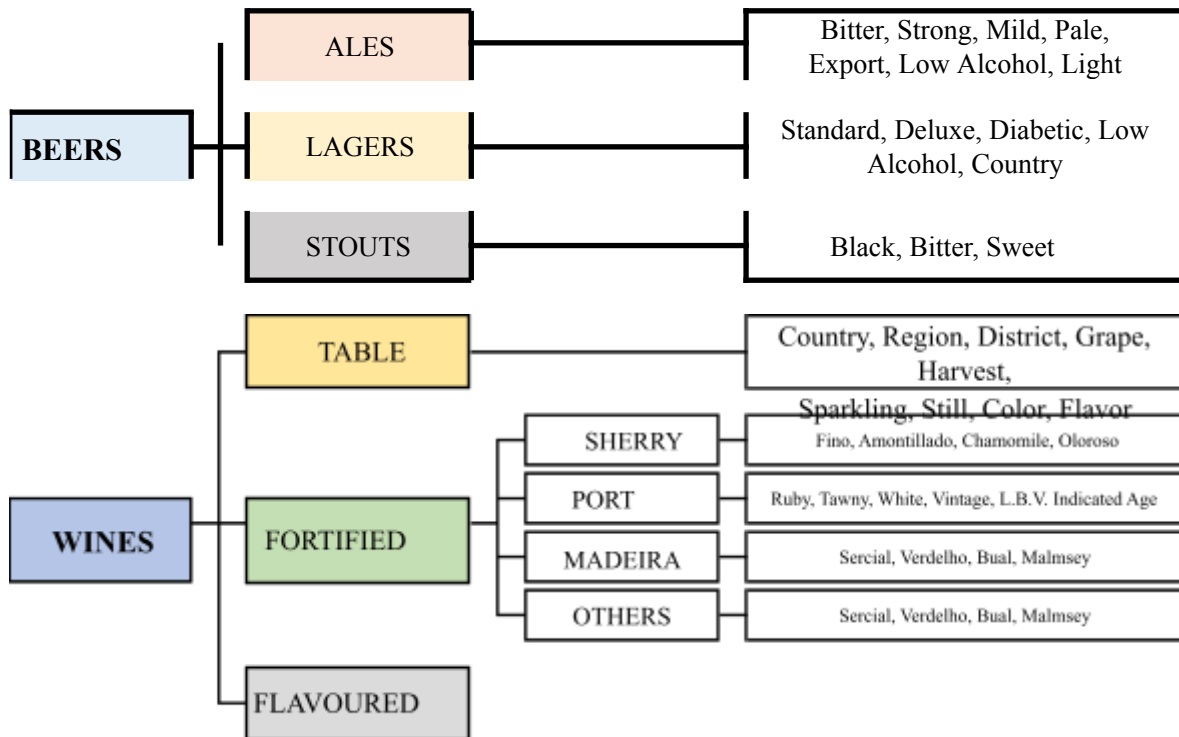

MARSALA One of the most important dessert wines found in Italy, produced in the city of Marsala in northwestern Sicily. It's dark, and has a burnt sugar flavor, sweet to the palate, not used much outside of Italy or the Italian community. It is also used in cooking to flavor sauces and sweet dishes.

NATUREL SWEET WINES (literally means, natural sweet wine) produced in the south of France by making sweet white wines to stop fermentation. The best-known examples are BANYULS, RIVESALTES AND THE ROUSSILLON COAST.

Our scheme has been developed for this aspect. Now it's starting to expand and look a little more complex.

Alcoholic Beverages – Diagram 7

AROMATIZED WINE

An aromatized wine is a fortified wine (usually white) that has been seasoned with a mixture of herbs, roots, barks, flowers, peels, and other botanicals to give the right flavor for the particular brand being produced. Aromatized wines are particularly popular in France and Italy, although some other countries produce lesser-known brands. Possibly the largest group of aromatized wines are often referred to as vermouths. The name Vermouth is derived from the German word WERMUT meaning wormwood which used to be a part of the recipe for flavoring wine.

There are many different types of wines flavored with a color between white, pink or red, sweetness/dryness and obviously flavor, the recipes are jealously guarded secrets. Some have a particular predominant flavor such as cinchona or quinine that gives the product its own bitterness, such as Dubonnet, San Rafael, Byrh. While others may not have any particular predominant or noticeable flavors, just a carefully balanced blend of botanicals, such as Martini, Cinzano, Noilly Prat, Lillet, and many others.

The alcohol content varies from 14% to 20% so they are popular as appetizers (consumed before a meal) to stimulate the appetite or as ingredients in many of the popular before dinner-cocktails.

Other drinks are often confused with these wine-based drinks, as it is also drunk as an aperitif. Which will be discussed later in the section on other drinks.

Before we go any further let's have some questions and review exercises on what has been covered by fortified and flavored wines so far.

1. Where does Jerez come from, its true origin?

2. Which style of Sherry is generally considered to be the best?

3. What does the word winemaking mean?

4. What style of sherry is said to have a slightly salty taste?

5. What is the name of the glass used to serve sherry?

6. Name of the 2 main styles of Porto.

7. The name of a style of Port matured in barrels for 4 years.

8. What kind of port is blended, but is it similar to Vintage in character?

9. Is a Vintage Port stored in barrels for how many years before being bottled?

10. What type of Madeira is considered to be the best of the dry styles?

11. Why and when is brandy added from natural sweet wines?

TASKS

1. What styles of sherry do you serve at the bar? Do they fit the description you've been given, if not how are they different?

2. How do you serve sherries in your bar? At what temperature and in what type of glassware?

3. What styles of port are available at the bar?

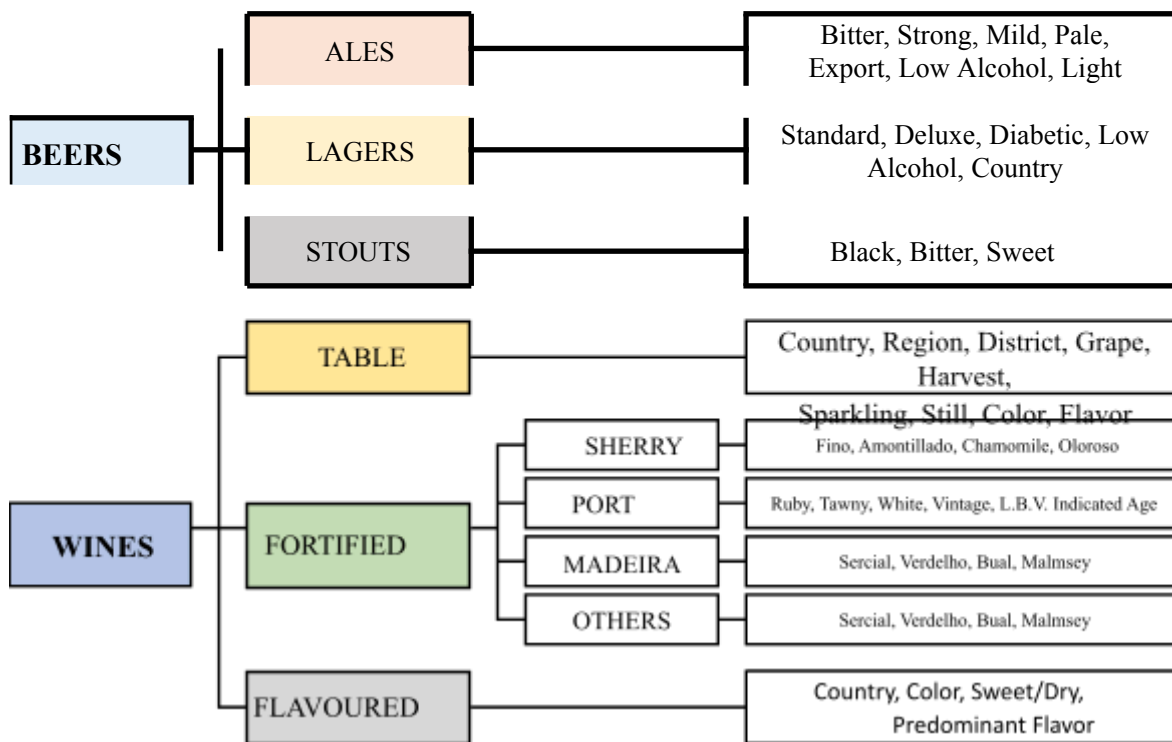

4. Does Marsala have on the bar? Where are you likely to be in a hotel or restaurant?

5. Name four brands of the aromatized wines they stock in their bar, a brief description of each with respect to color, strength, and the way they are used on the bar.

6. What is the collective name given to the flavouring agents used in the manufacture of aromatised wines?

Our WINE section has been completed for the Induction Program and our diagram so far looks like this

Alcoholic Beverages – Diagram 8

SPIRITS

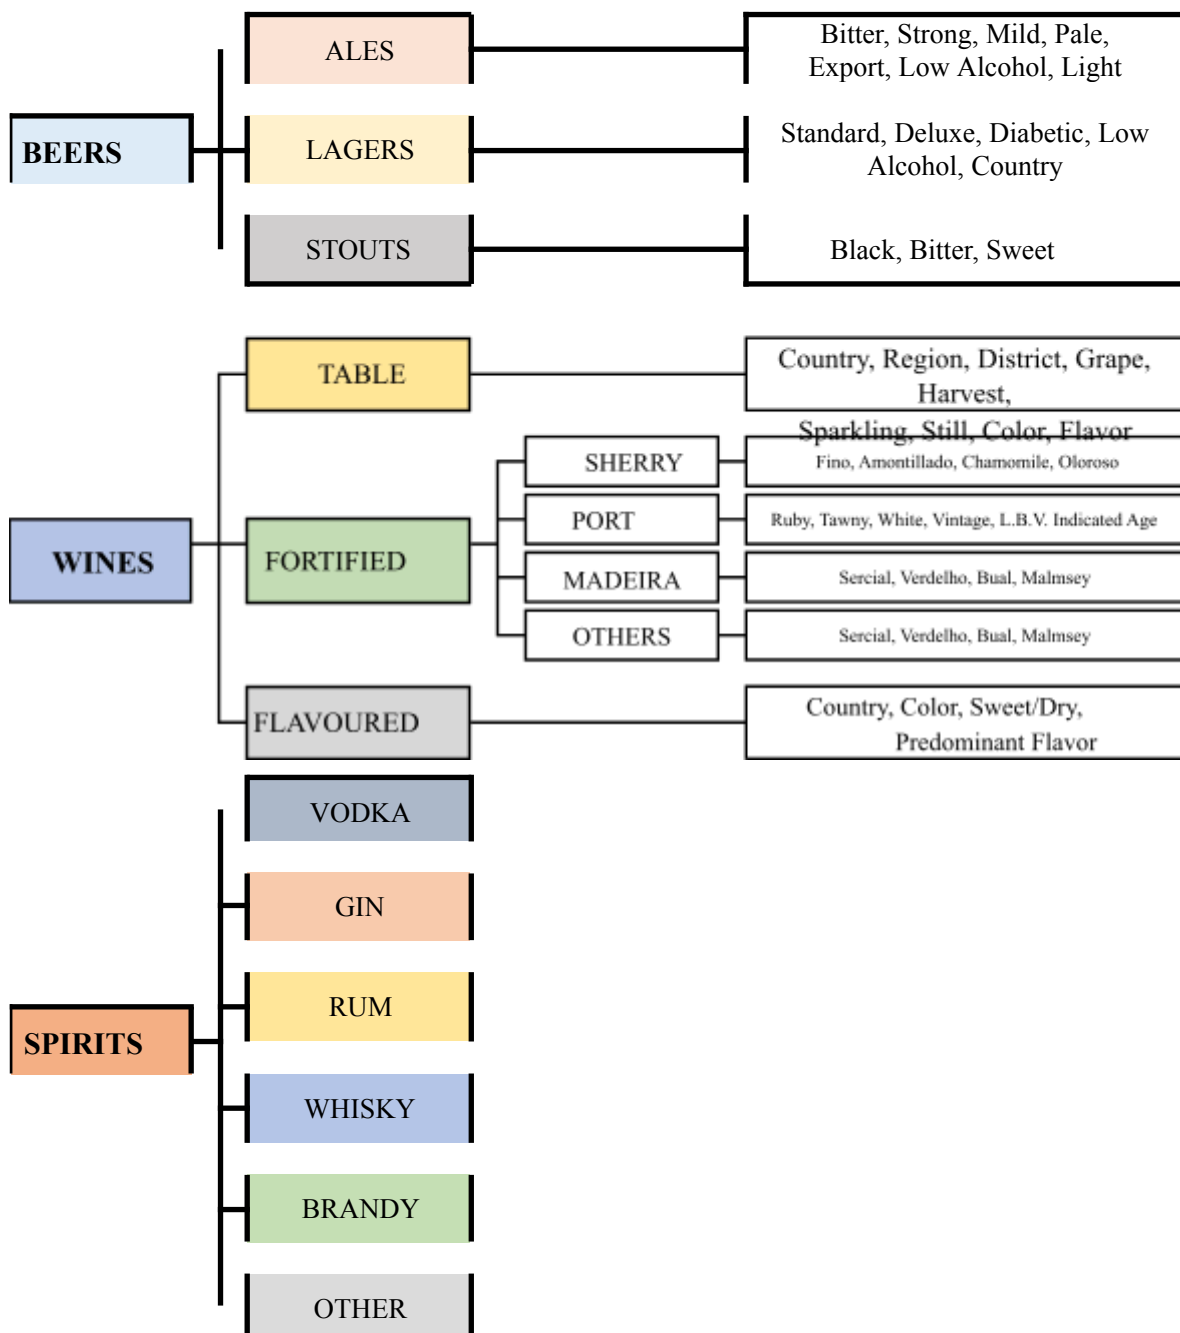

From our general introduction to spirits, we can see that there is a very wide range of products available. All international bars, however, possess the five most important, so these will be covered in this section, along with a few others that are quite often found in many bars.

As mentioned above, the term SPIRITS or SPIRITS is difficult to define due to the many different views that governments have. However, in this list are the products considered by the majority

Of countries are classified as spirits, and some other "spirits" may well be some of the arguments for or against placement in the liquor section.

The five most important spirits in the international market are VODKA, GIN, RUM, WHISKEY AND BRANDY. There are many spirits, produced, which we will classify as OTHERS (diagram 9)

Alcoholic Beverages – Diagram 9

VODKA

Supposed to have originated in the 12th century in Poland or in Russia, vodka or the name vodka means "small water". It is a neutral alcohol that is filtered several times during its manufacture to remove all traces of flavour and character, which may be in the original distillate. Many types of vodkas are available in a variety of countries of the most well-known are Russia, Poland, Sweden, Finland, the USA and the UK.

Some are flavored with herbs and peels but are generally sold unflavored. There are different qualities and strengths, the Poles and Russians are often quite potent. Vodka is always served cold or on the rocks. In Russia and Poland, it is served very cold and dry, often with hors d'oeuvres and traditionally with caviar. Other countries serve it with ice and a wide range of mixers such as cola, tonic, lemonade, etc. Very popular as an ingredient for cocktails, because it is clear and neutral in its character it forms a good base.

Vodka can be produced from a number of materials ranging from the base of potatoes, beets, rice, or sugar, but usually made from grains such as corn, barley, wheat malt, or a combination of grains. Because the base material used is distilled and filtered, it becomes less important, as there is practically no preservation and no taste of the original raw material. It is bottled at a concentration of 34% to 50% and sometimes stronger.

TASKS

1. Write the recipes for four Vodka base cocktails.

2. Give the brand names, strength, style and country of origin of the vodkas on your bar.

GIN

A neutral spirit, usually from a flavored cereal base by adding JUNIPER BERRIES, CILANTRO, and other ingredients such as herbs, barks, skins, spices, and roots known as botanicals. Many countries produce a form of gin, but the most famous styles are London DRY GIN AND HOLLAND'S GIN which has a spicier taste than London's. The gin is colorless and is usually served with tonic water or bitter lemon, usually as an appetizer, usually accompanied with ice and a slice of lemon. It is also very popular in a wide range of cocktail creations. The alcohol content ranges from 34% to 47%.

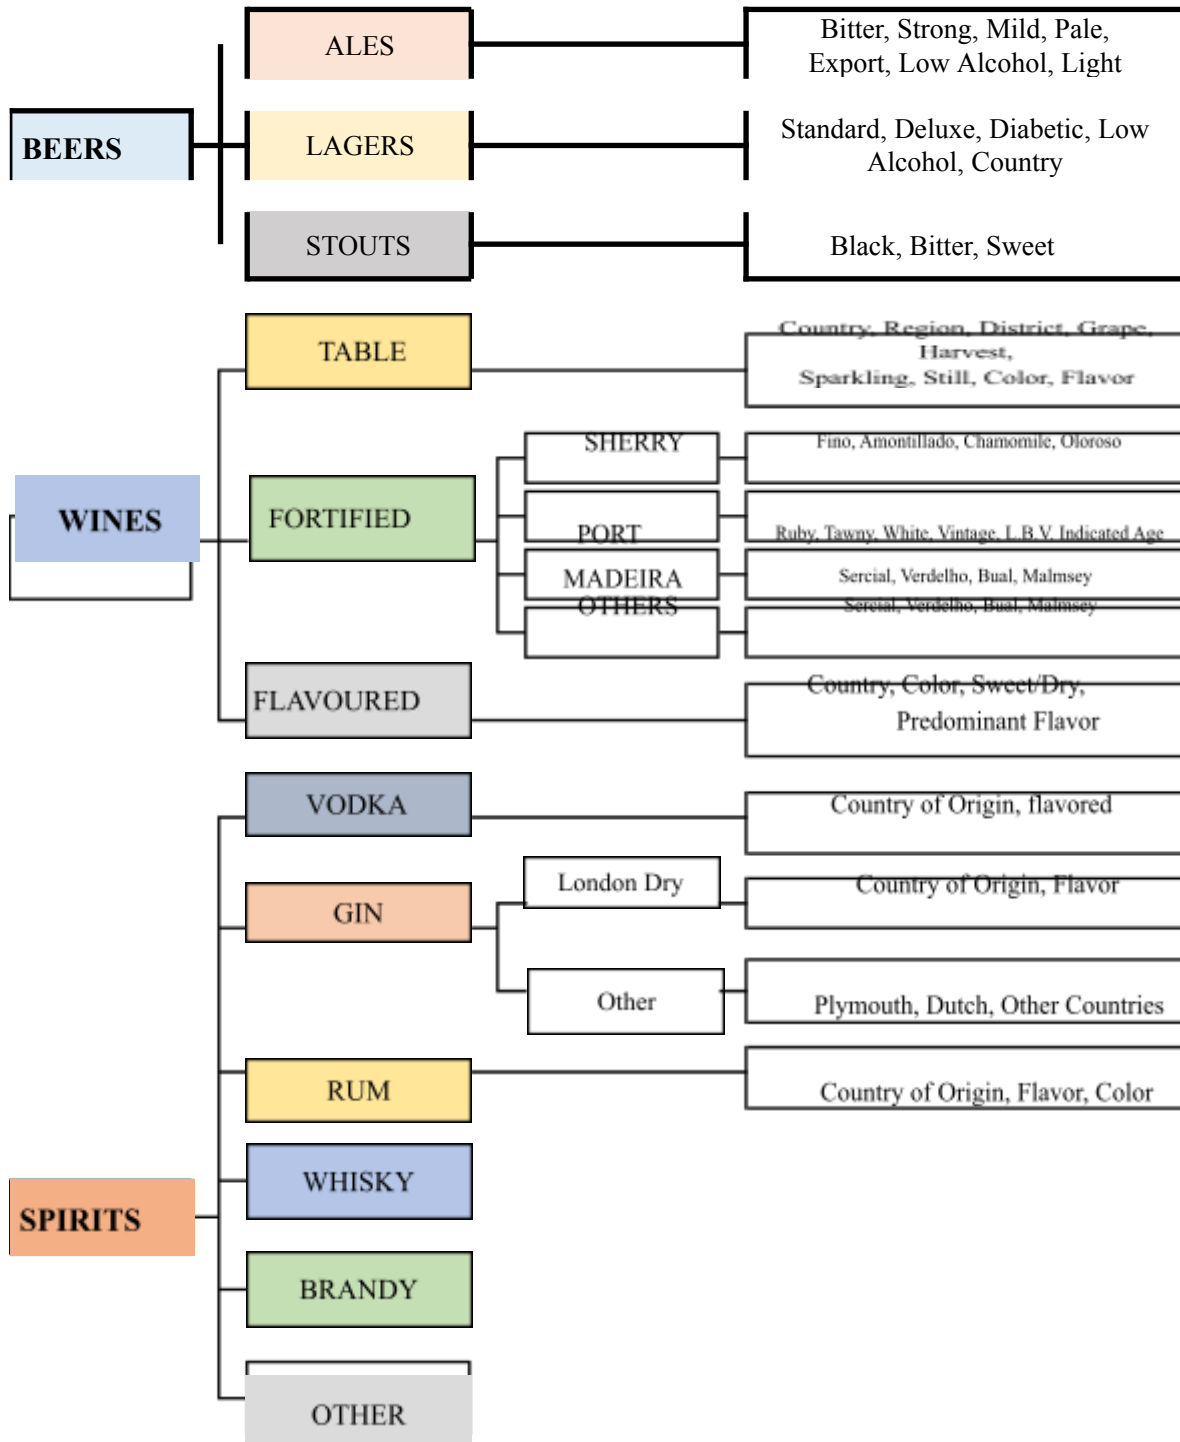

TASKS

1. Give him 4 recipes for gin-based cocktails.

2. Give the brand names, strength, style, and country of origin of the gins they stock in their bar.

Alcoholic Beverages – Diagram 10

RUM

Distilled from fermented molasses or sugar cane juice. In some countries, the minimum barrel ageing is 5 years. Rum varies in color, strength, and flavor, many countries prefer the lighter flavor. Rums are often classified according to their color and body.

For example

- I) Light in color or colorless, also light in body/spicy is produced in Mexico, Puerto Rico, Cuba.
- II) Colored and half-bodied, produced in Barbados and Trinidad, it is sometimes referred to as golden rums.
- III) Heavy rums powerful flavor, spicy dark color produced in Jamaica and Guyana.

At present, each country will produce a range of rums and not just one style.

Usually drunk with ice and a mixture, for example, cola, but best of all with tropical fruit and juices from the country of origin. Popular in cocktails and in cold countries as a hot drink, mixed with sugar, lemon, hot water and cloves (optional). Strength varies between brands, but usually from 34% to 70%.

WHISKY / WHISKEY

A spirit distilled from the sourdough of barley grains usually Malted Barley, Corn or Rye.

Whisky is produced in large quantities in several countries, but for the international market the main producing countries are Scotland, Ireland, USA, Canada and Japan. There are various styles made in each country in order to meet the different needs of the market and the use of different materials.

Here are some of the most important examples.

SCOTTISH WHISKY

They must originate from Scotland and are produced according to a body of strict rules. It has a long tradition of high quality and variety. There are two main styles or categories of whiskey for sale.

1. SINGLE MALT WHISKY

It can only be made from malted barley, water, and yeast. The result is a fermented blend (wash), then it must be distilled in a still usually twice (sometimes three times) and with a maturation of at least 3 years in oak barrels (usually for much longer)

Malt whisky can be classified as:

- ☞ SINGLE MALT meaning this is a product of just one distillery, which bears the name of the distillery on the label, in addition to the word SINGLE MALT.
- ☞ VATTED MALT, i.e. a blend of malt whiskies from two or more distilleries (usually several)

OTHER COMMENTS. The home district may also be listed on the label, e.g. Highlands, Lowlands, Islay, Cambeltown, etc. They can also have an age on the label, for example 10 years, 15 years, 20 years, etc. This means that the youngest whiskey in the bottle is the age indicated on the label.

2. BLENDED SCOTCH WHISKY

This is a BLEND (blend) of malt whisky (which gives the blend body and character) with a grain whisky ratio (which lightens the aromas and flavor of the malt). There could be as many as 40 or more single malt whisky in the mix with only one or two grains. Often, grain whiskey will comprise the largest proportion of the final blend usually reflected in the price. Grain whiskey is much lighter in style as it is distilled to higher strength and made from a blend of grains such as malted barley and corn

It is made in a continuous process and is therefore cheaper to make than malt, this still needs to be matured in barrel for a minimum of 3 years.

BLENDED WHISKY is by now the most popular type in Scotland with over 2000 registered brands.

In the international market blended Scotch whisky is served in a variety of ways, "on the rocks", or with a variety of mixers such as soda water, lemonade/ginger beer, or as an ingredient in cocktails. Like the rum that in

Colder climates can be served hot. Malt whisky is usually consumed alone or with water.

TASKS

1. Look at your bar WATCH how much Scotch whisky you can find?

2. What type are they?

3. Name of any Islay single malt whisky(s) on the bar.

4. Find out the origin of the word whiskey

IRISH WHISKEY

There are several brands of Irish whiskey for sale, however, they are all produced by one company. Almost all malt whisky is now produced in the North of Ireland and all grain whisky in the South. Irish whiskey is said to have a scented character and roundness of body, which is generally not as smoky as much in Ireland as it is in some whiskeys. Irish is often made from a blend of malted and unmalted barley and is distilled in a Pot Still is known in Ireland simply as a WHISKEY POT STILL.

Most, but not all Irish whiskey contains some whiskey pot stills made with unmalted barley.

Irish distillers were reluctant to accept the practice of adding grain alcohol to lighten the taste/body of their whisky, so Ireland had a much fuller body than the Scotch until the mid-20th century, when the export market began to expect lighter blends.

Irish malt whiskey is always DISTILLED 3 times in a still. Whisky is believed to have originated in Ireland and a distillery in Northern Ireland, it is reputed to be the oldest licensed whisky distillery in the world.

☞ SINGLE MALT

☞ POT STILL. A mixture of cereal and other malt, it is distilled in a pot still.

🍷 Mixed. A blend of Pot Still and grain whiskey.

All Irish whiskey must be matured for a minimum of 3 years in oak barrels and is normally sold at a concentration of 40%-43%. It is consumed in a similar way to the Scottish one.

CANADIAN WHISKEY

Usually referred to as rye whiskey some brands may have the word rye on the label, this tends to be confusing, as almost all Canadian whiskey are a blend of rye whiskey and others with a relatively neutral spirit, therefore they are very different from the traditional rye whiskeys of the USA. All Canadian whiskey must be barrel-aged for a minimum of 3 years.

AMERICAN WHISKEY

The U.S. basically has three styles of whiskey generally available:

1. RYE WHISKEY originating from Pennsylvania and Maryland, and probably the original American whiskey rye whiskey is said to have a hint of bitterness that is good for whetting the appetite. It is difficult to make all rye whiskey for a proportion of barley is usually added. Whiskey cannot be called rye under federal law unless it contains at least 51% rye. It must be aged in oak barrels, inside which it must be burned.

2. BOURBON DE KENTUCKY

Bourbon is made from a mixture of small amounts of rye, wheat, barley and corn of course (or corn, as it is sometimes known) which is the main ingredient. The corn used in the recipe is less characterful, or the body that whiskey usually has.

3. SOUR MASH DE TENNESSEE

Sour Mash The sour mash technique involves the use of the residue from the previous distillation that is taken from the base of the still and mixed with the beans. It helps to ensure consistency in fermentation and prevents the activities of unwanted yeasts, (wild yeasts)

AMERICAN BLENDED WHISKEY can often only contain 20% straight whiskey, with the rest being neutral alcohol, which produces a very light style of whiskey, which is heavily promoted in the domestic market.

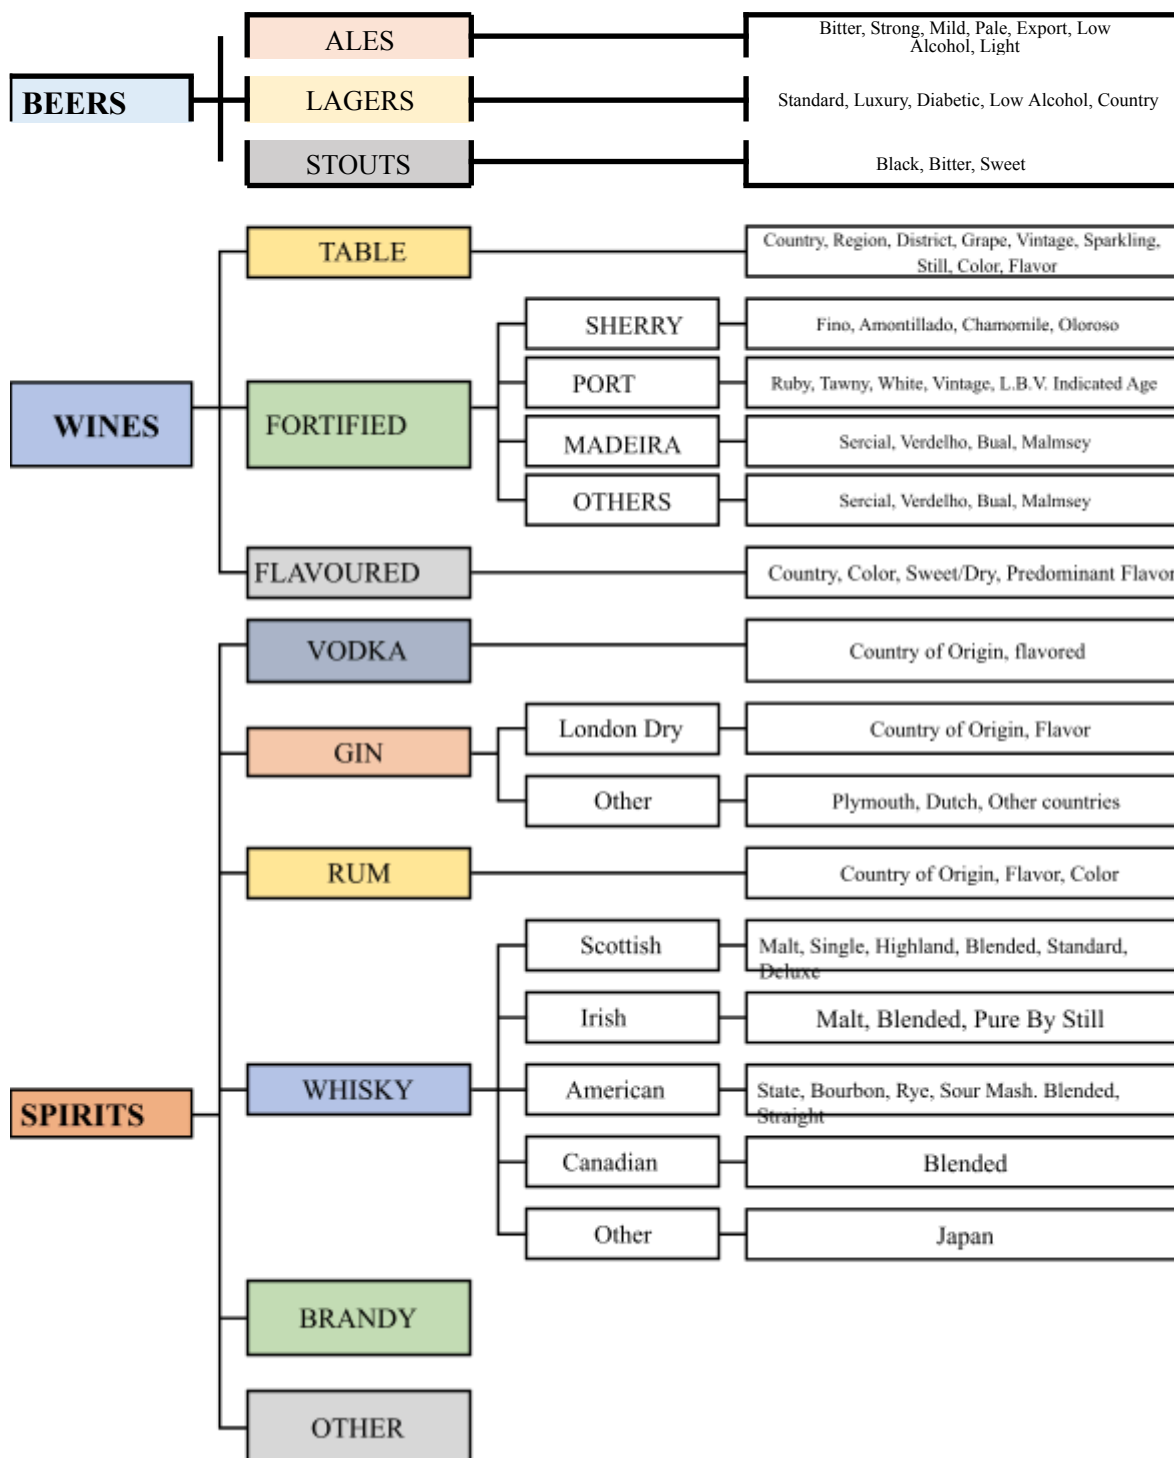

JAPANESE WHISKEY

Scotland's whisky has always been held in high esteem in Japan and Scotch whisky institutions trained the first Japanese whisky makers. The making of whiskey and Japanese whiskey are therefore similar, but the style of whiskies produced is obviously different. The first distillate in Japan in the 1920s does not have the Peatiness that Scotch whisky has, although peat is imported from Scotland as is repeated malt and single malt Scotch whisky in bulk. Japan produces a wide range of single malt whiskies for blends. Most are produced in large modern distilleries unlike in Scotland, where most production takes place in many small traditional distilleries.

Alcoholic Beverages – Diagram

11

BRANDY

Brandy is a term used to describe a product made from a distillate of fermented fruit juice. However, for the purpose of this program when brandy is referred to it means a brandy distilled from fermented grape juice and any other type of brandy will be preceded by the proper fruit. Grape brandy or brandy is made in most wine-producing countries, some are only drunk locally and not exported, while others are made primarily for export. The two best known spirits come from delimited areas of France, and these are Cognac and Armagnac. Other countries, such as Italy and Portugal, are also produced

some fine brandies (although different in character from Cognac and Armagnac), Spain, Germany, Greece, USA, South Africa and Canada are other brandy producing countries.

COGNAC

Cognac is a French brandy produced in a legally defined area and made in accordance with a body of strict rules and controls set out in French regulations. The label will always indicate that it is Cognac and often carry more information about the quality of the product, or a more detailed origin of the contents of the particular bottle, which of course is reflected in the price. Cognac is always of good quality, the controls imposed ensure a minimum standard, however, consumers have their own preferences for brand names. There are approximately 175 houses of Cognac, each house producing a wide range of cognac.

SOME TERMS FOUND ON THE LABELS.

All cognacs are a blend of cognac sourced from various parts of the region and usually a blend of many years. Each mixer/house has its own formulas for its own brand, which may have several quality categories. It is often considered that the term Napoleon, XO, Cordon Bleu, and others is used to describe a particular home style, however, these terms do not guarantee the cognac is of a certain age, but usually indicate that it is a high-quality/luxury product of that particular house/company. Cognac are generally not sold for export for 3 years, after having been aged in oak barrels.

The term VS or three stars on the label in a very special way. In general, this indicates that it is standard Cognac of the house/company, it does not relate to age, 3 stars, it does not mean that it is three years old. Depending on the house it might well be 5 years old or older, but it will be younger than the VSOP mix.

The term stands for VSOP Very Superior Pale Aged as in VS is actually a

Cognac style is not a Cognac of any age, but per the French cognac law the bottle must be at least 4 years before they can be exported and called VSOP. In fact, the age of VSOP cognac marked by reputable houses are much older, often with cognac 12 years or older in the mix.

The term CHAMPAGNE well on a label means that the cognac inside the bottle must have its origin in the two best areas of the Cognac production region, Grand Champagne and Petit Champagne at least 50% of which must come from the most superior Grand Champagne.

A Napoleon cognac labeled typically contains cognac no less than 5 years old, usually much older, and refers to a style of cognac.

The terms will also appear on the labels of other French brandies not produced in Cognac or Armagnac. The terms used on labels are not an indication of age or quality, the brandy inside is usually inferior to even the poorest Cognac or Armagnac.

The strength of Cognac is usually 40% or higher. Luxury cognac is usually consumed dried at the end of a meal, served in a balloon of schnapps or brandy glass (see Module 4 Bar Equipment)

3-star or VS. Cognacs are often sold with water, soda, lemonade, ginger ale, etc. A glass of cognac is not necessary if sold with a mixture.

ARMAGNAC

It originates in a defined area in the Gers department near the Pyrenees. Brandy Armagnac is full-bodied. It is often marketed in flat long-neck bottles known as Basquaise. The name Bas Armagnac on the label is generally of higher quality and should be made entirely from the Armagnac area. Similar terminology to Cognac has been labeled. Served in a similar way to Cognac.

OTHER SPIRITS

As mentioned above most countries produce a spirit of some kind, either for domestic consumption or for the export market, this section will see a few examples of the more well-known "other spirits"

EAU-DE-VIE

A very popular group of spirits in France, they are basically fruit spirits, produced mostly in the Alsace/Lorraine area of northeastern France. They are usually colorless and dry to taste. Many times they are alcoholics and tend to be

expensive due to the amount of fresh fruit needed to make them, for example, it takes approximately 35 kilos of raspberries to make 1 liter of framboise.

Other popular spirits are the following:

- ☞ PRAISE: The strawberry spirit.
- ☞ MIRABELLE: A brandy made from a small yellow plum.
- ☞ POIRÉ WILLIAM: Made from William pears.
- ☞ MYRTILLE: Blueberry distillate.
- ☞ KIRSCH: From cherries.
- ☞ In addition to many others.

It is important not to confuse these fruit spirits with liqueur that have similar names. The spirits above are not sweetened.

Germany produces similar Eau De Vie, the framboise-like HIMBERGEEST is probably the best known. Yugoslavia produces the well-known plum spirit called SLIVOVITZ; Eastern European countries produce similar plum spirits called similar names.

TEQUILA

The famous spirit of Mexico, distilled from the fermented juice of the maguey (Agave Azul Tequilana Weber). Traditionally drunk by taking a pinch of salt from the back of your hand, drizzle a few drops of lime or lemon on your tongue and finally swallow a measure of chilled pure tequila. It is also very popular in drinks such as Tequila Sunrise and Margarita.

SCHNAPPS (GERMANY)

SCHNAPPS (Denmark) SNAPS (Sweden), which literally means start or reach. This spirit is very popular in Scandinavia, Germany, Switzerland and Austria. A schnapps sometimes flavored with fruit and seeds, if made into a liqueur sweetener, popular flavors include mint and peach.

AQUAVIT

From Denmark and Norway, cumin-flavored and generally herself flame low the Generic name of Schnaps.

MARC / GRAPPA / BRANDY / PISCO

A spirit made from the residue of grapes after being pressed. Most wine-producing countries produce such a spirit.

CALVADOS

From Normandy in France, distilled from cider (fermented apple juice). A similar product is made in the U.S. and Canada called apple schnapps.

If we now look in the liquor section and try to sort it into one sort of picture it gets to the next one (diagram 12).

TASKS

Please note that spirits are produced in most countries and therefore you will know of many others, if you do, why not make a list of spirits (as defined above) and complete the following.

1. What are the main agents used for gin flavoring?

2. What is RUM distilled from?

3. What brands of rum do you have in your bar? List them, give their country of origin, color, alcohol content, and style.

4. Name three cocktails that contain Rum and give the recipes.

5. What is the main ingredient of cereals used in the manufacture of Bourbon?

6. What is the difference between blended Scotch and malt Scotch?

7. What are Canadian whiskeys generally called RYE?

8. What does the term Fine Champagne mean in a bottle of cognac?

9. What does the term Schnapps mean?

10. What is an-Eau-de-vie?

11. In the making of gin, what is the collective name for flavoring agents and where have you heard before in this program?

Alcoholic Beverages – Diagram 12

LIQUEURS

Known as **CORDIALS** in the U.S. and **DIGESTIVES** in France, liqueurs are spirits that have been sweetened and flavored. They are often consumed after a special meal, where the herbal liqueur contains an element of 'digestion'. Liqueurs are smooth, sweet and vary considerably in alcohol content, which can be colorless or colored, for example, very bright reds, blue, green, yellow, purple, there are endless variations of colors. They are widely used in the manufacture of cocktails for their color, flavor, and sweetness. Sorting spirits is difficult due to the wide range available and the complexity of their manufacture. They could be classified in various ways, for example, according to their color, most used flavors, the basic spirit used, the degree of sweetness (very popular method in France) or more simply by the fact that it is a generic brand or name. For example, TIA MARIA is a well-known brand and used exclusively by that company, while CREMA DE CAFE is also a coffee-flavored liqueur, but any other liquor manufacturer can call their coffee coffee-flavored liqueur, so it's **GENERIC**. Probably the simplest way to rank would be to list it in alphabetical order with a brief description of each.

FOR THE BENEFIT OF THIS CLASSIFICATION PROGRAM, the following shall apply:
 Following:

1. FRUIT LIQUEURS
2. CITRUS LIQUEURS
3. HERB LIQUEURS
4. LIQUEURS WITH A PREDOMINANT HERBAL FLAVOR
5. Kernels and almond liqueurs
6. FLOWER AND LEAF LIQUEURS
7. MISCELLANEOUS LIQUORS

Below is a selection of some of the **VARIOUS WELL-known** liqueurs.

The letter **(B)** after that means it's a brand name. The letter **(G)** indicates a generic name.

1. Fruit liqueurs

CHERRY BRANDY (G) of the company in several countries and marketed under many brands.

CHERRY WHISKEY (G) is not as popular as cherry brandy.

MARASCHINO (G) A clear sweet liqueur that does not have an intense flavor and is very popular to add to fruit salads, jellies and sorbets. Produced from maraschino cherries.

APRICOT LIQUEURS (G) Most companies producing apricot liqueur will include a flavoured liqueur in their product range.

APRICOT BRANDY even though they are strictly liqueurs. They are usually from macerating ripe apricots with grape brandy or neutral alcohol, some of the seeds were left with them an almost almond like the flavor, extracts from the kernels and apricot EAU DE VIE can also be added.

PEACH LIQUEURS (G) made in a similar way to apricot liqueurs and is also called peach brandy. Peach kernels are often included to give more flavor and character to the liquor. They are sweet and rich and produced by most of the major liquor companies.

BERRY LIQUEURS. Many red fruits are used to make various popular liqueurs and as mentioned in the spirits section they are often confused with the spirit eau de vie (EDV), which are often added to liqueurs to give delicacy. Below is a list of some of the most well-known liqueurs made from soft fruits.

- ☞ RASPBERRY LIQUEUR, usually called Framboise or Cream of Ramboises (all G's)
- ☞ STRAWBERRY LIQUEUR, Creme de (G)
- ☞ WILD STRAWBERRY LIQUEUR, Creme-des-Bois (B)

- ☞ CURRANT LIQUEUR, Cassis Cream (G)
- ☞ BLACKBERRY LIQUEUR, CRÈME DE Mûre (G)

OTHER FRUIT LIQUEURS

SOUMUURAIN or LAKKA (G). From blackberries from the swamps that are grown in the Arctic Circle. A product of Finland

SLOE GIN (G). A rich, dark purple, almost colored sweet liqueur produced by some gin companies and liqueur companies by adding the fruit of the blackthorn (called sloes) in gin. It is said to be an aid to digestion, liquor is usually matured in wood before being marketed.

PRUNELLE CREAM (G). Liqueurs made from plums sometimes with the addition of grains.

CRÈME D'ANANAS (G). Pineapple liqueur. It has several types from various countries, usually yellow/gold and quite sweet.

BANANA CREAM (G). Banana flavored, made by macerating bananas in pure spirit, pale sweet yellow, made by various companies.

2. CITRUS LIQUEURS

CURAÇAO (G). Originally, the name derives from a liqueur made from the fruit of the island of Curacao. From the peel of the orange, it contains many of the essential oils needed for good taste. Curacao is produced by many well-known companies, and is available in several colors: blue, brown, red, green, and orange. Triple Sec (G) refers to a Curacao that is colorless.

COINTREAU (B). A well-known brand of a Triple Sec style, the house of Cointreau was founded in 1849 and still produces liqueurs in Angers, in the Loire area of France

Grand Marnier (B). A Cognac with an orange liqueur flavour obtained from the distillation of oranges macerated in Cognac

Lemon liqueur (G). Several types and brands available tend to be rich in the essential oils that lemons contain. Usually yellow.

MANDARIN CREAM (G). It is obtained from the dried peel of tangerine in a similar way to Curacao. Produced in France, Holland, Denmark and Italy, a well-known brand from Belgium is MANDARINE NAPOLEON.

VAN DER HUM (G). A South African liqueur from naartjies (a type of orange) and flavored seeds from other fruits and aromas, there are several manufacturers. Van der Hum's name means lord 'What is his name, like the Dutch settlers in South Africa, where he can't remember the name of the drink's inventor?

3. HERB LIQUEURS

BENEDICTIN (B). This elixir is said to have been discovered by the monks of the abbey of Fécamp in northern France and was used to revive tired monks after the fatigues of the hard day in the countryside. It was also used in the area to help fight different diseases. Now famous around the world, each bottle has the letters DOM 'Deo Optimo Maximo', meaning "God of the Good, the Greatest". B &

B(B), as the name implies, is a blend of Benedictine and brandy and is drier in style.

CHARTREUSE (B). A monastic liqueur, which is available in two colors: green with strength of 55% and yellow 43%. It is said that there are 130 different herbs used in its manufacture added on various occasions and in various ways, like many other liqueurs, the current recipe is a closely guarded secret.

DRAMBUIE (B). The name derives from the Gaelic meaning "a buidheach dram", "the drink that satisfies". Derived from an ancient recipe that is based on Scotch whisky, herbs and honey.

Glavya (B). A blend of Scotch whisky, herbs and honey. Other well-known base Scotch whisky spirits include Glen Mist, Loch Lomond and Lochan Ora. (All B)

IRISH MIST (B). A product similar to the previous one but based on Irish whiskey.

IZARRA (B). Made with Armagnac brandy in the Basque area of France in the foothills of the Pyrenees, where the flowers and herbs that are used to flavor the liqueur are sourced, available in green or yellow color, green being the strongest. Izarra's name is Basquaise de Estrellas. Made since 1835.

GALLIANO (B). An Italian golden yellow herbal liqueur in a tall, transparent bottle the liqueur owes its name to Commander Giuseppe Galliano a war hero, with fortitude he defended in the 19th century still appears on the label.

FORTY-THREE (B). A Spanish herbal liqueur from 43 herbs as the name suggests. Golden color.

JAGERMEISTER (B). A dark-colored German liqueur, flavored with herbs.

STREGA (B). A yellow color and is made from 70 herbs and barks of a formula that may be centuries old. The name is Italian for "witch" and is said to be the name of an ancient sect that is used to drink a love potion.

4. LIQUEURS WITH A PREDOMINANT FLAVOUR

ANISE (G). Most companies that produce aniseed liqueurs in their range. It is flavored anise and generally pure white (colorless).

KUMMEL (G). It is said to be one of the best liqueurs that acts as a digestive that has a cumin flavor. There are many brands on the market from various countries.

MINT FLAVORED LIQUEURS

Mint Cream. It has good digestive qualities and is aggravated by most liquor manufacturers. Available in green or colorless, it is one of the most popular liqueurs to be served, frappé.

5. BEAN AND KERNEL LIQUEURS

Amaretto (G) An Italian almond liqueur. Several companies produce almond liqueur, but the best known is undoubtedly the Amaretto di Saronno originated by the house of Di Saronno ILLVA. The alcohol content is 28%

Cocoa cream (G). Produced by most manufacturers, this liqueur is very popular for use in making cocktails, sometimes sold as chocolate liqueur. Available in colorless or brown form.

Mint chocolate (G). Several companies produce mint chocolate liqueur. They can be brownish-green, colorless, or pale in color.

COFFEE FLAVOR. Many brands are available in various countries, including the following,

Kahlúa (B). Mexico is home to this popular liquor; it has a different flavor and Tia Maria style.

AUNT MARIA (B). It originated in Jamaica based on Blue Mountain coffee rum and spices.

COFFEE CREAM (G). A variety available from several of the well-known liquor houses.

OTHER

CREAM OF NOYAUX (G). An almond-flavored liqueur is often made from the legend extracts of the kernels/stones of peaches and/or apricots.

VANILLA CREAM (G). Flavored with vanilla, this liqueur is often rich and smooth.

CREAM D'AMANDES (G). Flavored almonds, usually quite sweet.

NOISETTES CREAM (G). Nutty liqueur, e.g. hazelnut liqueur Frangelico (B).

6. FLOWER BLOSSOM AND LEAF LIQUEURS

There are only a few liquors made in the above category, two of which are as follows:

ROSE CREAM (G). Produced from oils extracted from rose petals, usually with other additional seasonings, such as vanilla and citrus oils.

CREAM OF VIOLETS (G). From the petals of violets, Creme YVETTE is a well-known version.

7. MISCELLANEOUS LIQUORS

ADVOCAAT (G). A thick, creamy yellow product from egg yolks and brandy, often containing additional vanilla flavorings, citrus peel, and Kirsch extracts. Advocaat is made by several of the main houses, which is used as eggnog.

PONCHE SOTO (B). A dark brown Spanish liqueur has a distinctive sherry flavor and an unusual silver bottle.

CREAM-BASED LIQUEURS

There hasn't been a huge increase in the number of "fresh" cream-based liqueurs in recent years. The trend started with Baileys (B) produced in Ireland, many other countries already produce similar cream-based liqueurs, including Italy, France, Scotland, USA, Australia and Germany. Most have relatively low alcohol content.

While this is not an exhaustive list it offers a small cross-section of the hundreds of spirits around the world.

TASKS

1. Go to the bar, look at the liquors on your shelves and answer the following questions in the form of a list.
 - a) What flavor are they and what classifications do you think will enter?

 - b) What alcohol content are they?

 - c) Which country produces it?

 - d) What are they good for in the bar?

 - e) Are they brand names or generic names?

2. What are the spirits produced in your country that are not listed? Give its color, flavor (s) and strength.

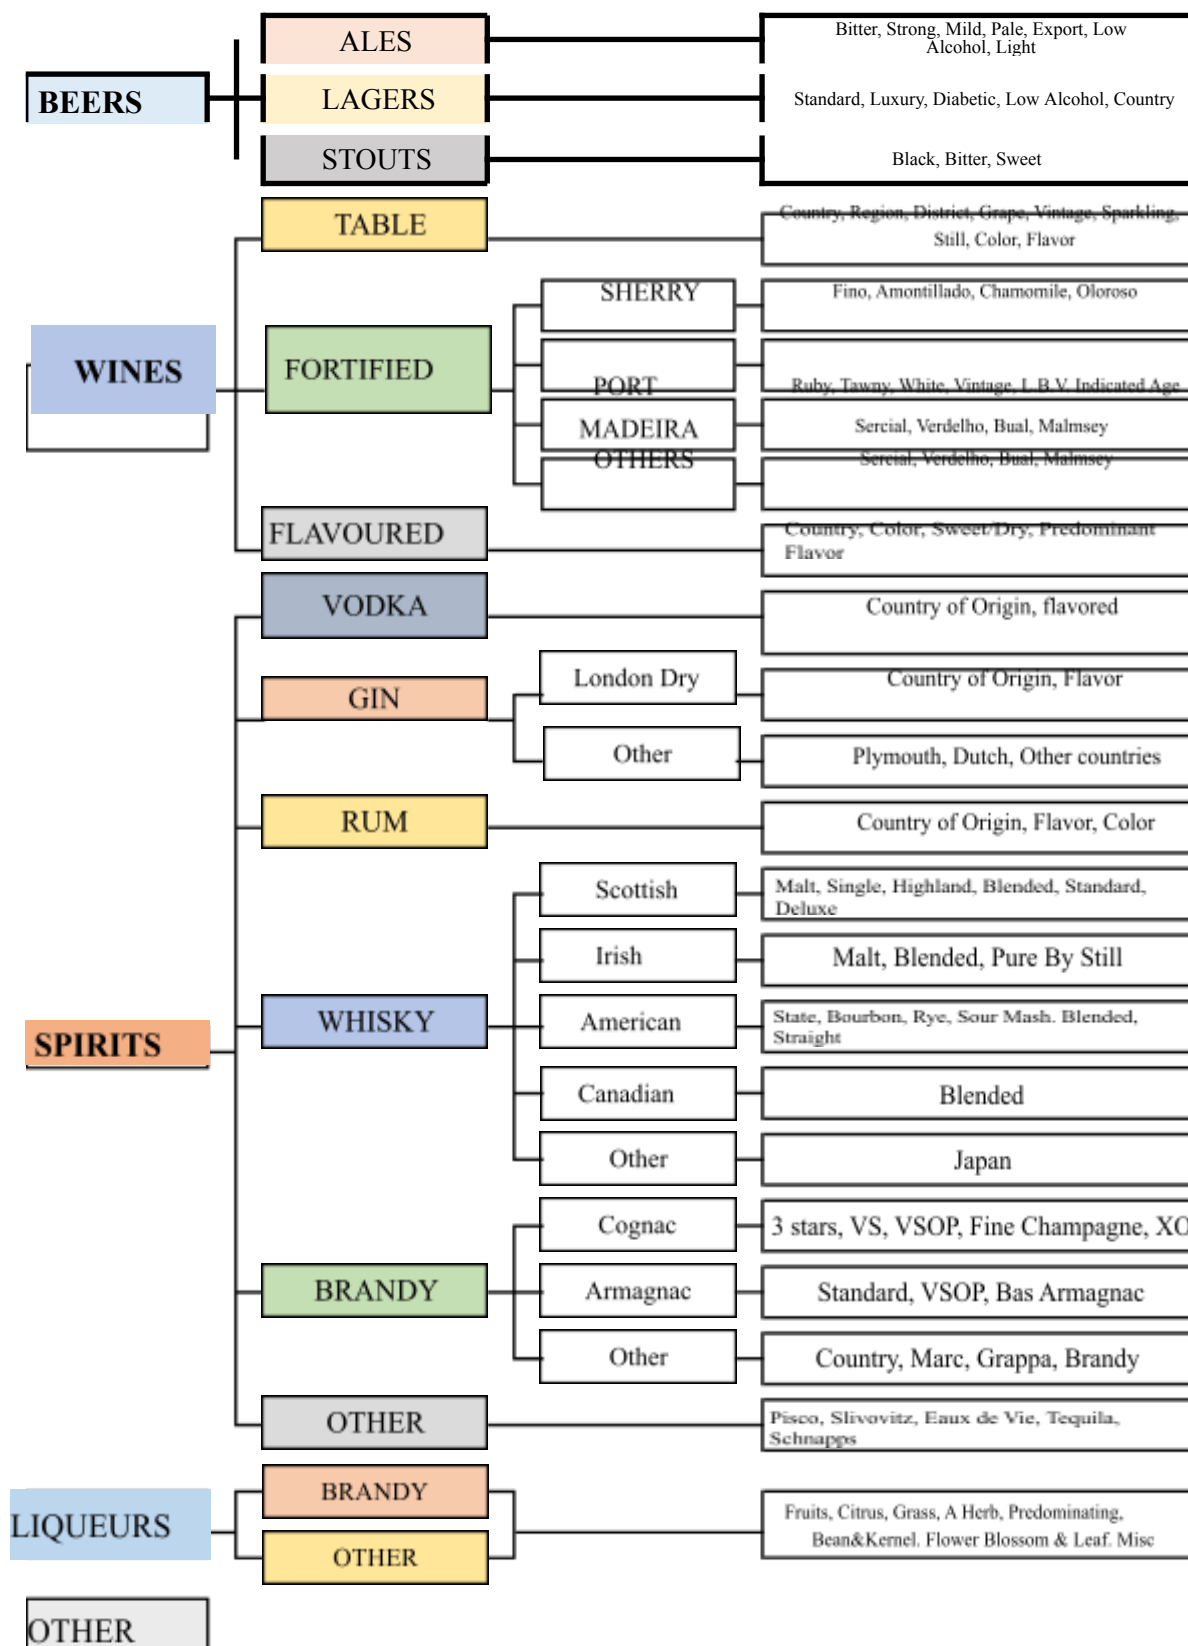

- 3) List of five different ways spirits can be used.

- 4) List and briefly describe at least 6 products that you consider to be liquor.

Having completed these simple tasks, you should now appreciate the complexity and variety of spirits available, and this is just a small sample of hundreds of all the world available. (See diagram 13)

Alcoholic Beverages – Diagram 13

MISCELLANEOUS OR OTHER PRODUCTS

This section searches for some products that for one reason or another do not fit comfortably into the above categories of beer, wine, or spirits. These products include the following as examples.

BITTER

There are three categories of bitters, which are usually strong-tasting and aromatic-bitter. They have various uses and are very popular in European countries such as France and Italy.

The three categories are

- i) **APERITIVE BITTERS** These can be simple bitters such as the popular Campari, Picon Amer (bitter orange with flavor) or Martinazzi, which have a characteristic dry, aromatic, bitter taste or can be sweetened bitter such as Calisay or Chinese Martini.

- ii) **AROMATIC BITTERS** are used in very small amounts, mainly in cocktails, which have a very strong flavor and are distributed by decline or in small amounts. These include peach, orange, lime and of course the famous Angostura bitter.

iii) **DIGESTIVE BITTERS** are often used as a recovery aid after overindulgence of food and/or beverages. Well-known brand names include Underberg and Fernet Branca.

Note: Please note. Bitters are made by different methods of imparting aromatic botanicals and bitter husks into the spirits. They are marketed in a variety of strengths ranging from approximately 20% to 55%.

SPIRITS BASED ON ANISEED PRODUCTS

There have always been differences of opinion about the classification of products based on neutral alcohol flavored with anise or licorice or a combination of both.

In some countries they are classified as liqueurs, because they are sweet and based on a spirit, while in native France they are consumed as an aperitif and are classified as an aperitif.

However, in order to avoid controversy, for the benefit of this program, they are classified as others. Included in this category are products such as Pernod, Ricard, Pastis 51, Anís.Berger Blanc, Duval, Ouzo, Arak Cristal and many others to mention.

CUPS

Probably the most famous glass is Pimms made from a base spirit (GIN) and seasoned with a blend of herbs, fruits, and other botanicals.

BASE OF FRISANTES WINES

Many of these drinks are available and are basically white wine mixed with a variety of fruit juices, ranging from a blend of tropical fruits such as passion fruit, mango and papaya, to lemon and orange.

CIDER

Fermented apple juice is sold in various concentrations, usually similar to or slightly stronger than beer.

SAKE

Made from rice, it can be sold as a type of beer product or more, usually outside of Japan as a rice wine served heated to blood temperature in porcelain or refrigerated cups.

MISTELLE

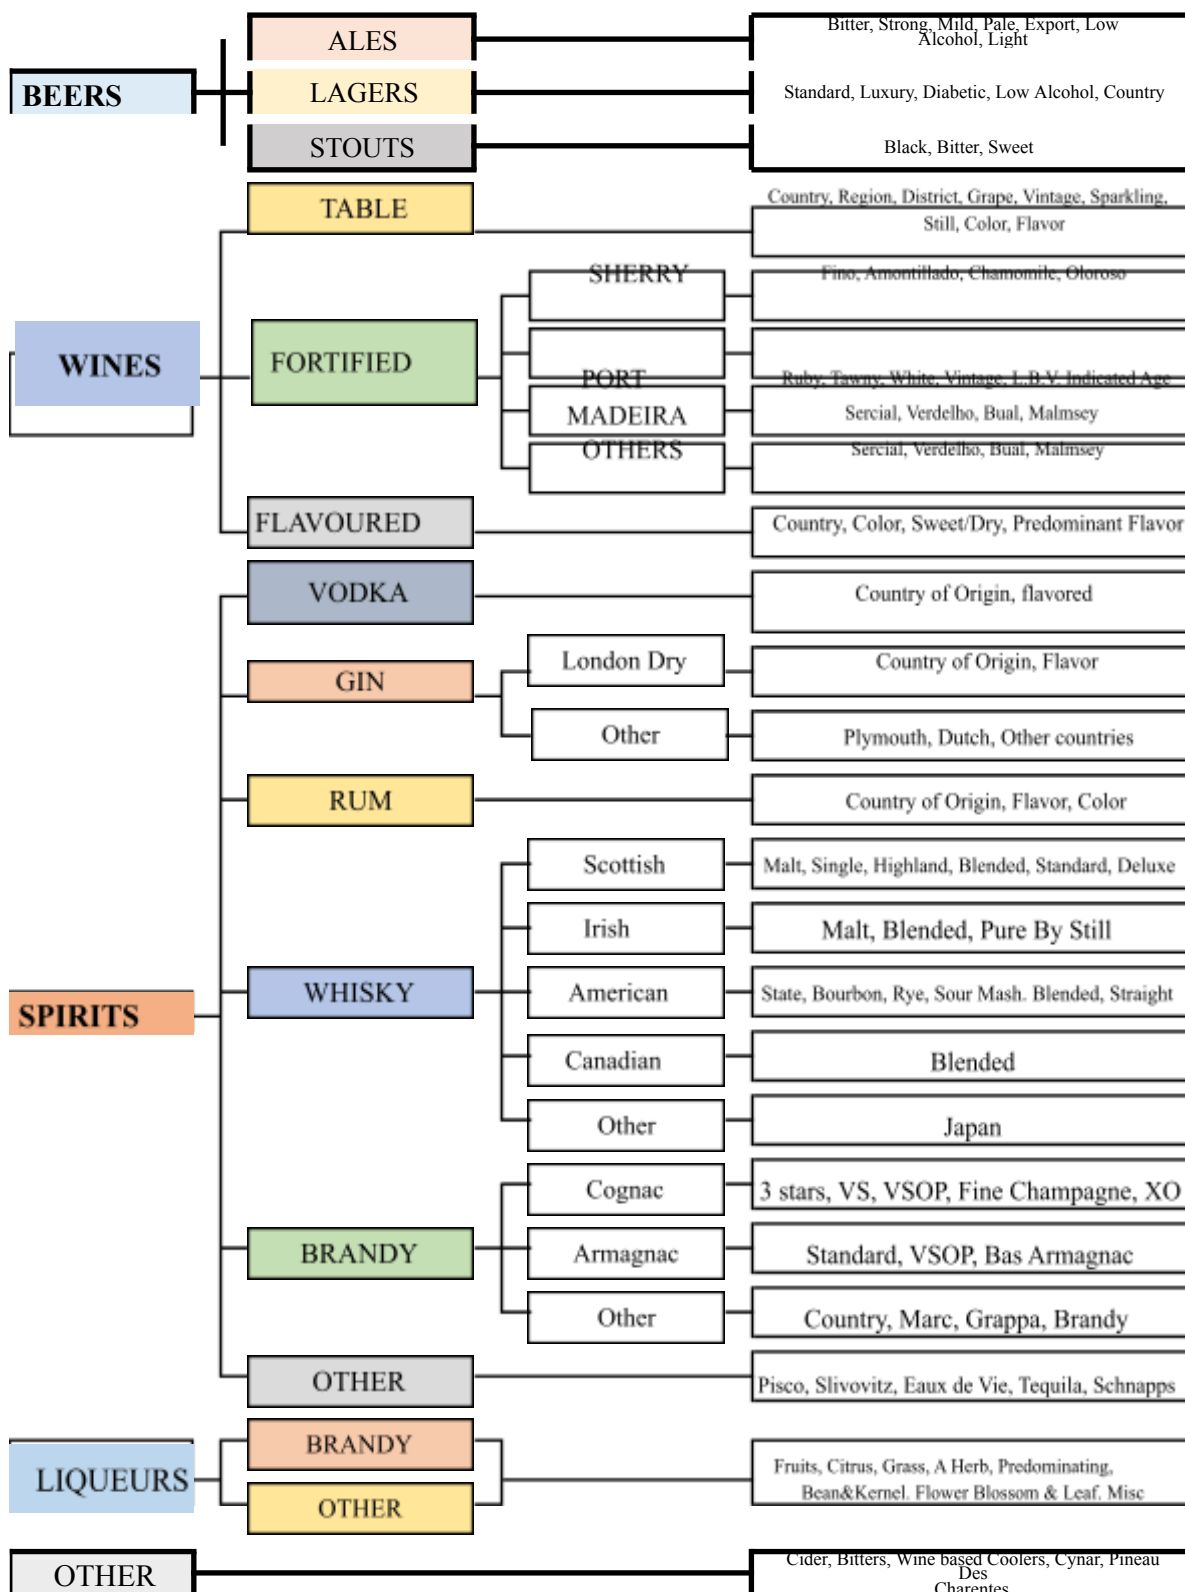

Grape juice enriched with a spirit (usually brandy) being the most famous Pineau des Charentes. Although this product is sweet to the palate, it is consumed in France as an aperitif. Types of mistelle products are produced in several countries such as Italy and France.

We have already completed the section on the classification of alcoholic beverages and putting all the pieces of the puzzle together should give us the following diagram. Of course there are many that are not in your country, there will be products that are not available elsewhere, but I hope that by following the definitions and a little research on your part you should be able to classify.

Alcoholic Beverages – Diagram 14

[illegible]

MODULE 7b

PRODUCT CLASSIFICATION (non-alcoholic)

For the purpose of this program, the term nonalcoholic means, as the name implies, free of all alcohol.

The general term non-alcoholic beverages include a variety of products made from a wide range of base materials. They could be divided into a simple classification of carbonated beverages (the beverage contains carbon dioxide (CO₂), this gas is naturally present or artificially injected into the drink) or they can be still non-carbonated, however, this classification has been divided into several categories. For our purposes, then non-alcoholic are classified into:-

1. FRUIT JUICES
2. Liqueurs/syrups (often spelt syrups)
3. MINERAL WATERS
4. SEVERAL

FRUIT JUICES

Fruit juices are available in various forms and in different qualities. Legislation regarding the term 'fruit juices' varies from country to country. Let's take a look at the range of fruit juices.

FRESHLY SQUEEZED

The range available to the bartender very often depends on the availability of the appropriate fruit and the prices in each country. In some countries, fresh fruit is unavailable or too expensive, in other countries it is plentiful and cheap.

The most popular of the freshly squeezed fruit juices for bar use are citrus juices, such as lemon, orange, grapefruit, and lime. Citrus fruits are usually pressed or squeezed either by using a handheld juicer or an electric version. When either method is used it is guaranteed that the fruit has been washed, and that it is fresh and good. You can get more juice from citrus fruits that are at room temperature or have warmed up a bit, than from fruit that has just been extracted from a refrigerator.

Some countries are fortunate to also have an available supply of other fruits such as peaches, apricots, bananas, pineapples, mangoes, papayas (papaya), passion fruits, tangerines, cherries, strawberries, raspberries, and many more.

Fresh juices can be consumed as such, or they can be incorporated into a cocktail. Soft fruits can be incorporated by "mixing", the fruit is checked for solidity, peeled (if appropriate), cut into smaller and more manageable pieces added with the other ingredients in the blender (See module 6). Care should be taken to remove nuggets or stones, as they can damage the blender blades. Fruit that has been prepared in this way is not strictly a juice, but a "pulp".

If fruit juice is prepared in advance, the juices should be stored under refrigeration until the time it is required, it is not necessary to keep them on the bar counter or on the work surface. They are best kept in a glass jar that is lightly covered, but not closed.

The number of juices prepared should be carefully monitored, as even when stored in a refrigerator they have a limited shelf life. Before use, they should be stirred as the solid matter (pulp) tends to sink to the bottom of the container. If they have been stored for a while this should be discreetly tested before use.

PREPARED FRUIT JUICES

Most citrus juices can be purchased prepared in bottles, cans, waxed cardboard or plastic containers, each country has a good range of brands available. Non-citrus juices such as pineapple, tomato, apple, pear and grape are also available in this type of packaging. Juices of this type are consumed as they are, but they can also be mixed with a wide range of alcoholic products, such as a long drink or a short cocktail (see module 6). Pre-mixed fruit juice blends are also available, often sold as "tropical blends," e.g., passion fruit, mango, and papaya, blended.

LIQUEURS / SYRUPS

Liqueurs and syrups are a concentrated form of juice usually with a high sugar content. They are widely used in bars to sweeten and flavour mixed drinks; they can be added to spirits to make them less 'fiery' or simply diluted with water to make a 'smooth' drink.

Most liqueurs and syrups are completely alcohol-free, although some may have a small amount of alcohol added, so that it does not ferment.

Listed below are some popular types of liquors/syrups found on the bar:

ANIS - flavored anise usually white in color.

CASSIS – A popular product from blackcurrants, one of the most famous areas in which it is made is Dijon in France.

CHERRY – Cherry or sometimes black cherry flavor, usually dark red in color and can be very heavy in density.

CITRON - lemon-flavored, usually yellow in color.

GINGER - Usually dark brown, used with dark rums or sometimes with whiskey.

STRAWBERRY - strawberry flavor, red in color.

RASPBERRY – raspberry flavor, red in color.

GUM SYRUP - Made from sugarcane, colorless, widely used to sweeten mixed beverages.

GRANADINE - Pomegranate flavor, it is an intense red color and is widely used to color and sweeten a wide variety of mixed drinks, it is very dense.

UME – A liqueur made from limes, usually pale green in color.

MINT (Mint) – mint-flavored, produced as both a liqueur and a syrup, available in a colorless or green-colored form.

The above are some of the most popular examples found in bars, but there are many more. Look around your bar and see if a few others can be found, if you can, make a list and brief description of each.

MINERAL WATER

There are two main types of mineral water,

- ☞ Those that are manufactured.
- ☞ Those that are NATURAL or ABOVE ALL NATURAL, possibly with some help from the manufacturers, e.g. filtered and possibly artificially gassed.
- ☞ MANUFACTURED MINERAL WATER

Often referred to as MIXERS as they are popularly used to mix with a spirit or an alcoholic ingredient. These products are made from demineralized, purified water and mixed with proportions of concentrated flavors, probably a little sugar syrup, filtered and carbonated with carbon dioxide (CO₂) gas. In addition to being used as "mixers", these products are widely used in long mixed drinks or simply drinks with their own ice or just chilled.

Some examples are as follows.

TONIC WATER (quinine flavored)
BITTER LEMON (lemon flavored)
SODA WATER (unflavored)
LEMONADE
GINGER ALE (in varying degrees of sweetness and ginger strength).
COLA (worldwide drinks neat or on the rocks)
ORANGE & OTHER FRUIT-FLAVORED CARBONATED BEVERAGES

Most countries produce a range of the above types of "soft" drinks As you did for liqueurs and syrups, take a look at the products you have in your bar, the list of those that have not already been mentioned, and the state of the aroma: - NM

NATURAL MINERAL WATERS (sometimes called table waters)

It is important not to confuse what is called "bottled water" with "natural mineral water". There is a wide range of bottled water available, but only a small part of it is authentic mineral water. Authentic mineral water contains health properties that are usually removed as water supplies for domestic use, as the manufacture of water is "difficult", therefore making it difficult to form foam or foam for washing, mineral water is healthier to drink, as it contains many natural minerals, that are necessary for a healthy body. Most mineral waters contain several minerals or a preponderance of a certain one or two. In Europe health "SPAS" (cities or areas where this type of water was available) have been popular for many hundreds of years as health centers where local waters are used for drinking and bathing. There is good evidence to corroborate some of these ideas and traditional practices as "healthy." The terminology related to natural mineral waters is complex and varies from country to country, all we can do is read the label carefully.

SOME EXAMPLES OF WELL-KNOWN NATURAL MINERAL WATERS

APOLLINARIS (West Germany) - high in sodium, magnesium and sulphur. Naturally, it is effervescent. Other waters in Germany are Gerolsteiner Sprudel and Fashingen.

BADOIT (St Galmier France) – low in minerals, contains calcium, magnesium and fluoride. Naturally, effervescent (carbonated)

CONTREXEVILLE (France) - A still water that is high in calcium and magnesium and low in sodium.

EVIAN (France) - Still water, with a moderate mineral content and is almost sodium-free. It tastes fresh and is one of the most popular mineral waters.

PERRIER (France) - Best natural effervescence. Known for over 2000 years. It has a light mineral content.

SAN PELLEGRINO (Italy) – high in calcium, magnesium, chlorine and sodium has added carbonation to make it shine.

VICHY CELESTINS (France) - The water is salty, and not very bright, with a high content of potassium and calcium.

VITTEL (FRANCE) - still water, from three different sources, each with a different mineral content.

Mineral waters are produced in many different countries, including the following examples

BELGIUM Bru (Chevron) Spa Reine (Liège) Barisart.

CZECHOSLOVAKIA Mattoni.

SWEDEN

Ramlösa. Italy

Fiuggi.

United Kingdom, Abbey Bueno, Ashbourne, Brecon, Buxton, Harrogate, Highland Spring and Malvern.

USA: Caddo Valley and Mountain Valley (both Arkansas), Saratoga Vichy (New York),

Poland Water (Maine).

As indicated, the list is long and there are many more. Why not a list of those that are available in your country, if you can, take a look at the label to see the mineral content and whether it is sparkling or still and try to find out if it is natural or man-made?

SEVERAL

There are several products that do not fit into the above categories, for example,

NON-ALCOHOLIC WINE

This is the wine from which the alcohol has been removed. It is bottled to look like regular wine and is available in a variety of styles, such as red, white, or pink, sparkling or sparkling, sweet, medium or dry, etc.

NON-ALCOHOLIC BEER

As for the wine, the alcohol has been removed, they are usually of the 'beer' or the 'lager' type.

CIDER WITHOUT ALCOHOL

It is also produced by removing alcohol, usually by a form of distillation. The above three are also available in the low-alcohol type and in some countries, both non-alcoholic and low-alcohol products command a larger market share.

TASKS

Take a look at the non-alcoholic products you have on your bar and:-

(A) Make a list.

(B) Try to put them in a classification like we have already done.

NOTES:

This image shows a full page of white paper with horizontal black ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.

I.B.A. INDUCTION PROGRAM GLOSSARY OF TERMS USED

APPERITIF - A drink taken before a meal in order to stimulate the appetite.

AROMATIZES – to flavor the wine by adding different botanicals in order to give the product a particular flavor.

BLOOM – a film or what appears to be a gray/white powder on the surface or skins of the fruit. It is a mixture of bacteria and yeasts necessary to cause natural fermentation.

BOTANICALS - A mixture of plants used to produce flavors given in the production of a variety of alcoholic beverages. It can be part of roots, bark, seeds, etc

CO₂ – the symbol for gaseous carbon dioxide, formed during the fermentation process.

CONGENERS / CONGENERICS - The elements that remain in the spirits contribute to the flavor and character of the finished spirit.

LIQUEURS - Liqueurs are sometimes referred to as LIQUEURS in the U.S. The term is also used elsewhere to describe a concentrated form of fruit syrup.

DIASTASE – An enzyme available in cereals, when activated breaks down starches into simple sugars.

DIGESTIVE - A drink taken in order to aid the digestion of food.

DISTILLATION - The process by which most spirits are made, by separating alcohol from water and other materials by heating in a still.

EDV – Short for Eau-de-vie, an unscented fruit-based spirit, which literally means water of life.

FERMENT - The action of yeasts on sugars to produce alcohol. **ARDENT (NESS)** - The hardness evident in young immature spirits.

STRENGTHEN – Strengthen a wine by adding a grape brandy usually.

GENERIC - A term used to describe belonging to a group of names, rather than a specific or individual brand.

GERMINATE - Allow grain to start the reproductive cycle, as in barley, for example.

KEG (KEG) - A beer distribution system, which involves pressing a container in order to force the beer from it to the point of dispensing.

MACERATE – For steep or soaking, usually refers to vegetable or fruit products soaked in order to extract their flavors.

MALTED BARLEY - partially sprouted barley, used due to its high diastase content and flavor.

MASH - A mixture of cereals and water (at a certain temperature) in a vat of puree, in order to convert starches into fermentable sugars.

MASH TUN - A piece of equipment used in the production of cereal-based alcohols in order to convert starches into sugars and aid in the separation of solid materials from the sugary liquid produced.

MATURATION - the complex natural aging process of a product in order to ensure a smooth, smooth taste.

SOFTENED - A wine or spirit that has lost its initial hardness. **MINORS** - A

person under the minimum age established by law.

PATENT/COFFEY/CONTINUOUS STILL – A highly efficient method of producing spirits with a high alcohol content, but usually with little character or flavor.

PEATH-URF: A fuel used in Scotland and Ireland to flavour malted barley during its drying process in whisky-making. It is made up of heater and compressed grasses formed millions of years ago.

POT STILL: used to produce alcohol that retains certain characteristics of the original material used as a base.

STRAIGHT: When applied to bourbon or rye, it indicates that not only is the whiskey aged properly according to standards, but that there must be a minimum of 51% rye or corn alcohol in the product.

TANNIN - The element in particular wine that helps to protect, but also causes hardness in young wines, it also helps to throw away deposits when the wine is ripening.

VINTAGE - A term used to indicate either that a wine is the product of a particular year or just to indicate the time of harvest.

MOSTO – The name given to the sugary liquid product of mash tun (see maceration).

YEAST – Living organism necessary to cause alcoholic fermentation and thus produce alcohol.
